

MilKFill 3 Plus Fine

What is MilKFill 3 Plus Fine? MilKFill 3 Plus Fine is a premium cross-linked hyaluronic acid dermal filler, uses a proprietary 3D Crosslink Technology that transforms loose and unstable hyaluronic acid chains into a highly stable and elastic gel. Unlike standard fillers, this advanced two-phase process builds a strong molecular network. MilKFill 3 Plus Filler's 3D Technology delivers a perfect balance between structure and softness, making it a trusted choice for both doctors and patients. Its ultra-smooth texture allows precise injection and natural contouring with minimal resistance. Made with ultra-pure HA and triple-purified for clinically proven safety. MilKFill 3 Plus is conveniently packaged with 3 pre-filled syringes, making it cost-effective and clinic-friendly, overall your ideal choice to size up your confidence.

MilKFill 3 Plus Fine

Where is MilKFill 3 Plus Fine recommended? MilKFill 3 Plus Fine is formulated for thin and sensitive parts of the face such as under eye area (tear troughs), marionette lines, crow's feet, small volume on lips. MilKFill 3 Plus Fine is enriched with lidocaine for improved comfort during injection, it features high viscoelasticity and a smooth gel texture, allowing precise shaping with long-lasting effects. Developed over 3 years of R&D, MilKFill 3 Plus Fine was created to achieve optimal performance in volume retention, moldability, and longevity. The inclusion of lidocaine further enhances the patient's treatment experience.

MilKFill 3 Plus Fine

Characteristics of MilKFill 3 Plus Fine • Purity & Safety: Contains ultra-low levels of BDDE and endotoxins • High Viscoelasticity: For stable shaping and volume support • Optimal Particle Size: Uniform microgel particles for smooth results • Natural Expression: Designed to adapt to facial movement • Longevity: Lasts 6 to 12 months depending on area and metabolism • Convenience: Comes in 3 pre-filled 1.1 mL syringes per box

MilKFill 3 Plus Fine

How to use MilKFill 3 Plus Fine General Instructions for Filler Injection Procedure MilKFill 3 Plus must be administered by certified medical professionals. Proper disinfection of the injection site is required. Bruising and swelling may occur post-procedure and usually subside within 7 days. The procedure typically takes 15–30 minutes. Recommended needle type with MilKFill 3 Plus Fine is 30G-31G. Common Filler Injection Techniques 1 Tunneling Technique Used for linear wrinkles and volume lines, filler is injected retrogradely while withdrawing the needle at a 30–45° angle. 2 Point Technique Involves injecting micro-droplets into the dermis or subcutaneous layer for overall skin lifting and hydration. 3 Stretching Technique Stretching the skin provides more visibility and accuracy when injecting into areas with sagging or loose tissue. 4 Dual Plane Technique Applies filler to both the dermis and subdermal layers to treat wrinkles and volume loss simultaneously, sometimes using different densities of filler for each layer.
