

How to Use Tox (Simplified Guide)

■ ■ Disclaimer: This guide is for educational purposes only and not medical advice. Always consult a licensed medical professional before performing or receiving any treatment.

1. Reconstitution

- Use sterile saline: 1 mL–2.5 mL depending on desired concentration.
- Draw saline with a 3 mL syringe (recommended).
- Attach a 27G needle to add saline into the vial slowly.
- Roll vial gently in your hands — do not shake.

2. Tools Needed

- Toxin vial (botulinum toxin).
- Sterile saline (1 mL–2.5 mL).
- 3 mL syringe for reconstitution.
- 27G needle for reconstitution.
- Insulin syringes / fine needles (30G–34G) for injection.
- Alcohol wipes (for vial tops and skin prep).
- Gloves (recommended).
- Numbing cream (optional).
