WNV Overview

David Wechsler, PhD

David Wechsler obtained his Master of Arts (1917) and Doctorate (1925) degrees at Columbia University under B. Woodworth. He worked with E. L. Thorndike at the Psychological Clinic at Columbia University and at the Metropolitan Hospital until 1927. He was also a clinical professor at the Medical College of New York University until 1967.

Dr. Wechsler shaped the field of intelligence testing with his vision and creation of a number of tests. Dr. Wechsler is known for three book publications: *The Range of Human Capacities* (1935), *The Measurement of Adult Intelligence* (1950), and *The Measurement and Appraisal of Adult Intelligence* (1958), and a number of other publications: the *Wechsler-Bellevue Intelligence Scale* (WBIS; 1945), and the *Wechsler Adult Intelligence Scale* (WAIS; 1974), and the *Wechsler Intelligence Scale for Children* (WISC; 1998), and the *Wechsler Memory Scale* (WMS; 1998).

Dr. Wechsler passed away in 1981, but his legacy lives on through the tests he created.

Jack A. Naglieri, PhD

Jack A. Naglieri obtained his Master of Science degree from St. John's University (1974). He worked as a school psychologist in the New York area from 1974 to 1977, prior to coming to his doctorate from the University of Georgia (1978) under the direction of J. S. Kaufman, who had worked with Dr. Wechsler. In 1980 he began his career as a university professor at Northern Arizona University and from 1989 to 2000 was the faculty at Ohio State University. Dr. Naglieri was director of GMU's Center for Cognitive Development from 2000-2004, and is now a Professor of Psychology and the School Psychology Program, Director at George Mason University in Fairfax, Virginia. He holds an appointment as a Senior Research Scientist at the University of Virginia, Institute for Clinical Training and Research and is director of the school psychology program. He is the Senior Editor of the *Journal of Assessment Education* and is on the editorial boards of many professional journals.

Dr. Naglieri is the author of more than 200 scholarly publications and books in the area of psychological assessment and intervention, including *Helping Children Learn: Instructional Strategies for Use at School and Above* (with Polking, 2005). He is the author of the widely used *Naglieri Nonverbal Ability Scale* (1997, 2002), as well as other tests designed to measure abilities, cognitive processing, emotional disorders, attention, and memory.

Instructions

- Pre administration instruction
- Subtest administration has three levels
 - Pictorial directions
 - Short verbal instructions
 - Provided in 5 languages
 - Opportunity to provide help as needed

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

WNV Overview

- The WNV is a nonverbal measure of general ability measured using tests that
 - involve different demands
 - do not contain verbal content (e.g., Vocabulary)
 - do not require the examinee to speak
 - use pictorial directions

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

WNV Overview

- **WNV was specifically created for:**
 - Individuals from diverse linguistic groups
 - Those who have limited language skills
 - Hard of hearing or deaf individuals
 - Individuals with language disorders
 - Identification of gifted children from linguistically and culturally diverse populations

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

7

WNV Overview

- The test is intended for fair assessment of culturally and linguistically diverse populations from many countries
- Standardized in the US and Canada
- For ages 4:0 – 21:11
- Yields a Full Scale and subtest scores
- Innovative administration format
- Full (45 minute) and brief (20 minute) versions *and software* included in every kit

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

8

WNV Overview

- The WNV can be given to a wide variety of individuals making it ideal for students who speak many languages
- Minimal adaptation needed for use in different countries or with those from different countries
- Meets IDEA 2004 requirements for reliable and valid nondiscriminatory assessment

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

9

WNV Overview

- The WNV uses a new method for informing the examinee of the demands of the test – Pictorial Directions (patent pending)
- Examinees are shown a series of pictures that illustrate what he or she has to do
- The Pictorial Directions include gestures by the examiner that draw the examinee's attention to the correspondence between the directions and the stimuli on the table

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Before Starting

Getting Started

Introducing the WNV to Examinees Ages 4:0–7:11

Before you begin, ensure that the necessary test materials are in order, and that the examinee is engaged in the testing process. (Refer to chapter 2 of this Manual for guidelines in establishing rapport and maintaining rapport.) When you feel that you have attained a sufficient level of rapport and engagement, introduce the WNV by saying,

E: You will be doing several different things today. I will show you some pictures that will help you understand what to do. Look carefully to see what the children in the pictures are doing. That will show you what to do. You can also ask me questions.

F: Aujourd'hui, nous allons faire différentes choses. Je vais te montrer des images qui t'aideront à comprendre ce qu'il faut faire. Regarde attentivement pour voir ce que font les enfants dans ces images. Ils te montreront ce que tu dois faire. Tu peux aussi me poser des questions.

S: Hoy vas a hacer varias cosas diferentes. Te voy a enseñar algunos dibujos que te van a ayudar a entender lo que tienes que hacer. Mira con cuidado a lo que hacen los niños en los dibujos. Eso te enseña lo que tienes que hacer. También puedes preguntarme.

C: 今天將請你做幾件不同的事情。我會給你一些圖片來幫助你理解所要做的事情。

Instructions

- Pre administration instruction
- Subtest administration has three levels
 - Pictorial directions
 - Short verbal instructions
 - Provided in 5 languages
 - Opportunity to provide help as needed

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

15

Matrices Administration

Item Administration

Demonstration Item 4-7

1. Place the coil-bound edge of the Stimulus Book toward the examinee. Turn to the pictorial directions for Matrices.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

16

Matrices Administration

2. Slowly point to each frame of the pictorial directions from the examinee's left to right, briefly looking at the examinee as you point to each frame to be sure he or she is attending.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

17

Matrices Administration

3. Allow the examinee time to look at the pictorial directions (up to a minute if needed).
4. Point to the first frame of the pictorial directions, then point to the top of the stimulus page.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

18

Matrices Administration

5. Point to the second frame of the pictorial directions, then slowly sweep your hand along the response options in numerical order.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Matrices Administration

6. Point to the third frame of the pictorial directions, point to the question mark in the matrix, slowly sweep your hand along the response options in numerical order, and then look at the examinee.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Instructions

- Pre administration instruction
- Subtest administration has three levels
 - Pictorial directions
 - Short verbal instructions
 - Provided in 5 languages
 - Opportunity to provide help as needed

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Matrices Administration

7. If the examinee does not respond or appears confused, prompt by saying, Which one of these (sweep your hand along the response options in numerical order) goes here (point to the question mark)? Provide additional help until the examinee understands the task.

