IDShield – Identity Theft Protection
Website: www.idshield.com

IDShield is a comprehensive identity theft protection and restoration service designed to safeguard individuals and families from the growing threat of identity fraud. It provides continuous monitoring of your personal information across credit bureaus, the dark web, public records, and online accounts, alerting you when suspicious activity is detected. IDShield can help protect data points such as Social Security numbers, bank accounts, credit cards, driver's licenses, and more. In addition to monitoring and alerts, IDShield offers full-service identity restoration: if your identity is compromised, licensed private investigators work on your behalf to restore your identity and help repair related damage. Many plans also include credit monitoring, credit score tracking, and consultation on best practices for maintaining digital privacy. IDShield is ideal for clients who want proactive protection, expert support, and peace of mind knowing that their identity is being monitored and that professional help is available if an incident occurs.

Secure by PCRX – Antivirus & Endpoint Protection
Website: www.pcrxcomputers.com

The PCRX Membership service is a managed security and support program that delivers continuous, real-time monitoring of your computers to keep them secure, optimized, and running smoothly. Instead of relying solely on traditional antivirus, PCRX Membership provides an ongoing, proactive layer of protection and maintenance. Systems are monitored for performance issues, security threats, and suspicious behavior, allowing problems to be detected and addressed early—often before the user even notices. The service typically includes real-time alerts, remote troubleshooting, and regular health checks to help prevent infections, crashes, and slowdowns. For clients, this means less downtime, fewer unexpected repair costs, and a trusted team keeping watch over their devices. PCRX Membership fits perfectly into a bundled protection package alongside identity theft protection and data privacy services, giving users a comprehensive and proactive approach to their digital safety.

Optery – Personal Data Removal (Data Broker & People Search Opt-Out)
Website: www.optery.com

Optery is a privacy service that helps individuals remove their personal information from data brokers, people-search sites, and other online databases that collect and sell consumer data. These sites often publish names, addresses, phone numbers, relatives, and other sensitive details, which can be used for unwanted marketing, profiling, or even harassment and fraud. Optery identifies where a person's data is exposed across hundreds of these databases and then submits opt-out and removal requests on their behalf. The service offers ongoing monitoring and recurring opt-outs, since many sites repopulate information over time. Clients receive dashboards and reports showing which sites were found, which are in progress, and which have been successfully removed. By using Optery, clients can significantly reduce their digital footprint, regain control over how their personal information is used online, and complement other security services such as identity theft protection and antivirus for a more complete privacy and security posture.
