Dellicker STRATEGIES

Cyber Threats to Schools & Municipalities

SERVICES

Dellicker Strategies has solutions & services to help public organizations get their cybersecurity under control.

ESSENTIALS PACKAGE

- Security awareness training
- Network vulnerability scanning
- Cybersecurity program development & launch

SUSTAINMENT PACKAGE

- Essentials Package plus:
- Program Dashboard
- Additional training capabilities
- Technical and program support

COMPREHENSIVE PACKAGE

- Sustainment Package plus:
- Penetration testing or
- Customized services for continuous cybersecurity program improvement

Dellicker's cybersecurity delivery partners include KnowBe4 & ETHOS Technology

AI-CyberAttacks

Schools and municipalities need to understand how AI is changing cyberattacks so they can recognize threats and protect information.

What are AI-Cyberattacks?

AI cyberattacks use artificial intelligence to make cybercriminal activities faster, more convincing, and harder to detect. Attackers can use AI for phishing, ransomware and in gaining unauthorized systems.

Who are the perpetrators?

The prepatrors of these attacks are cybercrimals, ransomware gangs, nation state actors and low skill actors.

How prevalent is spyware?

AI-related cyber incidents are becoming an important concern for schools. 41% of surveyed schools in the U.S and U.K reported experiencing Ai-related incidents. The FBI also recorded 22,364 complaint involving AI in 2025 with nearly $893 million in reported losses.

How bad is it?

AI is becoming a very dangerous tool, with examples of it being used to attacks governments: hackers used AI to spy on Thailands government.

What can we do to protect our schools and municipalities?

Schools can protect themselves by using MFA, keeping systems updated, and training staff and students to recognize AI threats.