E: Which one of these goes here?	F: Laquelle de celles-ci va ici?
S: ¿Cuál de éstos va aquí?	C: 這些中的哪一個填在這兒?
G: Welches von diesen passt hier?	D: Welk van deze past hier?

and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Instructions

- Verbal directions in several languages are provided in the Administration Manual

If the examinee does not respond or appears confused, prompt by saying, Which one of these (sweep your hand along the response options in numerical order) goes here (point to the question mark)? Provide additional help until the examinee understands the task.

E: Which one of these goes here?	F: Laquelle de celles-ci va ici?
S: ¿Cuál de éstos va aquí?	C: 這些中的哪一個填在這兒?
G: Welches von diesen passt hier?	D: Welk van deze past hier?

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Matrices Administration

Incorrect response/No response:

1. Point to all of the blue circles in the matrix and then point to the question mark. Sweep your hand along the response options in numerical order and say, This one is the answer (point to 1).

E: This one is the answer.	F: Celle-ci est la réponse.
S: Esta es la respuesta.	C: 這個是正確答案。
G: Dieses ist die Antwort.	D: Dit is het goede antwoord.
2. Provide additional help, as needed, until the examinee understands the task.
3. Proceed to Sample Item A.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

25

Provide Help

42 Matrices

Item Administration

4-7 Demonstration Item

1. Place the coil-bound edge of the Stimulus Book toward the examinee. Turn to the pictorial directions for Matrices.
7. If the examinee does not respond or appears confused, prompt by saying, **Which one of these (sweep your hand along the response options in numerical order) goes here (point to the question mark)?** Provide additional help until the examinee understands the task.

Opportunity to provide help

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

26

Instructions

- Provide help instruction allows the examiner to interact with the examinee in any manner to ensure that the demands of the task are understood. This is not teaching how to do the task, but instead explaining what is required.

Full Scale 4

- Full Scale (M=100, SD=15, 40-160)

Table A.2 WNV^{US}: Full Scale Score Equivalents of Sums of T Scores for the 4-Subtest Battery (continued)

Sum of T Scores	Full Scale Score	Percentile Rank	Confidence Level		Sum of T Scores	Full Scale Score	Percentile Rank
			90%	95%			
			204	102			
205	102	55	95-109	94-110	246	125	95
206	103	58	96-109	95-111	247	125	95
207	103	58	96-109	95-111	248	126	96
208	104	61	97-110	96-112	249	126	96
209	104	61	97-110	96-112	250	127	96
210	105	63	98-111	97-113	251	127	96

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Step 1

• Report WNV Full Scale standard score

Following: Lucy obtained a WNV Full Scale score of 103, which is ranked at the 58th percentile. She did as well as, or better than, 58% of examinees her age in the normative sample on the WNV Full Scale score. There is a 90% chance that her true Full Scale score lies within the range of 96 and 109. Lucy's Full Scale score of 103 lies within the Average classification.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

61

Step 1

Table 6.2 Qualitative Classifications of Full Scale Scores and Percentages in the Theoretical and Actual Normative Samples

Full Scale Score	Classification	Percent Included	
		Theoretical Normal Curve	U.S. Sample *
≥130	Very Superior	2.2	1.7
120–129	Superior	6.7	7.8
110–119	High Average	16.1	17.1
90–109	Average	50.0	49.8
80–89	Low Average	16.1	15.4
70–79	Borderline	6.7	5.4
≤69	Extremely Low	2.2	2.8

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

62

Step 1

- Compare WNV Full Scale to WIAT-II
 - Tables B.2 and B.3 provide differences between WNV FS (4-Subtest Battery) and WIAT-II Subtest and Composite Scores using the Predicted-Difference Method
 - Tables B.5 and B.6 provide the values using the Simple Difference Method
- Base rate data is provided for both types of comparisons

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

63

Step 2

- Step 2. Subtest Analysis
 - Compute the mean of the four T scores
 - Subtract the mean from each T score
 - Compare the differences to the value in Table B.1
 - Differences that are equal to or greater than the value in Table B.1 are significant
 - Negative values are Weaknesses
 - Positive values are Strengths

65

Subtest Str & Wk

34 General Testing, Administration, and Scoring Guide

Subtest T Score Profile

	MA	CD	SSp	PA
Ages 8:0–21:11	51	38	50	54

4-Subtest Battery

Subtest	Subtest T Score	Difference from Mean	Critical Value (15 or 20)	Strength or Weakness	Base Rate
Matrices	51	+3	6	W	9.1
Coding	38	-10	10	S	9.1
Spatial Span	50	+2	8	S	W
Picture Arrangement	54	+6	10	S	W

Sum of T Scores 193 B 4 = +3 Mean T Score

See Tables B.1 and B.2 for subtest strengths and weaknesses.

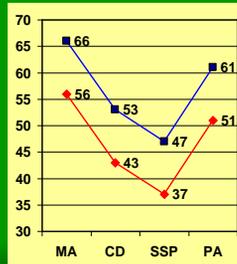

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

66

Step 2

- Subtest T scores:
 - Matrices 56
 - Coding 43
 - Spatial Span 37
 - Picture Arrangement 51
 - mean T score = 47
- Matrices is a strength (56 - 47 = 9; need 8 @ .05)
- Spatial Span is a weakness (37 - 47 = -10; need 8 @ .05) and it is below 40

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Step 2

- Subtests:
 - Matrices 57
 - Coding 44
 - Spatial Span 38
 - Picture Arr 52
 - mean T = 48
- Lucy's scores on individual subtests indicate a relative strength on Matrices, a subtest requiring reasoning with spatial designs (Matrices = 57 vs. Mean = 48), and a relative weakness on Spatial Span, a subtest requiring visual-spatial memory (Spatial Span = 38 vs. Mean = 48). Additionally, Lucy's Spatial Span score is below average and the discrepancy between Lucy's Spatial Span T score and her mean T score was unusual (occurring in only about 6% of the normative sample).

