Helpful tips from our family to yours to keep your greens vibrant, and the scent of balsam in the air!

1. Give your wreath a spritz of water every day / every other day, it is a plant after all! Focus the mist on the twig instead of the needles for better absorption.
2. Don't keep your wreath in direct sunlight all day and expect it to stay forest green! A cool dry environment is best. Although that wreath may look great over the fireplace, the heat will take a real toll!
3. Oxygen – Did you know that a wreath kept outside lasts much longer? Should you want to display the wreath indoors, take time to place it in the shade outside for part of the day to get some fresh air!
