# THE KALLIERGO DIFFERENCE

## OUR STEEL TUNNELS AVAILABLE AS INSTALLED OR DIY OPTIONS

- Our Steel Frames are rolled rather than bent to provide stronger support.
- We treat our Steel Frames with a special blend of paints to enhance UV stability and Steel Protection.
- Perfect for trellising vegetables
- Engineered to be robust and long-lasting.
- In order to enhance resilience and longevity, we place our arches closer together at 1.5m intervals.
- Our Plastic and Premium tunnels feature a covering of 200-micron plastic that is UV treated, antibacterial, infra-red thermal treated, and light-diffusing.
- The Premium Option Tunnels are equipped with hail netting over the plastic covering to provide additional protection.
- Tunnel lengths range from 4.5m to 30m.
- Our tunnels come in various widths:
  - 4.2m Wide x 2.4m High
  - 5.0m Wide x 2.6m/2.8m High

# GeoTower™

Building on the success from the Gen2 Towers Kalliergo  
Developed the Gen3 GeoTowers.

Developing GeoTowers that can give you Higher amounts of  
plants and also Higher Yields . The Tower is almost double in  
width from where the Gen2 Towers was and also giving the  
end consumer more root area for the Plants to grow in .

But keeping form and function into consideration for the  
Tower.

The Gen3 GeoTowers are built by one of the most  
Experienced Molding Companies in South Africa

Utilizing some of the most advanced machinery systems  
available in South Africa

Keeping Client and Material Quality in mind , Made from the  
Same Materials that fresh water tanks are made from and  
using top quality sourced virgin materials to manufacture the  
Gen3 GeoTowers from

We have been using a slow release fertilizer since August  
2023 and results have been satisfactory

- The most reliable and effective way to make the availability  
of nutrients coincide with plant requirements is by  
controlling their release into the soil solution, using  
controlled release fertilizers. This is accomplished by  
encapsulating fertilizer granules in a polymeric coating,
- A single pre-planting application of controlled release  
fertilizer (CRF) can fill a crop's nutritional requirements  
throughout its growth season, designed to feed plants  
continuously, at maximum nutrient uptake efficiency. The  
controlled release fertilizers save labor and application costs,  
enable application independent of the irrigation system,  
and require no sophisticated equipment.
- The controlled release fertilizers granules are applied to the  
Growing Medium, the coating acts as a semi-permeable  
barrier that allows continuous release of nutrients to the  
root zone.

# GEOTOWER HAS 33 OR 66 GROWING HOLES

- EASY ACCESS TO ALL PLANTS
- MANUFACTURED TO THE HIGHEST QUALITY
- MADE FROM A UV STABLE PLASTIC, SAME PLASTIC THAT IS USED IN FRESH WATER TANKS
- TOP SECTION OF THE GEOTOWERS CAN BE EASILY TURNED
- THE TOP OF THE TOWER CAN ALSO BE USED FOR GROWING LARGER PLANTS
- AFFORDABLE AND MOVEABLE SOLUTION