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Step 2

Appendix B 157

Table B.3 WNV^{US}: Differences Required for Statistical Significance (Critical Values) for Comparisons Between Two Subtest T Scores, by Age Band

Subtest	Ages 4.0-7.11				Subtest	Ages 8.0-21.11			
	MA	CD	OA	RG		MA	CD	SSp	PA
Matrices		8	8	8	Matrices		8	7	9
Coding	11		9	9	Coding	11		9	10
Object Assembly	12	12		9	Spatial Span	10	12		9
Recognition	11	12	13		Picture Arrangement	12	14	12	

Note: Differences between subtest T scores required for significance (critical values) at the .15 level appear above the diagonal in the shaded area, and differences required for statistical significance at the .05 level appear below the diagonal. The differences required for statistical significance are based on the average standard error of measurement across all ages for each subtest and calculated with the following formula:

$$\text{Critical Value of Difference Score} = Z\sqrt{SEM_A^2 + SEM_B^2}$$

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Step 3

- Spatial Span Forward and Backward each yield a T score
- These scores can be compared using Table C.2 in the Administration Manual

Table C.2 WNV^{US}: Differences Required for Statistical Significance (Critical Values) for Comparison of Spatial Span Forward (SSpF) and Spatial Span Backward (SSpB) T Scores

	Significance Level	Difference
SSpF-SSpB	.15	9
	.05	13

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Optional Analysis

Ages 8.0-21.11 Optional Analysis E

Total Raw Score to T Score Conversion			T Score Comparison					
Score	Raw Score	T Score	Score Comparison	T Score SSpF	T Score SSpB	Difference	Critical Value	Base Rate
Spatial Span Forward	9	60	SSpF-SSpB	60	47	+13	13	.5
Spatial Span Backward	4	47						

See Table C.1 for T score conversions. See Tables C.2 and C.3 for T score comparison.

Raw Score to Base Rate Conversion			Raw Score Comparison				
Score	Raw Score	Base Rate	Score Comparison	Raw Score SSpF	Raw Score SSpB	Difference	Base Rate
Longest Spatial Span Forward	9	59.4	SSpF-SSpB	60	47	+13	26.5
Longest Spatial Span Backward	4	42.8					

See Table C.4 for base rates.

Spatial Span Fw vs Bk

Appendix C 193

Table C.2 WNV^{US}: Differences Required for Statistical Significance (Critical Values) for Comparison of Spatial Span Forward (SSpF) and Spatial Span Backward (SSpB) T Scores

	Significance Level	Difference
SSpF-SSpB	.15	9
	.05	13

Note: Differences required for statistical significance are based on the standard errors of measurement of each composite for each age group and calculated with the following formula:

$$\text{Critical Value of Difference Score} = Z\sqrt{SEM_A^2 + SEM_B^2}$$

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Step 3

- Base rates for the differences
 - 25% obtained Spatial Span Forward 7 or more points higher than Backwards

Table C.3 WNV[®]: Cumulative Percentages of Normative Sample (Base Rates) Obtaining Various T Score Differences for Spatial Span Forward (SSpF) and Spatial Span Backward (SSpB)

Absolute Difference	SSpF vs. SSpB		Absolute Difference	SSpF vs. SSpB	
	SSpF<SSpB (-)	SSpF>SSpB (+)		SSpF<SSpB (-)	SSpF>SSpB (+)
>55	0.0	0.0	25	1.0	
54	0.0	0.0	24	1.3	
53	0.0	0.0	23	1.5	

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

73

Step 3

Table C.4 WNV[®]: Cumulative Percentages of Normative Sample (Base Rates) Obtaining Various Raw Scores for Longest Spatial Span Forward (LSSpF) and Longest Spatial Span Backward (LSSpB), by Age

Longest Span	Age Group							
	8		9		10		11	
	LSSpF	LSSpB	LSSpF	LSSpB	LSSpF	LSSpB	LSSpF	LSSpB
9	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
8	0.0	0.0	0.0	0.0	2.0	0.0	0.0	0.0
7	2.1	0.0	3.1	1.0	7.1	1.0	6.1	3.1
6	13.5	6.3	34.7	12.2	39.4	19.2	55.1	35.7
5	41.7	24.0	65.3	42.9	67.7	44.4	77.6	63.3
4	87.5	69.8	90.8	80.6	92.9	82.8	98.0	90.8
3	96.9	87.5	100.0	90.8	100.0	92.9	100.0	93.9
2	100.0	97.9	100.0	95.9	100.0	97.0	100.0	98.0
0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Mean	4.4	3.8	4.9	4.2	5.1	4.3	5.4	4.8
SD	1.0	1.2	1.0	1.3	1.1	1.3	0.9	1.3
Median	4.0	4.0	5.0	4.0	5.0	4.0	6.0	5.0

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

74

Step 4

- Intersubtest scatter - the simple-difference between the examinee's highest and lowest subtest T scores can be examined
- Cumulative percentages are reported
- 4-Subtest WNV scatter statistics
 - Mean = 5.7
 - SD = 4.1
- 2-Subtest WNV scatter statistics
 - Mean = 8.6
 - SD = 46.1

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

75

Step 5 Intervention

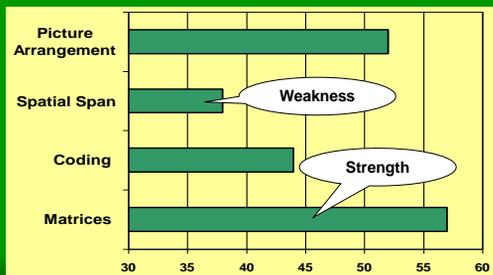

- Intervention
 - Based on subtest scores
 - Manual example of Lucy
 - She performed poorly in relation to her overall subtest mean and in relation to her peers
 - This suggests that it may be useful to consider the role memory difficulties may play in academic tasks
 - Also consider other evidence of memory status
 - » Teacher and parent reports
 - » Other data

