

Natural materials

The human desires to be closer to Nature. BEMOSS® brand is dedicated to creating unique living spaces of fulfilling peace. Our vision is to bring a natural moss from the Northern Arctic area with clean air and water into our indoor life.

## Natural

Hand-harvested in European forests, these mosses of best quality will bring you a green lifestyle to your space.

## Maintenance-free

All our products are completely maintenance free and they don't require any watering.

## Absorbs moisture

Moss helps to stabilize a room's moisture levels whether the room is too humid or is too dry.

## Acoustic

Noise pollution especially in working places results in poor concentration, increased stress, discomfort... The solution is to reduce this ambient noise for the benefit of a healthy environment. Our products at BE-MOSS are specifically designed to absorb sound, the natural way.

## Ecological

Moss harvesting is done the most ecological way possible. Moss being hand-picked to recyclable wooden crates. Moss being harvested especially in the areas with high risks of wildland fire to avoid fire spread.

## Well-being & stress relief

BEMOSS walls use biophilic design to bring nature to you. This design method has been shown by several studies to decrease stress and anxiety, and increase productivity.

Years of experience in working with all types of moss and plants, our own stabilization process, vocational education, training and a large number of implementations not only in America but also all over the world, it helps us to be able to make a moss wall or pictures of moss exactly according to your requirements.

A professionally trained team member will be happy to answer all your questions about moss, stabilized plants or the installation of such walls. Moss is a great natural product for use in any interior. It is 100% natural, so it is not only very attractive, but also creates a feeling of well-being. It can be used anywhere (even in places where there is no daylight), is maintenance-free and is a real attraction for your view. There are many possibilities and spaces, whether private or public, where you will definitely find your use and place. In its simplicity is its beauty.

Be surprised by how many opportunities for moss it provides. It is guaranteed to be the best addition to your house, office, shop, showroom or any place.

## FLATMOSS

FLATMOSS, commonly called flat or forest moss, is characterized by a more uniform structure more or less without a 3D effect and looks very natural. It can be found in the European forests and is a very important part of the ecosystem, which it helps to regulate humidity. It grows, for example, on rocks and branches and is therefore very resistant.

