## ATOM 500 EXTRA HEAVY DUTY Our Mightiest Winch Assist Device

Well, here we are in February, slowly edging towards longer, milder days and (hopefully) moving away from the troubles and testing times of 2020 & 2021. Although there are a number of challenges we are still facing, such as new vehicle supply issues and soaring used car prices.

Stay positive, better days are on their way.

Here at APL HQ we have been keeping productive, creating some exciting new products to talk to you about.....

### ATOM 500KG SWL WINCH

For use in ambulances, PTS or any type of large wheelchair accessible vehicle. Both powerful and reliable, it can effortlessly pull 500kg up a ramp with a 12° incline. The ATOM 500 kit can either be supplied with a remote control equipped with wander-lead attachment (as photo above) or with our traditional wireless remote controls. Built to the highest specification, this winch is durable, easy to use and super simple to install. The supplied kit comes as standard with remote controls, moulded cover, 'v' harness wheelchair attachment and quick-release winch mounting plate. No hidden extras!

## **PORTAWINCH 500 EXTRA HEAVY DUTY**

### **Battery Powered Winch Assist Device**

## **PORTAWINCH 500KG SWL**

You asked, we listened! Our industry-leading battery powered, portable winch has been given a boost and is now available with either 250kg or 500kg pulling capacity. The unique advantage of the Portawinch is it can be freely transferred from vehicle to vehicle, or even fitted to a wall if assistance is needed up and down a driveway. It detaches in seconds and can be stored away when not in use. This is particularly useful if you have limited floor space.

You can now also upgrade to an in-vehicle charger that plugs directly into the 12v outlet, allowing you to charge your battery whilst on the move!

All our ATOM winches have been updated and now come as standard with our quick-release mounting plate. This clever mechanism puts an end to the time and trouble it takes removing the winch from the vehicle, should you need to. No tools needed, you simply unplug the wiring from the unit, unscrew and remove the moulded cover, then slide the winch off the mounting plate. Et voila!