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

76

Step 5 Intervention

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

77

Step 5 Intervention

- Lucy performed poorly in relation to her mean and her peers on Spatial Span
 - consider the role of memory in academic tasks
 - especially if there are parent or teacher concerns about Lucy remembering information
 - The same hypothesis could be associated with
 - Recognition
 - Coding -- if the examinee did not appear to remember the correspondence between shapes and numbers

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

78

Step 5 Intervention

- Use chunking or mnemonic methods for tasks that demand recall of information
- There is much empirical support for these techniques for improving memory (Mastropieri & Scuggs, 2006; Minskoff & Allsopp, 2003).
- To aid in the selection and communication of these interventions to parents and teachers use Naglieri and Pickering (2003) handouts

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

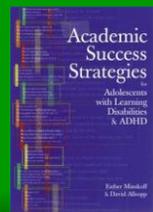

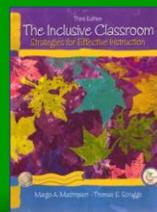

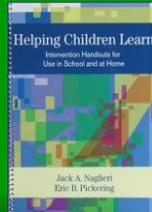

79

Step 5 Intervention

80

Step 5 Intervention

Helping Children Learn
Intervention Handouts for Use in School and at Home

Chunking for Reading/Decoding

Reading/decoding requires the student to look at the sequence of the letters in words and understand the organization of specific sounds in order. Some students have difficulty with long sequences of letters and may benefit from instruction that helps them break the word into smaller, more manageable units, called chunks. Sometimes the order of the sounds in a word is more easily organized if the entire word is broken into these units. These chunks can be combined into units for accurate decoding. Chunking for reading/decoding is a strategy designed to do that.

How to Teach Chunking for Reading/Decoding

Teachers should first teach the children what it means to chunk or group information so that it can be remembered more easily. Use number sequences and letters for illustration (e.g., how telephone numbers are grouped). Then introduce words to be read and break the words into units, such as re-mem-bar for remember or car-pet for carpet. Try to organize the groups of letters in the word in ways that are natural (see Figure 1). For example, re-mem-bar organizes the letters in groups of two, but that is not as easy to remember as re-mem-bar because it doesn't follow the way people naturally say the sounds.

Plan	Action
Look at the word.	"I see the word beginning."
Find the chunk.	"I see the chunk given in the middle."
Sound out the chunk.	"I say, 'gim.'"
Sound out the beginning.	"I say, 'bc.'"
Sound out the chunk.	"I say, 'gim.'"
Sound out the ending.	"I say, 'hg.'"
Say the word.	"I say, 'beginning.'"

81

Step 5 Intervention

Helping Children Learn
Intervention Handouts for Use in School and at Home

Chunking Strategy for Multiplication

Multiplication is a task that involves recalling of basic math facts, remembering procedures to be followed, solving carefully, and showing one's work. Sometimes, children need a way to organize the numbers when doing multiplication, especially when they try to do the work by breaking the multiplication problem into parts. Providing these students with a strategy to do basic multiplication tasks can help them be more successful.

The multiplication strategy of chunking helps children break the numerical problem into separate parts that can be more easily solved. Children who have trouble doing multiplication may benefit from this strategy because it helps them break the problem down to more manageable parts. The way the strategy works is that the child is taught to break the numbers into groups (i.e., chunks) that can be more easily managed. For example, 2×16 is the same as counting by two's eight times. A child is taught to use a slash mark (/) for each step of counting by two's when the eighth slash mark is written the problem is solved. Use the steps to teach the chunking strategy.

1. Read the problem: $2 \times 16 =$
2. Place a / between the numbers to count by two's
3. Make the number of slash marks indicated by the other number in the case the number is:
4. Count by two's as you touch each mark: "2, 4, 6, 8, ..."
5. Stop counting at the last mark: "...16, 12, 14, 16"
6. The number you stopped on is the answer: "16"

Chunking for Spelling

Learn to chunk or group information so that it is organized and letters for illustration. Then, introduce units (e.g., group for group, re-mem-bar for re-mem-bar) in sequences that have easy-to-remember by to remember as re-mem-bar

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

82

Step 5 Intervention

Helping Children Learn
Intervention Handouts for Use in School and at Home

Mnemonics for Spelling

Spelling is an important part of education and relates to many other areas in school. Good spellers are skilled at remembering how to correctly spell words even when the words are difficult or unpredictable. These students often have special strategies for remembering hard-to-spell words. Memorizing spelling words requires a good plan or strategy to be effective and efficient. It also requires that students understand the relationship between the letters in words. This intervention is intended to help students remember how to spell difficult words, particularly ones that are not spelled the way they sound.

Memory or mnemonic strategies are techniques for increasing learning. A mnemonic is a specific method that is applied to learn information. Mnemonics have been found to have considerable positive effects on student success. When students spell words and try to memorize them, they are more successful if the spelling facts are made more meaningful. Mnemonic spelling strategies make words more meaningful by combining the difficult spelling word with a part of the word in a sentence or a clear sentence or rhyme. One mnemonic uses a smaller word to focus the speaker on the difficult portion of the word. Here are some examples:

- The school principal is your pal.
- Do not eat your grammar with bad spelling.
- You gain when you began.
- Ask someone to feed the cat before you leave for vacation.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

83

Step 5 Intervention

Helping Children Learn
Intervention Handouts for Use in School and at Home

Order of Operations

Many times, children make facts, such as $2 + 5 \times 6 - 1 =$, such errors because of their arrangement to help children remember facts they are thinking about or process the information. Mnemonic strategies for helping them are better able to remember the relationship to other things. Mnemonic strategies for doing this.

Figure 1. A drawing that represents a common mnemonic. (From Mastropieri & Scuggs, 1991)

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

84

Step 5 Intervention

- If scores on Matrices, Picture Arrangement, and Object Assembly are significantly lower than the mean and below Average
- These subtests require an examinee to relate parts of the items into a coherent whole (described by Naglieri [1999] as involving simultaneous processing)
- What to use?

