A Global Sourcing & Inventory Management Company

welcome

Specialty Resources Inc. is a global sourcing and inventory management company for precision components & specialty products. SRI can supply: precision machined components, stampings, bearings, castings & forgings, cold headed, electrical components, rubber & plastics, seals & gaskets, springs, fabrications, fasteners and more.

creating the difference

Our domestic and global partners allow us to source and supply our customers with quality products at competitive prices.

- Quick RFQ Response
- Global Sourcing
- Your Standard and Specialty Products on our shelf
- Eliminate Long Lead-Times
- Diversified Manufacturing Methods to assist in Supplier Consolidation

Quality is our #1 priority at SRI. When working with us, you will quickly learn quality is what separates us from our competitors. Specialty Resources, Inc. will strive to meet and exceed all customer requirements and expectations while providing on-time delivery of defect-free specialty parts.

Teamwork, training and prevention-oriented techniques are applied across all possible aspects of our company operation keeping with SRI's commitment to continuing education.

quality

quality

receiving inspection

Every lot of imported product is verified by an independent A2LA lab to ensure all material criteria are met.

Every lot received is sample inspected to MIL-STD-105E, AQLS 2.5. Critical dimensions and characteristics are sample inspected to an AQLS of 1.0.

Gauges are maintained to NIST standards and sent out for certification on a routine basis.

Inspection turnaround is managed with electronic reports published and circulated each evening.

quality assurance

Customer prints and specification are reviewed for completeness, critical characteristics and to confirm the required gauges are available. All customer prints are controlled and maintained electronically on the company network.

Scheduled process audits conducted include the following areas: Purchasing, Quality, Sales, Shipping, Receiving, Kitting, Packaging and the Management System.

