## DDOS Attacks

Although criminals conducting a DDOS attack may not steal your information, they can crash your website render networks useless.

### What is a DDOS attack?

DDOS stands for distributed denial-of-service. A DDOS attack disrupts the internet traffic to targeted websites to cause them to crash.

### Who are the perpetrators?

Many are very easy to plan and execute. Criminals can hire illegal companies to send these attacks from anywhere in the world.

### How prevalent is hacking?

According to the Hartford Steam Boiler Inspection & Insurance Co., 35% of surveyed companies were attacked in the 12 prior months.\*

### How bad is it?

DDOS attacks have resulted in monetary losses ranging from \$52,000 to \$444,000 and cause widespread disruption of vital programming.\*

### What can we do to protect our schools and municipalities?

Use good virus protection and monitor your network against strange Internet behavior. Always have a response plan in place.