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

85

Step 5 Intervention

- **Methods such as Graphic Organizers and Story Maps (Mastropieri & Scruggs, 2006; Minskoff & Allsopp, 2003; Naglieri & Pickering, 2003) may help**
- **These methods provide the student with ways of working with information that must be arranged as a conceptual whole**

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

86

Step 5 Intervention

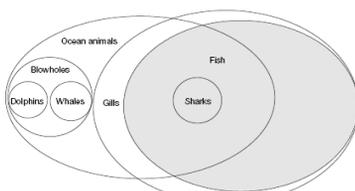

Figure 2. Another kind of graphic organizer:

the key concepts, concepts the child already knows, and the linkages between the concepts.

4. Present the organizer to the child and discuss it to be sure he or she understands the information and sees the connections.

- **Graphic Organizers help students see how information is related**

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Story Plans for Written Composition

Writing a story requires that a student organize and write information in a way that makes sense. To do this, sentences of the story must relate to the story topic. Each sentence and paragraph of the story needs to relate to the other parts so they flow and support the main idea. Good writing instruction should focus on helping the parts of a story together in a way that supports the main idea. (Giving students procedures to follow to plan a story that is organized and fits together is likely to be helpful. A story plan is a diagram of the important parts of a story or text (see Figure 1). The purpose is to help the child determine the facts that might be included in the story, consider the relationships among the parts of the story, and determine how to order the information. Using story plans is an excellent method to help students write a good story.

How to Teach Story Plans

To use this intervention, follow these steps:

1. Tell the students that the story plan is a place for them to organize their thoughts.
2. Have the students fill in the parts of the story plan.

Name: _____ Date: _____	
Who am I writing for?	What is the purpose of the story?
What are the facts?	
How should I organize the facts?

English Language Learners

- The WNV was administered to 55 examinees, ages 8–21, who met the criteria for classification as English Language Learners.
 - native language was not English
 - primary language they spoke was not English
 - language other than English spoken at home
 - parents had resided in the US less than 6 years

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

110

Deaf

- examinees selected based on their lack of ever having heard spoken language
 - examinees must not have been able to hear tones after the age of 18 months
 - must not lip read
 - must not use cued speech (i.e., they must have routine discourse by some means of communicating other than spoken language)
 - severe to profound deafness (hearing loss measured with dB, Pure Tone Average greater than or equal to 55).

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

111

Deaf Individuals

Subtest/ Full Scale Score	Deaf		Matched Control Group

112

Hard of Hearing

- Examinees have had exposure to spoken language, either through hearing or lip reading
- The group could have a unilateral or bilateral hearing loss or deafness
- age of onset of their inability to hear could be any age.
- The examinee could have cochlear implants.
- And the following additional criteria:
 - No disability or impairment other than being deaf or hard of hearing
 - No diagnosis of a neurological disorder

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

115

Summary

- The WNV
 - Provides an innovative method for administration
 - Has excellent reliability
 - Strong validity evidence
 - Easy to interpret
 - Has instructional implications
 - Can be given to a wide age range

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

116

Naglieri, Ph.D. George

Nonverbal Testing

“The whole experience was very frightening... They brought me up to a room... They put a pegboard before me with little sticks of different shapes and little holes... I had to put them in place, the round ones and the square ones... and I did it perfectly. They said, ‘Oh, we must have made a mistake. This little girl... naturally she doesn’t know English, but she’s very bright, intelligent.’ So they took the cross [chalkmark] off me so we were cleared.”

Victoria Sarfatti Fernández, a Macedonian Jewish immigrant in 1916, interviewed in 1985.

PH 27
George

How did the Army's tests influence what we have today?

From the military to the middle school

Coding & Picture Completion

Test 7.—Digit Symbol

E. shows S. the record sheet, points to blank below 2 in the sample, then to symbol for 2 at top of page, writes in symbol, proceeds in the same way with the other parts of the sample, then gives S. pencil, points to space below 3 in the test, and nods affirmatively.

Test 10.—Picture Completion

E. places material before S. as previously described. He then slowly points to the same boy in each of the pictures in succession to indicate the proper sequence of events. He next returns to the demonstrational picture, points to dressed and undressed feet and to empty space. Next he looks leisurely

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Picture Arrangement & Block Design

Test 9.—Picture Arrangement

E. presents demonstrational set and allows S. to see it for about 15 seconds. Then, making sure that S. is attending, he slowly rearranges the pictures and points to each one in succession, attractively.

Test 4.—Cube Construction

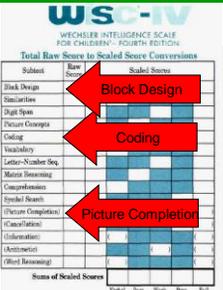

(a) E. presents model 1 and the corresponding blocks, points to bottom, top, and sides of model; then places it upon the table and assembles the blocks rather slowly, turning each block over in the fingers and pointing to painted and unpainted sides. E. now presents the same model and the blocks in irregular order, then points in order to S., to the model, to the blocks, and nods affirmatively. E. repeats, if S. does not understand.

(b) E. presents model 2 with the nine blocks for its construction shows S. bottom, top, and sides of model to be constructed.

WISC-IV

- These nonverbal tests have a long history as measures of general ability
- Nonverbal tests have been shown to be effective measures of general ability

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Verbal Tests

Or general ability measured using tests with verbal content

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

Minority Representation

- Messick (1995) argued that the validity of instruments must be questioned if they contribute to overrepresentation of minorities in special education classes for children with mental retardation (Oswald, Couthino, Best, & Singh, 1999).

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

145

Possible Solutions

- Ban the use of IQ tests
- Change the definition of intelligence
- Increase fair assessment of children using measures that do not use verbal and achievement laden measures of "ability"

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

146

How much is achievement in ability tests?

