

Cyber Threats to Schools & Municipalities

SERVICES AVAILABLE

Dellicker Strategies has solutions & services to help public organizations get their cybersecurity under control.

ESSENTIALS PACKAGE

- Security awareness training
- Network vulnerability scan
- Incident response retainer
- Program development

SUSTAINMENT PACKAGE

- Essentials Package plus:
- Additional training seats
- 2nd vulnerability scan
- More tech & program support

SUSTAINMENT PACKAGE

- Sustainment Package plus:
- Penetration testing
- Advanced anti-malware/anti-virus endpoint protection
- Additional technical capabilities

Dellicker's delivery partners include Candoris Technologies, TierPoint and KnowBe4.

PHISHING

Earlier this year, just one fraudulent email gave hackers enough information to steal \$2.3 million from a school district in Texas. Proper training could have stopped that attack, and can help your district, too.

What is phishing?

Phishing is a strategy used to obtain sensitive information through online trickery. Criminals use bulk emails to masquerade as reputable authorities, fooling people into giving up data or clicking on dangerous links. They work by gaining people's trust and using it against them.

Who are the perpetrators?

Criminals from the USA, China, Russia, and many more nations are engaged in phishing. It is a cheap and easy way to commit cybercrime.

How bad is it?

Phishing can steal personal and payment information to forge bank documents or take out fraudulent loans. Often, it sets up "ransomware" attacks that demand money for unlocking compromised files.

What can we do to protect our schools and municipalities?

Learn about common phishing tactics. If you come across a potential phishing email, report it to your IT department. Never send passwords or bank information over email.