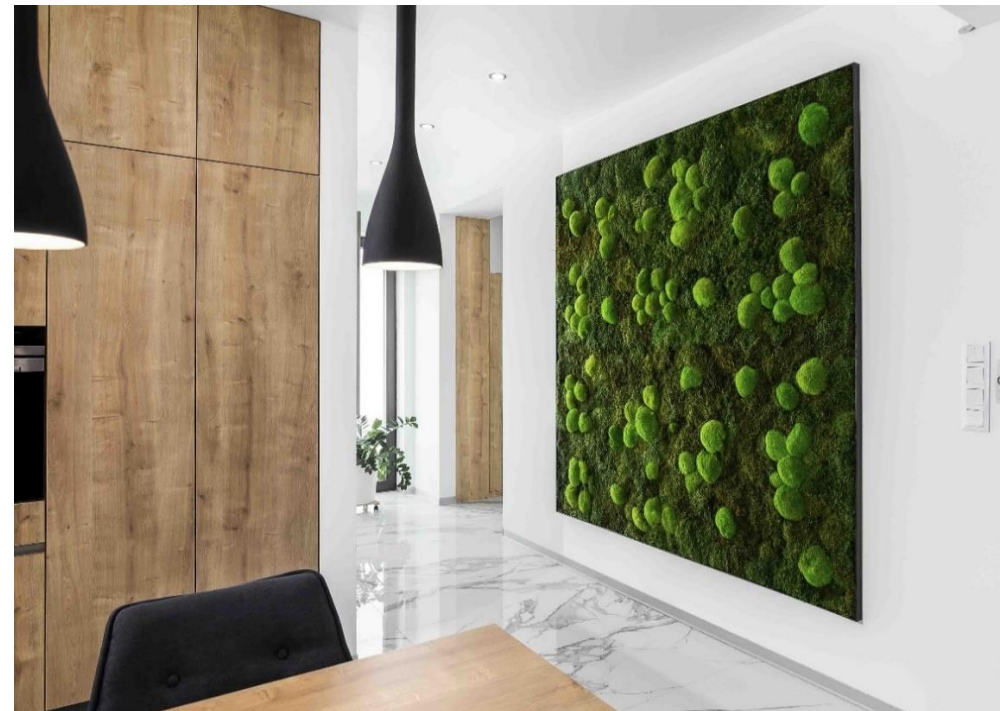

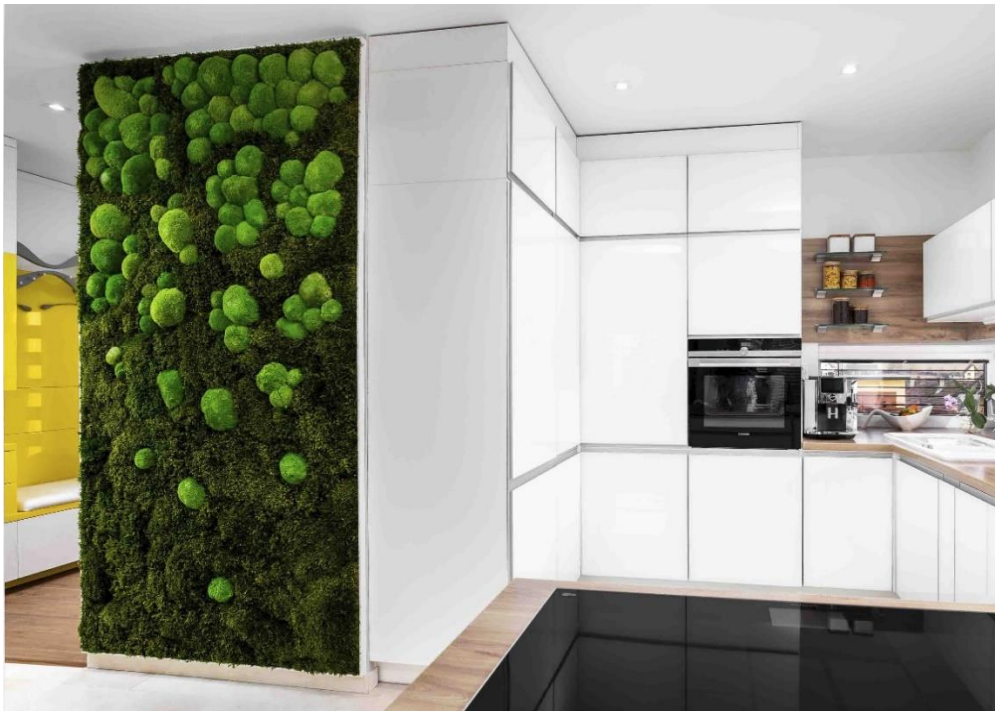

Flatmoss stabilized moss is usually used as a base for a green wall of plants or as an excellent combination with the species Bolmoss, but recently it is also popular as a separate element of the whole wall. Moss thickness with base is 25-35mm. The base is 6mm thick wooden MDF. Approximate weight per m<sup>2</sup> is 12-15kg.

