

AI & Money

Activity: Future Me

Step 1: Design Your Lifestyle

"Act as a Financial Life Planner. I want to imagine my life at age 23. I plan to live in **[City, State]** in a **[Studio Apartment / One-Bedroom / Live with Roommate / Own a Home]**.

My lifestyle priorities include:

1. I want to drive a **[Type of Car]** OR use **[Public Transit]**.
2. I will spend money on **[Hobby], [Hobby], [Hobby], [Hobby], and [Hobby]**.
3. I prefer **[Cooking at Home / Eating Out Often / Meal Prepping]**.

Please generate a Projected Monthly Budget for this lifestyle in this specific city, including estimated costs for Rent, Utilities, Insurance, Food, and Fun."

Step 2: The Reality Check (Income Calculator)

"Based on the budget you just created, how much Annual Salary (before taxes) do I need to earn to afford this comfortably while still saving 10% for my future?"

Also, break that down into a Required Hourly Wage based on a standard 40-hour work week."

Step 3: The Career Matchmaker

"I like the following school subjects: **[Subject]**, **[Subject]**, **[Subject]**, **[Subject]**, and **[Subject]**.

I am interested in working in **[Interest]**, **[Interest]**, or **[Interest]**.

Suggest 3 Potential Career Paths that align with these interests and typically pay the Annual Salary from the previous results. For each career, tell me:

1. The typical Education or Certification required.
2. The Job Outlook (Is this career growing based on today's projections?).
3. One 'Pro-Tip' for someone starting in this field."