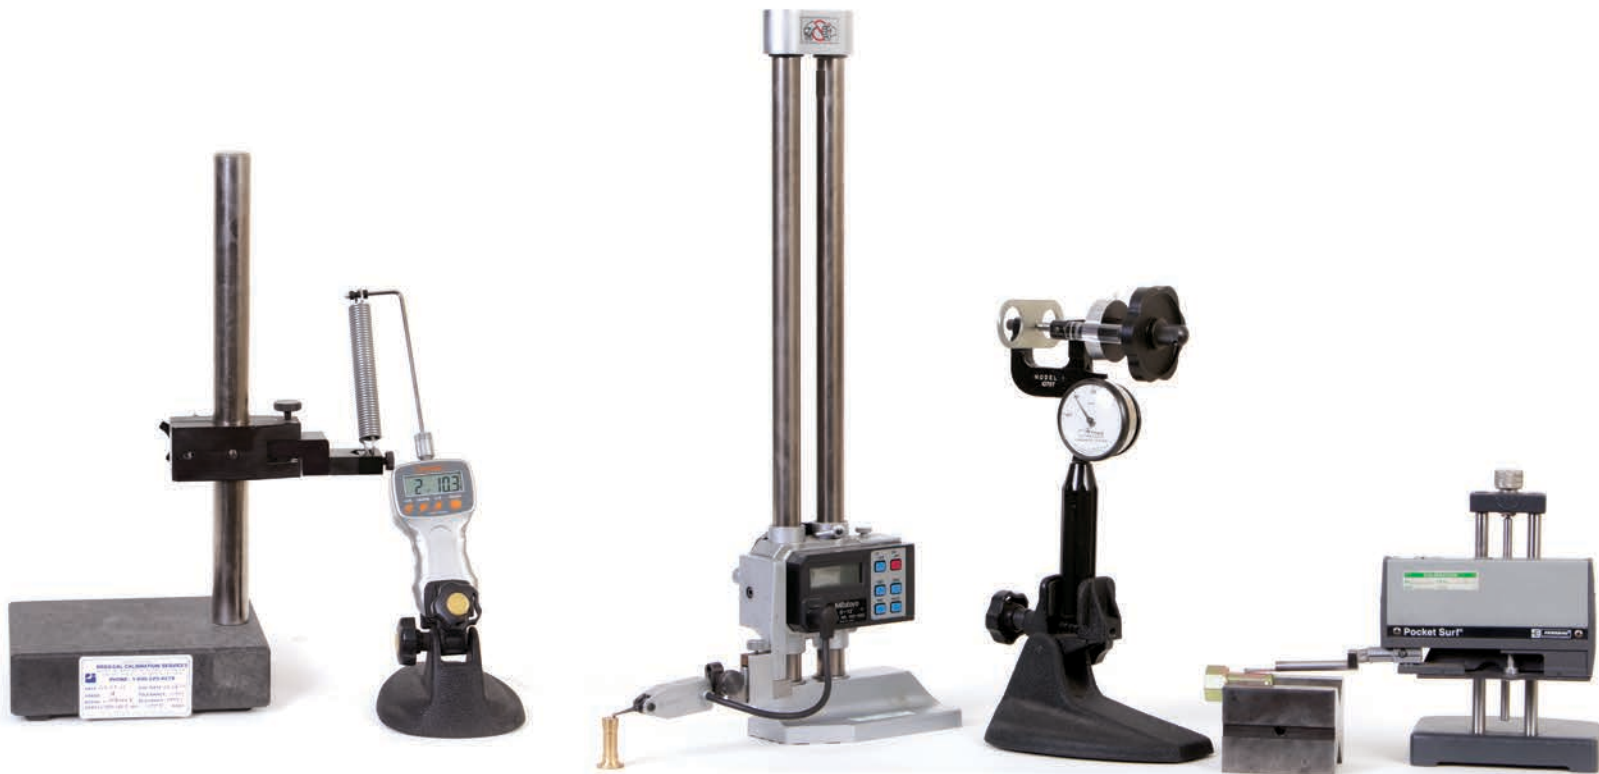

quality

quality

quality assurance

During the sample approval process, parts are inspected and tested as required by the print and applicable specifications. Other methods of supplier evaluation and development include self-assessment audits, supplier requirement packets and site visits.

All quality data is stored in our Quality Management System Access database. Records such as, customer specification reviews, approved supplier data, first article inspections and approvals, utilizing PPAP approval process, discrepant material review, and corrective actions are readily available for review in various reporting formats. Metrics for OTD, PPM, and Customer Satisfaction are posted and discussed at Management Review meetings.

SRI's one-stop source model has been proven to be effective for a wide-range of industries with our global partners and commitment to customer service. A large base of customers rely on SRI for worry free global sourcing and inventory management.

assembly kitting packaging inventory management

Specialty Resources, Inc. is equipped to ensure prompt shipment of all your parts and products by providing sourcing, yearly quantities purchasing, and inventory . We are your one-stop service provider.

assembly

SRI can handle even the most complex assembly requests, using components supplied by our customers or using our global sourcing expertise to supply all parts at the lowest possible cost.