The answer may surprise you

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

147

Ability vs Achievement

What does scared mean?
(The child answers orally)

Someone who is glad is

- (a) tall
- (b) proud
- (c) happy
- (d) alone

Many IQ tests include Vocabulary items presented orally by the examiner

Many Group Achievement Tests included Reading Vocabulary

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

148

Ability vs Achievement

39.  Point to picture on subjects page and say: What is this called?
 ▲ **Correct:** yoke, neckyoke, ox yoke
 ▼ **Incorrect:** collar, handcuffs
 Q **Query:** harness—Tell me another word.

21.  Point to picture and say: What is this called?
 ▲ **Correct:** yoke lyugol, neck yoke, ox yoke
 ▼ **Incorrect:** collar, handcuffs
 Q **Query:** harness—Tell me another word.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

149

Ability vs Achievement

- Group ability tests require reading and measure academic skills

5. The opposite of cruelty is -
 a. concern b. kindness c. leniency d. brutality

19. Dust is to speck as water is to -
 a. wash b. drop c. sink d. ocean

24. What number comes next in the series?
 1 2 5 6 9 10 13 14 ?
 a. 17 b. 18 c. 16 d. 15

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

150

Ability vs Achievement

- **CogAT Verbal Classification**
 - Which answer goes with the words “red, brown, yellow”
 - A color
 - B crayon
 - C paint
 - D green
 - E marker
- **ITBS Vocabulary test**
 - Select the answer that has the same meaning as the target word.
 - “To peek in the box”
 - A push
 - B stand
 - C break
 - D look

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

152

Ability vs Achievement

- The child reads a sentence and selects an option that completes the meaning “Birds ____ in the sky”
 - A nest
 - B fly
 - C swim
 - D float
- This is also a vocabulary test
- And, these questions require reading
- What level of reading is required?

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

152

Ability vs Achievement

- CogAT Form D Level 6 is intended for children in grades 5 and 6
- The Sentence Completion test readability grade level is 6.1 (range 3.7 - 10.4) using Flesch-Kincaid readability formula
- 80% of the items have readability of grade 5 or more!

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

153

Ability vs Achievement

- One item on the a verbal Comprehension subtest is like this:

What should you do if you see smoke in your house?

What should you do if your house catches on fire?

1. First, get everyone out of the house! Crawl along the floor to avoid breathing smoke.
2. Don't try to put the fire out yourself.
3. Call the fire department from a neighbor's home.
4. When the firefighters arrive, let them know everyone is out of the house.

Remember: Never go back into a burning building for any reason.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

154

Ability vs Achievement

- One item on the a Comprehension subtest is like this:

What should you do if you cut your finger?

3c. Show what to do for a small cut on your finger.

1. Tell a grown-up about the cut.
2. Let the cut bleed a little.
3. Wash it with soap and water, and then dry it.
4. Cover it with a sticky-on bandage. For a big cut, get help fast.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

155

Ability vs Achievement

- Quantitative tests with names like
 - Arithmetic
 - Numerical Reasoning
 - Etc.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

156

Ability vs Achievement

"A boy had twelve books and sold five. How many books did he have left?"

Peter counted seventeen lily pads at the pond. There were frogs sitting on five of the lily pads, and the rest were empty. How many lily pads were empty?

(a) 22 (b) 13 (c) 12

Quantitative subtest items

Group and Individual Achievement Tests

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

157

Ability vs Achievement

• How many marble does Joe have in

An Individual Achievement Numerical Operations Subtest item

• "How many stars are there all together?"

A Quantitative Reasoning item on an individual IQ test

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

158

Quantitative Ability or Achievement?

• How much money would these drinks and snacks cost?

Individual IQ test Quantitative Reasoning

• If you these two balls and you had this much money, how much money you have left

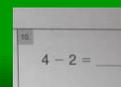

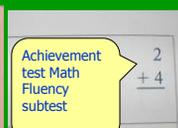

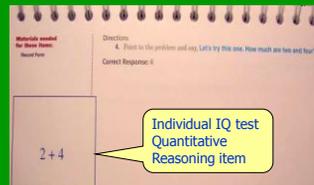

WJ-III ACH Applied Problems

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

159

The Same Question

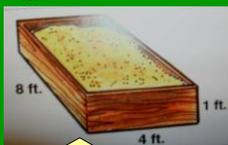

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

160

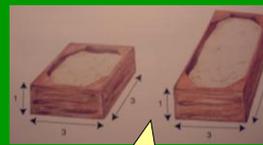

Quantitative Ability or Achievement?

• The sandbox is eight feet long, four feet wide, and one foot deep. How many cubic feet would be needed to fill it?

Achievement subtest Applied Problems

• How much sand is needed to fill this sandbox half way?

IQ test Quantitative Reasoning item

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

161

Poverty & Test Scores

• Poverty or low SES negatively affects test scores because of limited enrichment at home

– high poverty is correlated with low test scores because of issues associated with educational enrichment at home and at school

– many students receive low test scores because of limited opportunity to learn

• Minorities are penalized on traditional tests of intelligence and denied access to gifted education programs and services

• Such denial of access is common when ability tests are highly verbal and achievement oriented

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

162

Nonverbal Assessment

- Bracken and Naglieri (2003) state
 - “general intelligence tests with verbal content and nonverbal content measure essentially the same construct as general ability tests that are entirely nonverbal” (p. 247)
 - Both types measure general ability
 - one measures general ability with varying content (verbal, quantitative, and nonverbal) and the other uses nonverbal tests

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

163

Is a Nonverbal Tests as Powerful as a Verbal/Nonverbal Test?

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

164

Can we test this hypothesis?

Perhaps ...

169

Verbal Nonverbal Intelligence?

- Verbal / Nonverbal is a practical division
- Advantages of Verbal tests
 - they correlate with achievement because they have achievement in them
 - Information, Vocabulary, Arithmetic
- Advantages of Nonverbal Tests
 - they correlate with achievement without having achievement in them
 - they treat everyone the same
- These don't measure Verbal Intelligence and Nonverbal Intelligence- they measure general ability

Jack A. Naglieri, Ph.D. George

Nonverbal Assessment

- Nonverbal assessment describes the methods used to measure general intelligence, not nonverbal ability
- There is no assumption that nonverbal, as opposed to verbal, abilities are being measured
- general ability is measured using nonverbal tests so that a wide variety of individuals may be assessed using the same set of questions
 - a nonverbal test of general ability is considered more appropriate, or fair, for culturally and/or linguistically diverse populations
 - a nonverbal test holds much promise for opening doors to gifted culturally and linguistically diverse students

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

171

What does the WNV measure?

