

PAXMAN'S ANGLING CLUB

OVERVIEW

Paxman's Angling Club has created this risk assessment and will distribute by means of a Facebook post to the group page, and permanent posting to the club website, to ensure as the health and safety of its members as far as is reasonably practicable.

This Risk Assessment was prepared by **Jack Davison (Chairman & Fisheries Officer)** and **Steve Cook (Treasurer & Assistant Fisheries Officer)**. The committee have reviewed this risk assessment and approved its suitability for distribution to club members as of **06/09/2021**. This risk assessment shall be reviewed annually, or if there are changes to the activity assessed.

RISK ASSESSMENT

Activity	Who is at Risk?	What is the Hazard?	Control Measures?	Follow Up Required?
Use of Hand Tools	Member(s)	Impact injury to Eye and/or Body	<ul style="list-style-type: none"> - Ensure operative is competent in the use of the specific hand tool. - Select the correct hand tool for the task. - Use any handheld tool correctly and always inspect before use. - Do not operate equipment out of its design parameters. - Ensure enough room in all directions to swing tool (ie: hammer) and that no one is in the vicinity of the swung arc – mark off an area behind you. - Keep body away from tool / equipment interaction area especially as tool breaks through material. - For most hand tool works EN166 1F safety glasses are recommended as a minimum. 	N/A
Use of Hand Tools	Member(s)	Slip Trip and Falls	<ul style="list-style-type: none"> - Ensure that all hand tools are placed in a safe area when not been used. - If using hand tools at height, they must be secured to the operator or equipment being used to prevent them falling. 	N/A

Continued....

PAXMAN'S ANGLING CLUB

Use of Hand Tools	Member(s)	Cuts and Abrasions	<ul style="list-style-type: none"> - Cover all exposed sharp hand tool bits or blades immediately on completion of use and ensure any exposed sharp edges on material from the use of hand tool are smoothed or covered. - Do not undertake any other task while still holding hand tool. - Any cuts with hand tool to be made away from the body. 	N/A
Use of Hand Tools	Member(s)	Damage to property services. Gas, water and Electrical.	<ul style="list-style-type: none"> - Not applicable at time of assessment, a specific risk assessment should be carried out for any future works that pose these hazards. 	N/A

RISK ASSESSMENT – FISHERIES MAINTENANCE

<p>General Manual Handling</p>	<p>Member(s)</p>	<p>Abrasions Cuts Strains / Sprains Crushes Muscular Skeletal Fracture/Break Concussion Contusion Damage to Load Damage to Property Injury to 3rd Party</p>	<p><u>Where possible:</u></p> <ul style="list-style-type: none"> - Eliminate the need for manually handling completely. - Use suitable and sufficient mechanical aids to transport load. - Reduce distance of travel. - Reduce load weight and size. - Increase number of persons lifting (one person to take charge of the operation). <p><u>Task:</u></p> <ul style="list-style-type: none"> - Inspect route of travel, is it excessive, greater than 10m, if so incorporate rest break. - Keep load close into the body – Move any restrictions that keep handler away from the load. - Reduce stress to lower back - Do not twist while holding load. - Do not stoop or bend - To lift load bend at knees. - Reduce the height the load has to be lifted too – heavy items to be stacked near floor. - Keep pushing or pulling of load to a minimum - Keep extremities clear of obstructions reducing entrapment. - Precise positioning may require the operative to be in a more awkward position, use additional person to assist. <p><u>Load:</u></p> <ul style="list-style-type: none"> - Where possible heavy loads are to be kept to a minimum or reduced in overall weight. HSE guidance on max loads to be lifted per person states; Man = 25kg Woman = 20kg. - Is the load bulky / unwieldy – Seek assistance. - If handler cannot see route of travel or load larger than 750mm square – Seek assistance. - Is the load difficult to grasp due to no handles, sharp, slippery, rounded – wear gloves to aid grip. - Ensure the load will not shift or move inside its packaging. - If the load is unevenly distributed – Lift with heavier side to body. <p><u>Good Manual Handling Techniques Guide:</u></p> <ul style="list-style-type: none"> - Think before handling - Plan lift / access load. - Adopt a stable position – feet apart. - Bend at knees – slight bend of back may be required. - Take good hold of load. - Lift using leg muscles. - Keep load close to body. - Avoid twisting and leaning. - Keep head up. - Move smoothly. - Do not lift beyond personal means. - Put load down then adjust position. 	<p>N/A</p>
--------------------------------	------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------

In all cases, members use the waters associated with Paxman's Angling Club at their own risk. This control measures detailed in this risk assessment are intended to be the guidance on the minimum control measures to be applied by club members. Members should satisfy themselves with the hazards present and should notify the club committee should they encounter anything not identified in this risk assessment.
