USING AUGMENTED & VIRTUAL REALITY TO APPEAL TO YOUNGER GENERATIONS

EPISODE 82

How AR/VR Can Elevate Learning Experiences

By Carolyn Heinze (AVTechnology) published March 15, 2021

Michael Carbenia, executive director of career technical education (CTE) at zSpace, actually started out as a customer. Having grown up in the AV industry, Carbenia eventually pursued a career in education; prior to joining zSpace, he was the director of CTE for St. Lucie Public Schools in St. Lucie County, FL.

A Mixed Reality Alternative to Performance Testing

By Michael Carbenia, John Foster & Eamonn Powers

Every company is now a technology company

zSpace is an example of AR/VR that allows educators to do things that would otherwise be:

Dangerous, **I**mpossible, **C**ounterproductive, and/or, **E**xpensive

- Jeremy Bailenson, Ph.D., Director of Stanford University VR Lab

Technology Landscape

Virtual Reality: HMDs

Mixed Reality

Augmented Reality

Virtual Reality (VR)

Characteristics of VR

- Full immersion
- Isolation from surroundings
- Unique experience for each learner
- Delivered with a Head-Mounted Device (HMD)

Augmented Reality (AR)

Characteristics of AR

- Real world augmented with digital content
- Can be a shared experience
- Delivered using a tablet or other similar device and text or code to activate content

How Ford is using Augmentative & Virtual Reality

October 26, 2020 // Marcela De Vivo

Designing cars

In order to create a more efficient and streamlined design process, **Ford has started using Microsoft's augmented reality tech**, HoloLens which can be used for commercial and industrial applications.

Maintenance and Technicians

Ford is also utilizing virtual reality to help with maintenance upkeep in cars and to assist technicians to repair vehicles, especially newer models that require more and more technological programming to repair.

In a partnership with automotive supplier Robert Bosch, **Ford will provide training for service technicians at dealerships to work on the new Mustang Mach-E electric crossover.**

6 Ways AR and VR Will Rule Construction in 2021

JANUARY 11, 2021 BY JOHN BIGGS

1. Training

Many jobs within construction involve heavy machinery, which can be dangerous without proper training. The obvious catch 22 here is that trainees need to gain experience using the equipment, but it's impractical or unsafe to train them on real equipment. With the margin of error so low in many real-world situations, it'd be best for workers to familiarize themselves with the controls and operation in a safe environment.

2. Remote Maintenance

AR lets workers share what they can see with an off-site expert, effectively allowing the experts to be in multiple places at once. By wearing a headset or a set of augmented reality goggles, workers in the field can get live guidance from technicians who are better equipped to identify problems when they can look through the worker's eyes.

3. Design

4. Socially Distanced Jobsites

5. Attracting New Talent

Construction's skilled labor shortage is a well-documented fact. Seasoned industry veterans are retiring at a faster pace than young workers are stepping up to replace them. The industry is hoping to lure digitally native young workers with new technology. Young people today were practically born with a smart device in their hands, so they're more comfortable even with advanced technology than any previous generations.

6. Virtual Collaboration

Insulated Roof - Free Play

Construction Fundamentals

CONSTRUCTION COMPETENCIES EXAMPLES

- Demonstrate the importance of health, safety and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- Investigate the construction industry and explore related occupations.
- Select and use basic hand tools.
- Select and use power tools and describe their proper operation.
- Demonstrate mathematics knowledge and skills relevant to the construction industry.
- Read and interpret construction drawings.
- Frame floor systems based on drawing and specification requirements.
- Frame walls and ceilings based on drawing and specification requirements.
- Frame a roof based on drawing and specification requirements.

15 HVAC MODULES

- **HVAC Fundamentals**
 - Vapor Compression Cycle
 - Pressure and Measurements
 - Heat, Temperature and Measurements
- **HVAC Components/System**
 - Reciprocating Hermetic Compressor
 - Evaporator, Air Cooled, Forced Air
 - Condenser, Air Cooled, Forced Air
 - Capillary Tube
 - Thermostatic Expansion Valve (TXV)
 - Filter Drier
 - Receiver
 - Accumulator
- **HVAC Electrical Components and Systems**
 - High-Low Pressure Manual Controls
 - High-Low Pressure Automatic
- **HVAC Residential & Domestic System**
 - Split Air Conditioning
 - Window Air Conditioning
- **Modules contain: Background theory, technical simulations, 3D images and descriptions, Formative assessments**

Learning Elements:

- Background Theory, consisting of the vapor compression cycle theory and supporting sciences.
- Description Parts in 3D, explain of Variate of temperature Chart, Heat and Cold region.
- Technical Simulation, simulated vapor compression cycle showing High/Low Pressure vapor and High/Low Pressure Liquid.
- Formative Assessment, consist 20 questions with final score, Number of Correct and Wrong Answer, Time taken.

Learning Objectives:

- Understand Basic Laws in Refrigeration.
- Understand Refrigeration Process in each main component.
- Understand Vapor Compression Cycle.
- Understand representation of P-H Diagram in vapor compression cycle.

RECIPROCATING HERMETIC COMPRESSOR

Learning Elements:

- Background Theory, consisting of the Reciprocating Hermetic Compressor theory and supporting sciences.
- Description Parts in 3D, showing detail components of Hermetic Compressor with explode and combine features.
- Technical Simulations, 3D Simulation on how hermetic compressor work.
- Formative Assessment, consist 20 questions with final score, Number of Correct and Wrong Answer, Time taken.

Learning Objectives:

- Familiarization with refrigerant compressors.
- Identification of parts and components in reciprocating hermetic compressor.
- Understand construction of reciprocating hermetic compressor.
- Understand working principles of reciprocating hermetic compressor.