## FLATMOSS & BOLMOSS

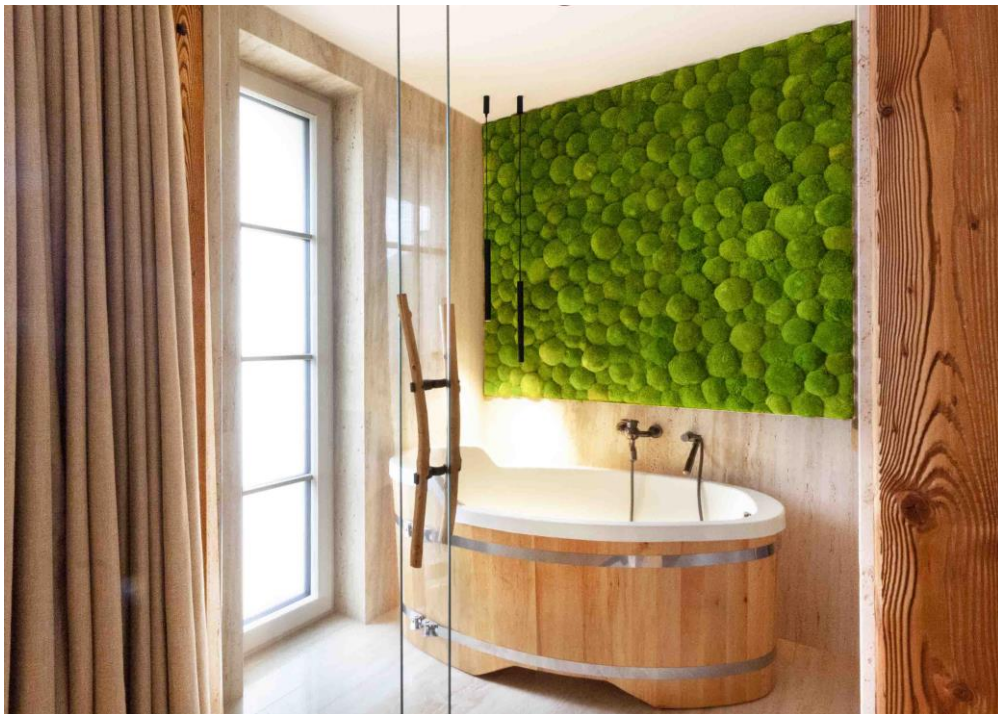

Flatmoss stabilized moss is usually used as a base for a green wall of plants or as an excellent combination with Bolmoss. Hand-picked in the French forests, this top quality moss perfectly matches the design of modern moss walls. When creating walls of the Flatmoss & Bolmoss type, these two types are combined in any proportion according to the client's requirements, thus creating countless possibilities for creating significantly 3D-looking surfaces. Moss wall thickness 25-70mm. Standard version is in the ratio of 70% Flatmoss 30% Bolmoss. The base is 6mm thick wooden MDF. Approximate weight per m2 is 12-15kg.

