# QUALITY AFFORDABLE GREENHOUSES

## The Kalliergo Difference

Our steel tunnels are available in both installed and DIY versions. The steel frames are rolled instead of bent to provide additional reinforcement.

In order to enhance resilience and longevity, we place our arches closer together at 1.5m intervals instead of 3m as most competitors. To improve UV stability and shield the steel, we apply a UV paint blend to the frames. These tunnels are ideal for vegetable trellising, built to be durable & rigid

## Tunnel Advantage

Tunnels are commonly seen as a tool for extending the growing season, but that's just part of their benefits. Covered growing areas offer year-round protection for plants against elements like rain, pests, frost, wind, and even soil splashes during heavy rainfall.

## Our Tunnels

### Covering & Protection

The Plastic we use on the tunnels is 200-micron plastic that is UV treated, antibacterial, infra-red thermal treated, and light-diffusing.

### Options Available

- Tunnel lengths range from 3m to 30m.
- Affordable Caterpillar Tunnels 4.2m W
  - Easy DIY Option and for Quick Crop Protection
- 3m Wide Options is Free Standing
- Our tunnels come in Three widths:
  - 3m Wide x 2.2m High
  - 4.2m Wide x 2.4m High
  - 5.0m Wide x 2.6/2.7m High