kitting

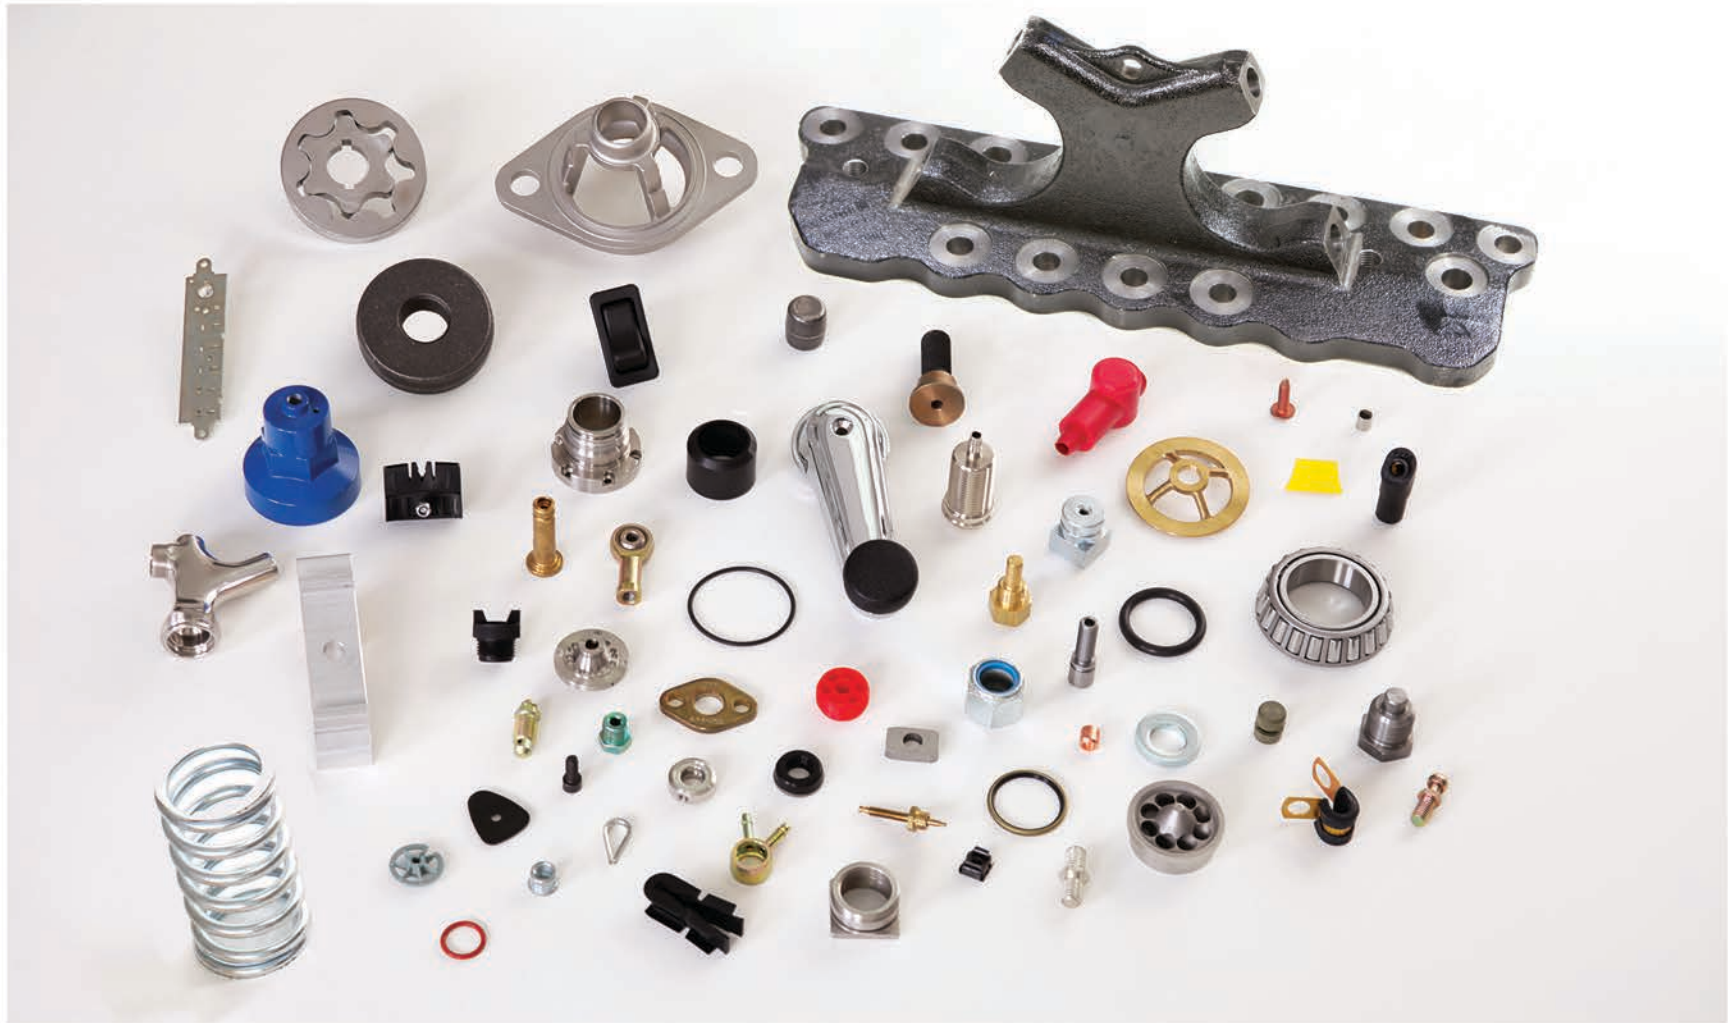

Stock kits are assembled in one run from mass produced components and are held in inventory, allowing us to offer the quickest order process response time. All kits are audited throughout the entire process to ensure the delivery of quality and defect-free kits.

packaging

We are able to provide specialized packaging options ie clam shell, skin packaging, and POS packaging to provide your company with the professional representation you deserve. All packages are bar-coded to your needs to ensure information is transferred accurately.

inventory management

Whether you have products that SRI has assembled in preparation for your use, it will always be on our shelf for your immediate release. Our proprietary inventory software allows us to provide detailed information regarding your product to ensure inventory levels are maintained at healthy levels in case of unforeseen usage increases.

products

Specialty Resources Inc. has over 25+ years of experience sourcing and managing a variety of parts and products. Our knowledge of the production process enables us to guide our clients to the products, materials and manufacturing processes that best match their needs and budgets.

