

Circulation Solvent R

Titan Enzymes Circulation Solvent R is a plant derived, low toxicity, easily bio-degradable, industrial solvent cleaner that contains zero heavy metals and halogens. This cleaner is used to break down and liquify “hard to clean” commodities like asphalt/tar heal, crude oil, latex and adhesives. Unlike other cleaning products including diesel washes, Circulation Solvent R allows for little to no residue to stick on the side walls of a tank car giving the crew easy collection of the liquified material to be reused for additional cleanings.

Circulation Solvent R is designed to be used at ambient temperatures and does not require or need to be heated, unlike diesel and other solvents. In addition, this cleaner has been field tested at 32F and performed well at these low temperatures. This allows the customer to save energy costs and reduces safety risks. Its water rinseable so applicators can choose to use the product as-is or follow up with a water-based degreaser like Oil Gobbler. Adding Oil Gobbler will reduce the flammability, as citrus derived ingredients have a relatively low flash point. Circulation Solvent R is SNAP certified, has Zero HAP, has Zero ODP, not regulated by NESHAP, RCRA or SARA.
