Dellicker STRATEGIES

Cyber Threats to Schools & Municipalities

SERVICES

Dellicker Strategies has solutions & services to help public organizations get their cybersecurity under control.

ESSENTIALS PACKAGE

- Security awareness training
- Network vulnerability scanning
- Cybersecurity program development & launch

SUSTAINMENT PACKAGE

- Essentials Package plus:
- Program Dashboard
- Additional training capabilities
- Technical and program support

COMPREHENSIVE PACKAGE

- Sustainment Package plus:
- Penetration testing or
- Customized services for continuous cybersecurity program improvement

Dellicker's cybersecurity delivery partners include KnowBe4 & ETHOS Technology

RANSOMWARE

Understanding ransomware is the first step toward protecting your organization from costly disruptions, data loss, and security breaches.

What is ransomware?

Ransomware is a dangerous form of malicious software that locks organizational data and systems until a ransom is paid, causing major disruptions and financial losses.

Who are the perpetrators?

External threat actors, organized crime, and opportunistic hackers tend to launch these financially motivated attacks against organizations of all sizes.

How prevalent is spyware?

Ransomware accounts for 48% of all confirmed data breaches, especially targeting sectors such as education, healthcare, and finance.

How bad is it?

Attacks result in a 50% data encryption and an average cost of $1.2 million per incident, including recovery and fines. Additionally, they frequently cause severe public sector disruptions.

What can we do to protect our schools and municipalities?

Organizations can protect themselves by isolating offline data backups, enforcing multi-factor authentication, and patching systems regularly. Organizations should also segment networks and utilize available state and federal resources.
