SERVICES AVAILABLE

Vulnerability Management

Non-Intrusive, Wide Focus, Starting point for testing Security, Mix of static and Dynamic Tools.

Penetration Testing

Narrow Focused, Advanced Security Test, Report on Exploits, and Heavy use of security tools.

Remediation

Remediation based on compliance standards and Security postures.

Business Continuity

100% up time

INCAPTION, INC
Networking and Security

VULNERABILITY MANAGEMENT AND PENETRATION TESTING.

Vulnerabilities refer to pathways or system gateways that cyber criminals can use to gain access to the network. When criminals realize the presence of such vulnerabilities in the network, they can exploit them and cause wanton damage to infrastructure, without mentioning the loss of crucial business data as well as network downtime

To help you achieve this, we have a competent penetration test team with vast experience in analyzing and identifying threats that could potentially harm your information assets. Other than testing your network for vulnerabilities and penetrations, the team is also experienced in formulating remediation plans so that you are never caught flat-footed in the case of an Attack