precision machined components

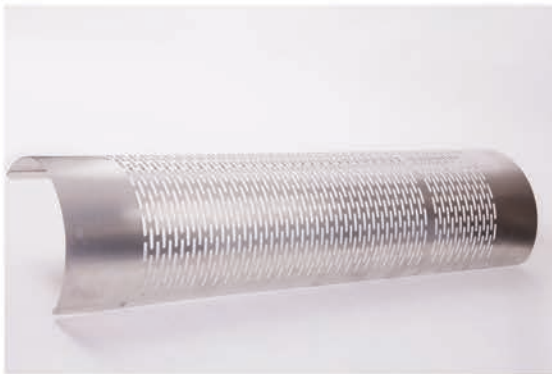

Our certified machining facilities can create your specialized, high-tolerance product in brass, steel, aluminum, or any exotic material you request. SRI has supplied machined components to the leaders of various industries for decades. We have perfected our network of machining suppliers throughout the world over the past 29 years and pride ourselves on the long-lasting relationships we have with world-class suppliers.

stampings

Stamping machines use a variety of methods such as blanking, embossing, bending, flanging, and coining to create desired shapes. Whether a single-stage or multi-stage process is needed, our network of manufacturers and engineers can produce the product you need.

fabrications

SRI sources fabrications in a variety of gauges made from many different types of metal, including aluminum, brass, copper, steel, tin, nickel and titanium. We provide you with a finished product, tailored to your blueprints.

SRI's world class suppliers are capable of producing your rubber product to your blueprint requirements. We have certified suppliers that are committed to producing the best quality rubber product out of common or specialized material. We have Injection Molding, Die-Cutting and Lathe-Cutting methods to provide you the highest quality part at the lowest possible price.

As with all SRI certified manufacturers, our plastics manufacturers are the best in the industry. We have the capability to produce miniature injection moldings as well as very large blow-moldings and everything in between. Our suppliers use the newest technology available to ensure that your part arrives per print each and every time.