EVAPORATOR, AIR COOLED, FORCED AIR

Learning Elements:

- Background Theory, consisting of the Evaporator, Air cooled, Forced Air theory and supporting sciences.
- Description Parts in 3D, showing detail components of Evaporator in 3D model with the description.
- Technical Simulations, 3D simulation on how Evaporator work.
- Formative Assessment, consist 20 questions with final score, Number of Correct and Wrong Answer, Time taken.

Learning Objectives:

Introduction of Evaporator

- Double-Pipe Coolers
- Baudelot Coolers
- Tank-Type Cooler
- Shell-and-Coil Coolers
- Shell-and-Tube Chillers
- Direct and Indirect Systems

Evaporator Components

- Evaporator Coil
- Fin
- Distributor
- Evaporator Inlet
- Evaporator Outlet
- Evaporator Casing

How to Navigate a Course

LABTECH

RECIPROCATING HERMETIC COMPRESSOR

Background Theory

Reciprocating Hermetic Compressor

This type of refrigeration compressor mainly includes reciprocating, scroll, screw and rotary compressors.

The only type of non-positive displacement refrigeration compressor widely used in refrigeration systems is the centrifugal compressor. In a centrifugal compressor, the increase of the pressure of the vapor refrigerant depends mainly on the conversion of dynamic pressure to static pressure. Centrifugal compressors have no means to prevent the reversal of flow. The fluid is subject to flow processes and the work is transferred by virtue of the change of momentum of a stream of fluid flowing at a high speed over blades or vanes attached to a rotor.

Open-type, Hermetic and semi hermetic compressor

Two styles of construction of compressors are open and hermetically sealed. In the open-type compressor, the shaft extends out of the compressor and is connected externally to the electric motor, which drives the compressor.

LABTECH 2

Reciprocating Hermetic Compressor

An open compressor needs shaft seals to minimize refrigerant leakage. An open compressor does not need to evaporate the liquid refrigerant to cool the hermetic motor windings.

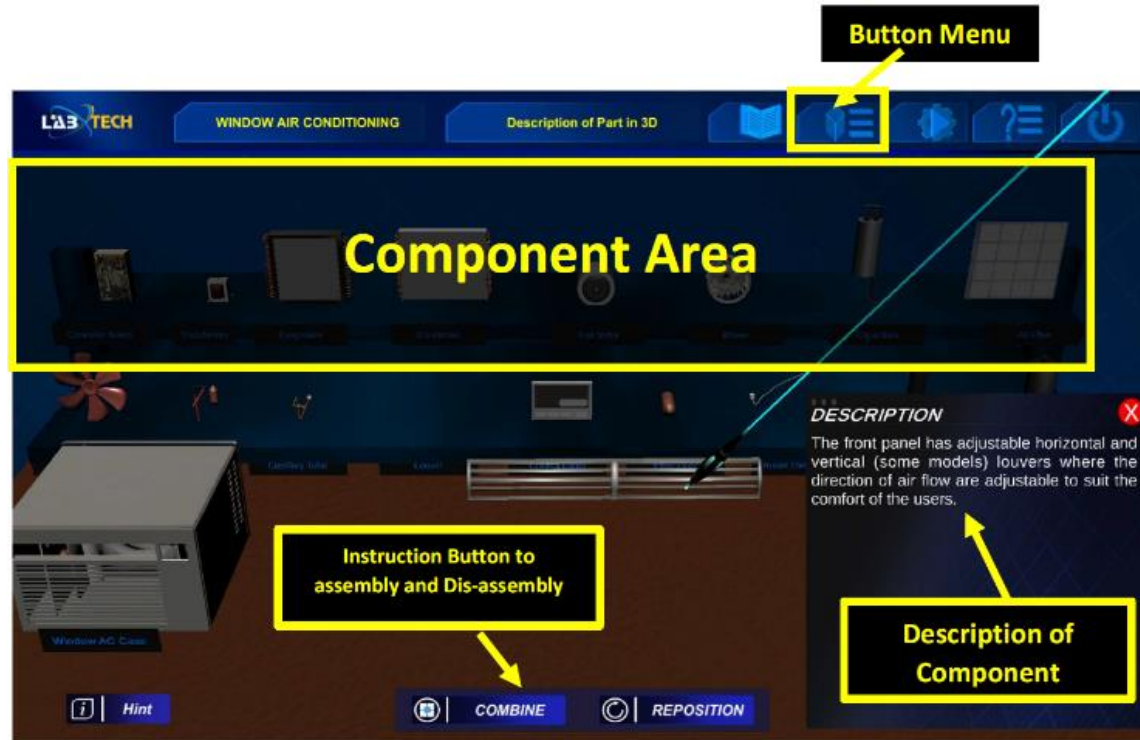

LABTECH 3

Figure 1. Open type compressor driven by motor through two V belts.

Simulation of how System work

Description of Simulation

Room Temperature
When outdoor unit stops, room temperature increase again and the controller starts the outdoor unit to bring temperature back to the setting temperature.

27°C

26°C

TEMP

FAN SPEED
1 2 3 OFF

DESCRIPTION
Window air conditioning system uses a thermistor as room sensor for controlling the room temperature that placed on the evaporator air inlet, it senses the return air. When the return air has reached the temperature setting, air thermistor will send signal to controller for controlling compressor.

Particles Indoor
Cooler
Warmer

Particles Outdoor
Ambient Air
High Temperature Ambient Air

Room Temperature
The current room temperature is 30 °C, the room temperature will increase or decrease according to the temperature setting.

30°C