- The WNV is a test of general ability measured using nonverbal tests
- It is not a measure of nonverbal intelligence
 - measure general ability by using tests that do not require verbal skills
 - not “nonverbal ability”
 - measure “general ability” nonverbally

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

172

WNV Administration Manual Forward

In addition, the emphasis in the *WNV Manual* that the Full Scale measures *general ability nonverbally*—and *not* nonverbal ability—is an important distinction that further ties the WNV to Dr. Wechsler. Although his intelligence tests in the 1930s and 1940s departed from the one-score *Stanford-Binet* by offering separate Verbal and Performance IQs as well as a profile of scaled scores, Dr. Wechsler remained a firm believer in Spearman's *g* theory throughout his lifetime. He believed that his Verbal and Performance Scales represented different ways to access *g*, but he never believed in nonverbal intelligence as being separate from *g*. Rather, he saw the Performance Scale as the most sensible way to measure the general intelligence of people with hearing impairments, language disorders, or limited proficiency in English. And that is precisely what the WNV is intended to do.

A Teacher's Guide to Using the NNAT2

Jack A. Naglieri, PhD
Clare E. Killip
Kim L. Lohmeier

This Teacher's Guide will help you:

- understand how some gifted students may learn differently than others
- acquire specific strategies that connect the way gifted students learn best to the curriculum
- identify how to recognize and identify giftedness in your students

PEARSON

General Intelligence

Helping All Gifted Children Learn: A Teacher's Guide to Using the NNAT2

It is important to understand that even though Wechsler's intelligence (IQ) tests were organized into verbal and nonverbal sections, he did not mean that verbal and nonverbal are different types of ability. Wechsler (1958) explicitly stated that the organization of subtests into verbal and performance scales did *not* indicate that two distinctive types of intelligence were being measured. In fact, he

Jack A. Naglieri, Ph.D. George

General Intelligence

wrote: "the subtests are *different measures of intelligence*, not *measures of different kinds of intelligence*" (p. 64). Similarly, Naglieri (2003) further clarified that "the term nonverbal refers to the content of the test, not a type of ability" (p. 2). Thus, tests may differ in their content or specific demands, but still measure the concept of general intelligence.

Jack A. Naglieri, Ph.D. George

General Intelligence

Note

Wechsler (1975) included all of his intelligence tests under the umbrella term called *general ability*. He wrote "... the attributes and factors of intelligence, like the elementary particles in physics, have at once collective and individual properties" (p. 138). Even though a test may have questions that are verbal, quantitative, or nonverbal, they can be combined under the concept of general ability.

Jack A. Naglieri, Ph.D. George

Wechsler's Definition

• Definition of intelligence:

"The aggregate or global capacity of the individual to act purposefully, to think rationally, and to deal effectively with his environment (1939)"

David Wechsler, Ph.D.

Jack A. Naglieri, Ph.D. George

General Intelligence

- The meaning of general intelligence
 - "we did not start with a clear definition of general intelligence... [but] borrowed from every-day life a vague term implying all-round ability and... we [are] still attempting to define it more sharply and endow it with a stricter scientific connotation" (p. 53)".
 - *Intelligence Testing: Methods and Results* by Roudolf Pintner (1923)

Jack A. Naglieri, Ph.D. George

General Intelligence

- General ability is what allows people to solve a number of different kinds of problems that may involve words, pictures, or numbers
- These problems may involve
 - reasoning, memory, sequencing, verbal and math skills, patterning, connecting ideas across and within content areas, insights, making connections, drawing inferences, analyzing simple and complex ideas.

Addressing Underrepresentation of Gifted Minority Children Using the Naglieri Nonverbal Ability Test (NNAT)

Jack A. Naglieri
George Mason University

Donna Y. Ford
The Ohio State University

ABSTRACT

A persistent problem in education is the underrepresentation of diverse students in gifted education programs. Many educators attribute the poor participation of diverse students in gifted programs to the ineffectiveness of standardized tests in capturing the ability of these students. Thus, a primary agenda of school selection committees is to find more culturally sensitive measures. This study examined the effectiveness of the Naglieri Nonverbal Ability Test (NNAT) in identifying gifted Black and Hispanic students in comparison to White students. The sample was comprised of

attribute the problem to standardized tests, contending that these tests fail to assess the strengths and abilities of culturally, ethnically, and linguistically diverse populations (e.g., Frazier et al., 1995). Support for this assertion comes from reports showing that Black, Hispanic, and Native American students consistently score lower than White students on traditional standardized tests (Brody, 1992; Sattler, 1988). Despite the fact that intelligence tests such as the Wechsler Intelligence Scale for Children—Third Edition

PUTTING THE RESEARCH TO USE

Naglieri & Ford (2001)

- Sample:
 - 19,210 children (fall 1995 NNAT sample)
 - Grades K to 12
 - Representative of US according to:
 - geographic region
 - socioeconomic status
 - ethnicity
 - type of school setting (public or private)

189

Naglieri & Ford (2001)

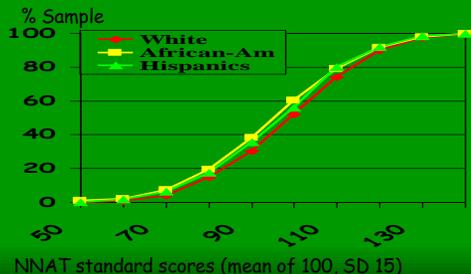

- Purpose of the study
 - to examine the differential hit rates for different groups of children identified as earning several high NNAT scores
 - Cumulative frequency distributions were obtained for White (n = 14, 316), Black (n = 2,880), and Hispanic (n = 2, 014) samples