## BOLMOSS

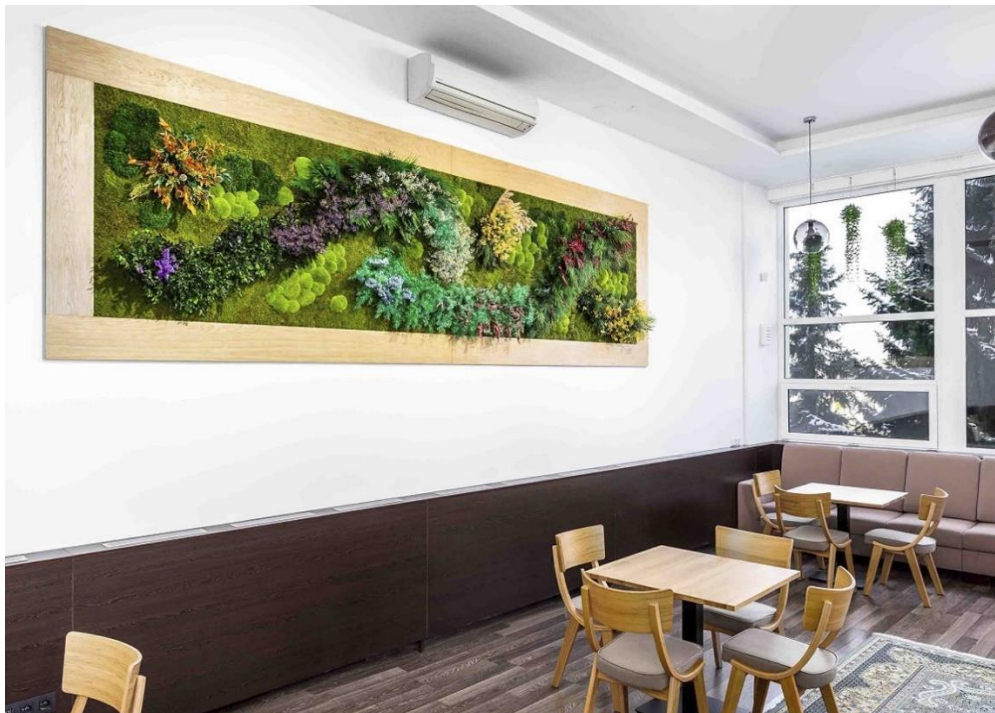

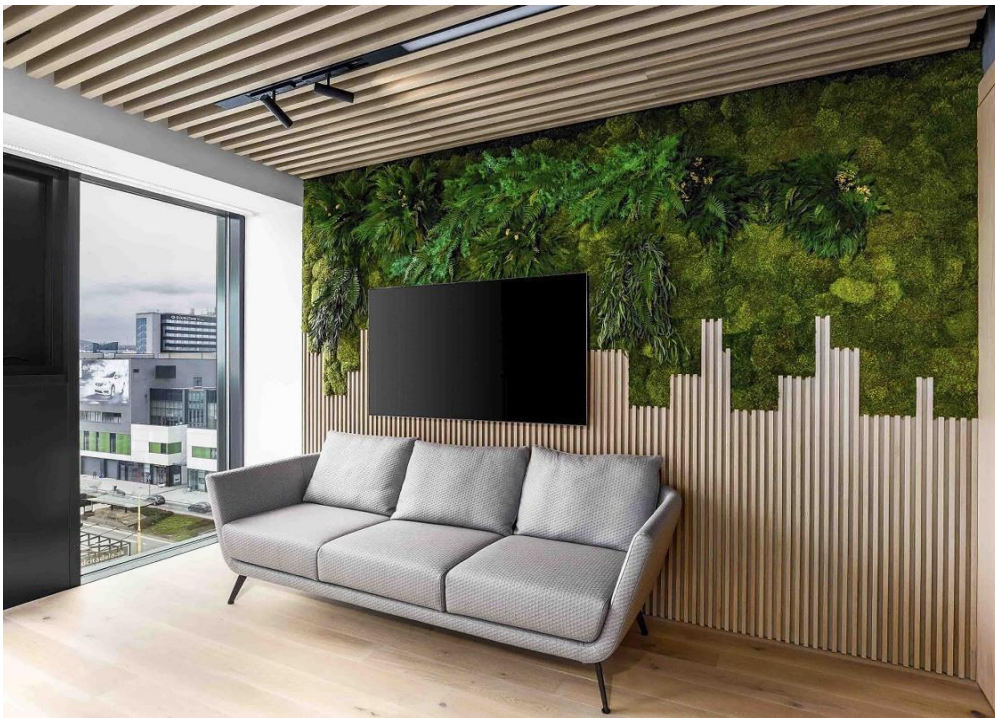

Bolmoss, with a 3D green wall effect, brings color and texture to any space. Hand-picked balls of the best quality from the Scandinavian forests will bring a green lifestyle to your space. Bolmoss are grown in a sustainable way under state supervision and stabilized using a nature-friendly method. Available in pale and darker colors. The color determined during the stabilization phase does not contain any harmful toxic substances. Slight variations in color shade are a sign of the natural origin of the moss, not a defect of the product. Moss thickness with base 50-80mm. As the only manufacturer, we offer UV-resistant Bolmoss with a significantly longer service life. The base is 6mm thick wooden MDF. Approximate weight per m2 is 12-15kg.

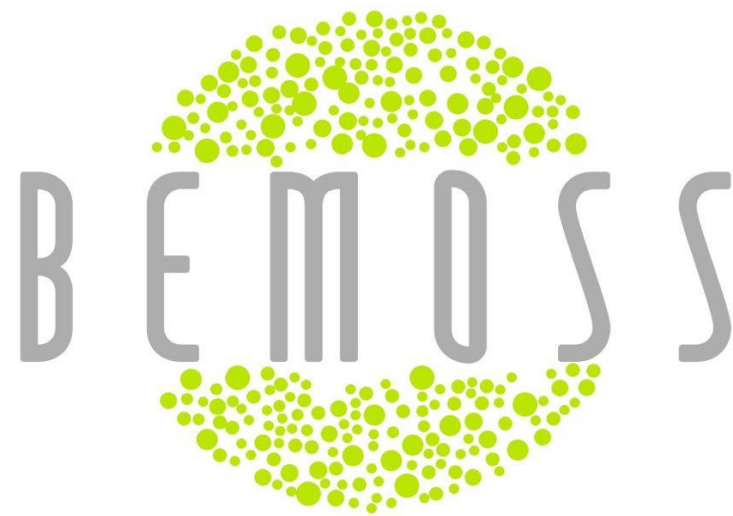

## STABILIZED PLANTS

Stabilized plants come from South American countries, flowers and wild plants provide a real green wall effect. Thanks to this innovative concept of BEMOSS vertical gardens, you enter the real world of plant design. Our collection of plants fits perfectly into any interior, regardless of its nature, and thus creates a unique personal design that will be a constant attraction for your looks. The color determined during the stabilization phase does not contain any harmful toxic substances. Slight variations in the color shade are a sign of the natural origin of the moss, not a defect of the product. Combination of moss and Stabilized plants with a content of about 30% of plants. Moss wall with stabilized plants thickness 150-200mm. Possibility to choose the moss/plants ratio on demand. The base is 6mm thick wooden MDF. Approximate weight per m2 is 12-15kg.
