

Cyber Threats to Schools & Municipalities

SERVICES AVAILABLE

Dellicker Strategies has solutions & services to help public organizations get their cybersecurity under control.

ESSENTIALS PACKAGE

- Security awareness training
- Network vulnerability scanning
- Cybersecurity program development & launch

SUSTAINMENT PACKAGE

- Essentials Package plus:
- Program Dashboard
- Additional training capabilities
- Technical and program support

COMPREHENSIVE PACKAGE

- Sustainment Package plus:
- Penetration testing or
- Customized services for continuous cybersecurity program improvement

Dellicker's delivery partners include KnowBe4, Ethos Security, and Splashwire.

AI CYBERATTACKS

AI-powered cyberattacks are escalating, with significant surges in phishing and deepfake fraud. Schools and municipalities need to be prepared.

What are AI Cyberattacks?

AI-powered cyberattacks use artificial intelligence to create faster-executing and more sophisticated and exploitations against unsuspecting victims.

Can you give me an example?

Deepfakes are fake videos or audio transmissions that appear to be real. They are highly deceptive, with low identification rates, and very effective at being used for exploitation.

How prevalent are AI-Powered Cyberattacks?

The prevalence is growing fast. Financial losses from deepfake frauds have reached almost \$1 billion worldwide, with averages losses in the \$ millions.

Who is affected?

Every sector of the economy is vulnerable. Manufacturing has been hit hard in recent years. The K-12 and municipal markets are also common targets.

What can we do to protect our schools and municipalities?

Practical steps involve using multi-factor authentication, anti-phishing training, zero trust policies, aggressive software patching, and data security.

Sources: IBM, Cost of a Data Breach Report 2025, 2025, IBM BDR

Surfshark, 2025, Deepfake fraud caused financial losses nearing \$900 million
