Growing Into The Future

## QUALITY AFFORDABLE GREENHOUSES

"We wanted to create a Greenhouse that will look appealing in any garden , whether it be on a rooftop at a fancy restaurant or in a rural setting " Anthoney Lacy

### The Kalliergo Difference

Our steel tunnels are available in both installed and DIY versions. The steel frames are rolled instead of bent to provide additional reinforcement. In order to enhance resilience and longevity, we place our arches closer together at 1.5m intervals instead of 3m as most competitors. The Premium Option Tunnels are equipped with hail netting over the plastic covering to provide additional protection.

### Tunnel Advantage

Tunnels are commonly seen as a tool for extending the growing season, but that's just part of their benefits. Covered growing areas offer year-round protection for plants against elements like rain, pests, frost, wind, and even soil splashes during heavy rainfall.

### Our Tunnels

#### Covering & Protection

Our Plastic and Premium tunnels feature a covering of 200-micron plastic that is UV treated, antibacterial, infra-red thermal treated, and light-diffusing.

#### Strenght and Endurance

To improve UV stability and shield the steel, we apply a UV paint blend to the frames. These tunnels are ideal for vegetable trellising, built to be durable & rigid

#### Options Available

- Tunnel lengths range from 4.5m to 30m.
- Our tunnels come in two widths:
  - 4.2m Wide x 2.4m High
  - 5.0m Wide x 2.7m High

# GeoTower™

Building on the success from the Gen2 Towers Kalliergo  
Developed the Gen3 GeoTowers.

Developing GeoTowers that can give you Higher amounts of  
plants and also Higher Yields . The Tower is almost double in  
width from where the Gen2 Towers was and also giving the  
end consumer more root area for the Plants to grow in .

But keeping form and function into consideration for the  
Tower.

The Gen3 GeoTowers are built by one of the most  
Experienced Molding Companies in South Africa

Utilizing some of the most advanced machinery systems  
available in South Africa

Keeping Client and Material Quality in mind , Made from the  
Same Materials that fresh water tanks are made from

We have been using a slow release fertilizer since August  
2023 and results have been satisfactory

- The most reliable and effective way to make the availability of nutrients coincide with plant requirements is by controlling their release into the soil solution, using controlled release fertilizers. This is accomplished by encapsulating fertilizer granules in a polymeric coating,
- A single pre-planting application of controlled release fertilizer (CRF) can fill a crop's nutritional requirements throughout its growth season, designed to feed plants continuously, at maximum nutrient uptake efficiency. The controlled release fertilizers save labor and application costs, enable application independent of the irrigation system, and require no sophisticated equipment.
- The controlled release fertilizers granules are applied to the Growing Medium, the coating acts as a semi-permeable barrier that allows continuous release of nutrients to the root zone.

# GeoTower™ Gen3

## Small GeoTower™

up to 33 Plant Grow Area, Plant Species Dependant

**R1750** With Slow Release Fertilizer & Growing Medium

**R 1295** No Growing Medium or Fertilizer

## Large GeoTower™

with Growing Medium up to 66 Plant Grow Area, Plant Species Dependant

**R2650** With Slow Release Fertilizer & Growing Medium

**R2250** No Growing Medium or Fertilizer

- GeoTower does not have a water pump to circulate water , the Tower uses a Coco Peat Growing Medium, Watered Manually from the top with a Hose or other preferred Watering methods
- Tower has 33 or 66 Grow holes
- On top of Tower can Also Act as a growing Area for Plants
- Easy Access to All Plants,Top of Large Tower can be Turned
- Affordable,Moveable and Cost-Effective solution
- Made from a UV Stable Plastic
- Manufactured to the Highest Quality