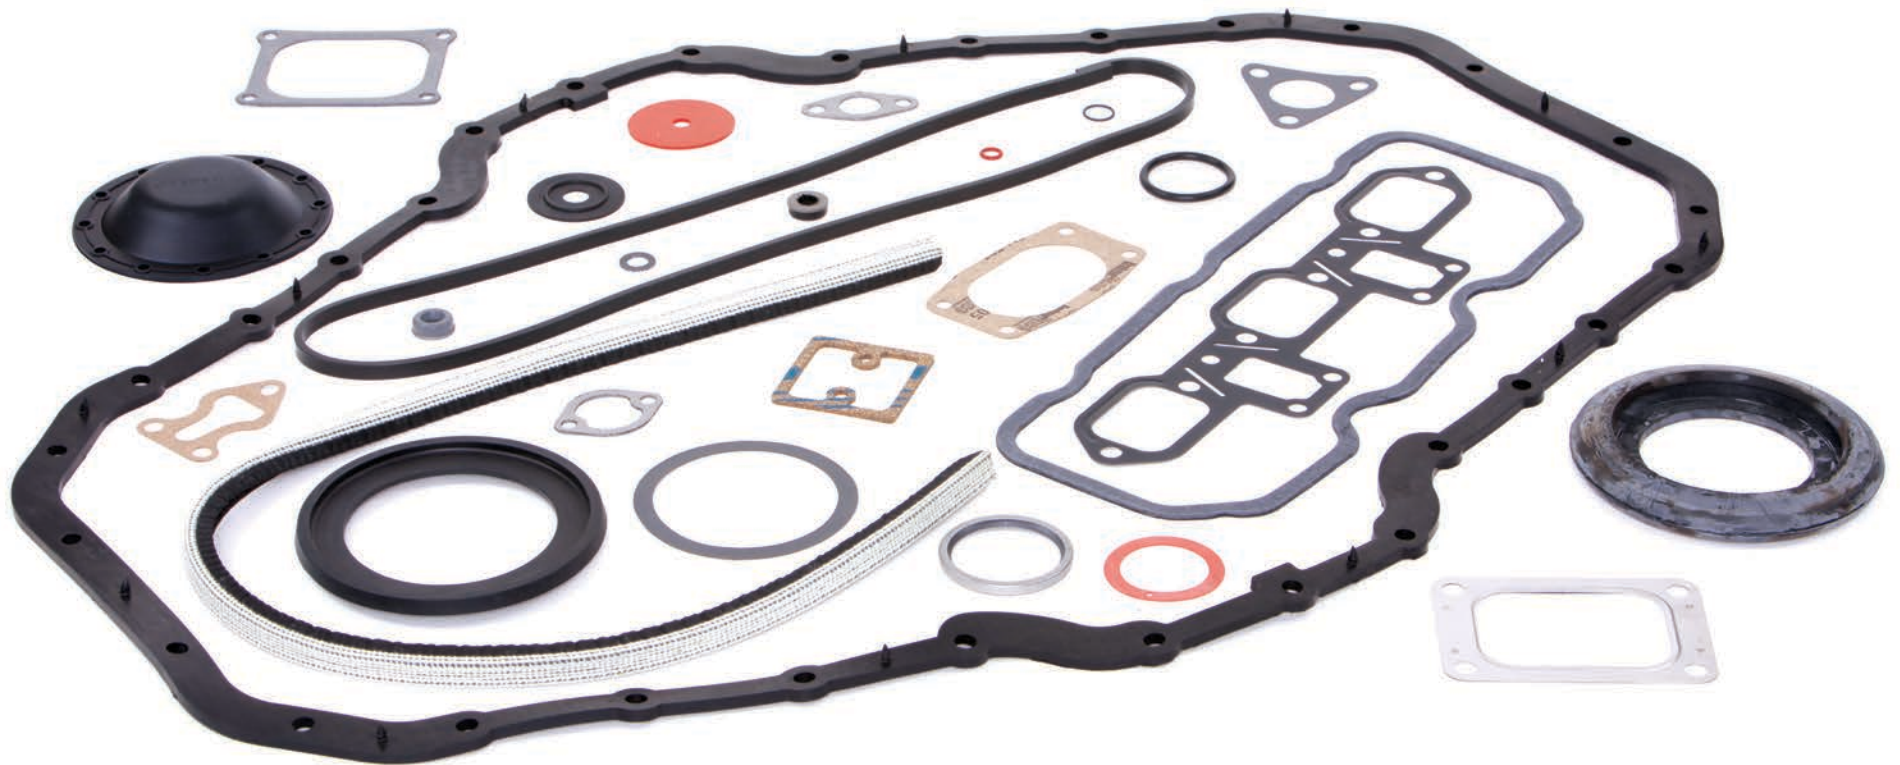

rubber & plastics

seals & gaskets

Mechanical seals prevent leakage while joining systems or mechanisms together. They can also maintain pressure or prevent contamination.

Gaskets are a type of seal that fills the space between two surfaces, preventing leakage, and can often fill the gap between two mating surfaces that have minor irregularities. Gaskets are commonly made from gasket cellulose, rubber, silicone, metal, cork, felt, neoprene, nitrile rubber, fiberglass, or a plastic polymer.

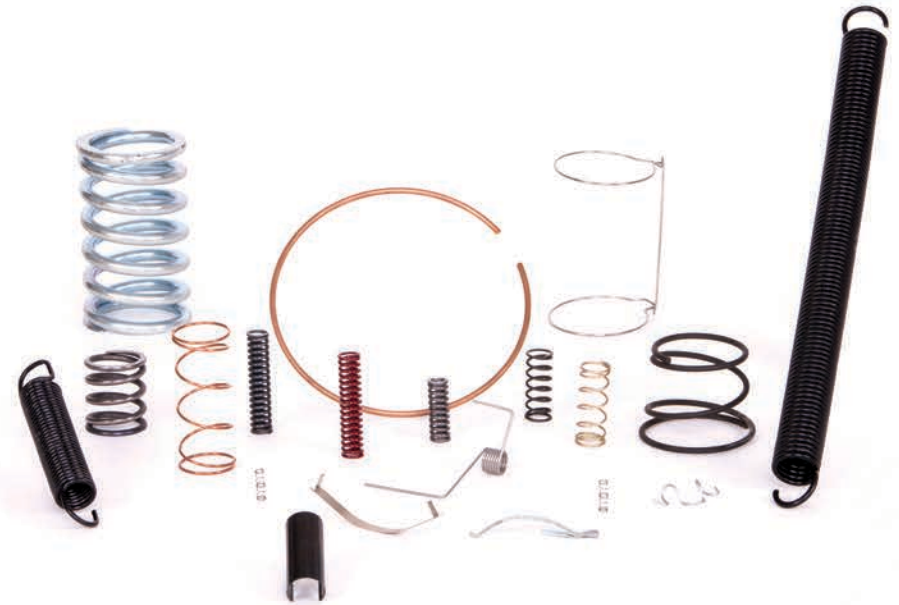

springs & electrical

Whether you are in need of emergency lighting components, transformer components, couplers, switches or any other electrical component, SRI can help you get the high-quality product you need at competitive prices.

Springs are used in products across many different industries. Springs are often made from hardened steel, but some non-ferrous metals are also used including phosphor bronze and titanium to resist corrosion.

cold headed & fasteners

Cold heading creates strong products because the material's grain is preserved. Materials include steel, stainless steel, copper, aluminum, brass, and more. We partner with various suppliers so that we can provide you with fasteners made from any type of material. Miniature to very large, standard to special, plain or finished, we have the capability to provide any fastener you request.