Table 2
NNAT Scores

	White		Black		Hispanic		Expected
	n	%	n	%	n	%	
120 & above	1,571	10.3	269	9.4	190	9.5	9.0
125 & above	906	5.6	145	5.1	88	4.4	5.0
130 & above	467	2.5	75	2.6	46	2.3	2.0
135 & above	190	1.1	42	1.5	18	0.9	1.0
140 & above	90	0.6	19	0.6	9	0.4	0.4
Total Sample n	14,141		2,863		1,991		

Note. Expected percentage values are those associated with normal curve probabilities.

relations to achievement provided by Naglieri and Ronning (2009a, 2009b) to include an important examination of the differential rates of identification for diverse groups. These results are similar to previous studies of the NNAT and its earlier version, the MAT (Naglieri, 1985a, 1985b), which demonstrated that the instrument yielded small differences between majority and minority groups (Naglieri, 1985b; Naglieri & Ronning, 2000a). More importantly, however,

quently, provide access to gifted education services. The primary difference between the NNAT and other group ability tests is that the latter typically include verbal, quantitative, as well as nonverbal tests. Some researchers have argued that a general ability test with verbal and quantitative items is limited in utility because it demands English language skills and knowledge directly taught in school (Naglieri, 1999; Naglieri & Prewett, 1990). This study

Naglieri & Ford (2003)

• Conclusions

- distributions of scores were remarkably similar for white, African-American, and Hispanics
- Similar percentages of children were identified using a cut off score of 130 and 140
- NNAT can be used to assist when fair assessment of all children for gifted programs is desired

BRIEF REPORTS

Comparison of Hispanic Children With and Without Limited English Proficiency on the Naglieri Nonverbal Ability Test

Jack A. Naglieri, George Mason University Ashlee L. Booth, University of Virginia

Adam Weislin, George Mason University

(Note: This brief report summarizes the findings of the study described in the full report, which is available at <http://www.gmu.edu/~naglieri/>.)

Hispanic Children

- 148 Hispanic children with limited English language proficiency
 - 98 % from West and South
 - 53 % males
 - 82% Low and Low Middle SES
 - 41% Urban settings
- 148 Hispanic children without limited English language proficiency
 - 98 % from West and South
 - 53 % males
 - 82% Low and Low Middle SES
 - 41% Urban settings

WNV Case Studies

Case of Rosina – Is she mentally retarded?

Case of Gerry – Hearing Impairment and Learning Problems

Note: The names of children used in ALL these case studies have been changed to protect their identity.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

200

Case of Rosina

Recently Immigrated to the US
from Ghana

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

201

Case of Rosina

- Rosina is 7-years old who recently moved to the US
- Her family is originally from Ghana
- Twi was the primary language spoken at home, with some English spoken
- Prior to assessment a Twi interpreter was obtained to interpret educational tests.
 - The interpreter reported that Rosina did not comprehend informal or formal language in Twi

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

202

To case studies

Case of Rosina

- English Language Screening results -- Rosina is at a LEVEL 1 in English Language Proficiency
- She can comprehend
 - simple statements, questions and the general idea of basic messages and conversations
 - basic vocabulary and simple grammatical structures
- Rosina is beginning to acquire pre-reading skills while relying on visual cues

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

203

Case of Rosina

- Comprehension is limited to simple language containing high-frequency vocabulary and predictable language patterns
- Rosina's general ability, was measured by WNV
- *Processing was measured with the CAS*

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

209

To case studies

Case of Gary

What impact does his hearing impairment have on functioning?

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

210

Case of Gary

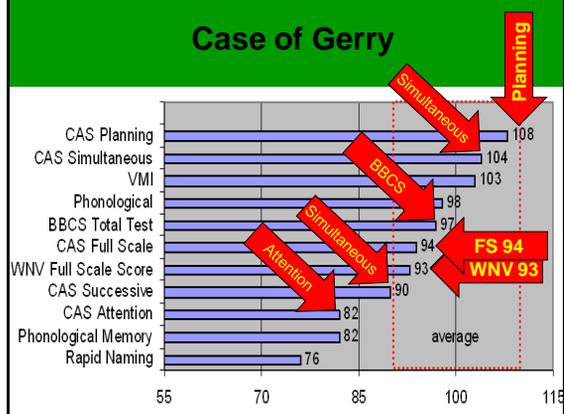

- Teachers are asking how much the hearing loss is influencing Gary's learning
- Is anything else going on?
- Teacher reports that Gary does show inattention problems in the classroom.

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

211

Case of Gerry

Case of Gerry

- WNV FS suggested Average ability
- CAS FS suggested Average ability but...
 - PASS scale analysis showed a cognitive processing disorder in ATTENTION
 - Low Attention - consistent with teacher report
- Gerry's attention problems in the class are related to his Attention processing weakness this may be compounded by his hearing loss

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

213

Case of Gerry

- **Conclusions**
- Cognitive processing disorder in Attention (CAS SS=82, 12th percentile rank)
 - Note that Gerry's Attention processing was measured using VISUAL tests that do not require hearing
 - Poor Attention can have an adverse impact on learning in the classroom if a student has difficulty with concentration, focusing on essential details of tasks and important information, resisting distraction, and sustaining attention and effort over time.

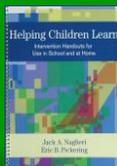

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

214

Case of Gerry

- Cognitive Interventions are needed to help Gerry
 - See Helping Children Learn handouts
 - Improving Inattention

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

215

216

Conclusions

- Nonverbal tests provide a culturally reduced way to measure general ability
- Nonverbal tests have excellent reliability and validity
- Nonverbal tests provide a way to measure general ability that does not require verbal and quantitative skills
- Nonverbal tests are useful for culturally and linguistically diverse populations

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.

217

Summary Nonverbal Tests

- Strong relationships to achievement
- Small Race / Ethnic differences
- Similar identification rates for gifted children
- Similar scores for children with limited English language skills

Slides by Jack A. Naglieri, Ph.D. naglieri@gmu.edu George Mason University. All images and data from WNV are copyright © 2006 by Harcourt Assessment, Inc. All rights reserved. Used with permission.
