

Assessing Your Digital Preparedness

Beyond the Tech:

Mike's Journey to True Digital Preparedness

Mike, the operations manager at a growing engineering firm, was excited about the new project management software his company had invested in. He was sure it would streamline their processes and boost productivity.

However, six months after implementation, Mike was frustrated. Despite the hefty price tag, most employees were still relying on old methods, and the promised efficiency gains hadn't materialized.

Realizing they needed help, Mike's firm engaged AMC Services to conduct a Digital Preparedness Assessment. The results were eye-opening. The assessment revealed that while the company had invested in technology, they

had overlooked crucial aspects like employee training, process integration, and change management.

Armed with these insights, Mike worked with AMC to develop a comprehensive digital readiness plan. This time, when they rolled out new digital tools, the adoption was smooth, and the benefits were immediately apparent.

Mike learned that successful digital transformation isn't just about the technology – it's about ensuring the entire organization is ready to embrace and leverage it.
