

Social Justice, IQ tests and Identification of Gifted Students

Jack A. Naglieri –
 Research Professor,
 Univ. of Virginia
 jnaglieri@gmail.com
 www.jacknaglieri.com

Abstract

Traditional intelligence tests with their verbal, nonverbal, and quantitative content were developed for the US Military in the early 1900s. At that time, researchers noted that the accurate evaluation of intelligence for diverse populations, especially those with limited opportunity to learn and use English, was unjust. Intelligence testing was seen as a social justice issue then, and it remains one today.

Traditional IQ tests have a long history in gifted education. You will learn to recognize whether IQ (and ability) test questions measure thinking (ability) or knowing English. Questions that require knowledge of English are considered unjust.

Intelligence tests have played a critical role in determining eligibility for gifted services. In an increasingly diverse country, we must recognize that tests pose problems for those with limited educational opportunity and language skills.

Can we take English out to make them more just? Our research suggests yes.

JACKNAGLIERI.COM
 Assessment Tools for Psychologists and Educators

WELCOME TO JACKNAGLIERI.COM

This site was created to provide tools and resources for both psychologists and educators alike.

Jack A. Naglieri, PhD, is a Research Professor at the University of Virginia, Senior Research Scientist at the Devereux Center for Resilient Children, and Emeritus Professor of Psychology at George Mason University. With J.P. Das, he is well known for the PASS theory of intelligence and its application using the Cognitive Assessment System and Cognitive Assessment System-Second Edition.

WHAT'S NEW?

- Today's Handout**: Download today's handout from recent presentations.
- PASS Case Studies**: Case studies that illustrate ways to identify different processing disorders and interventions that can make a difference.
- 10-Minute Solutions**: Short published papers that describe applications of PASS theory to identify disabilities such as Dyslexia.
- CAS2 Speed/Fluency Scale**: New FREE Speed/Fluency Scale for the CAS2.
- Article Library**
- Videos**: Video library of interviews and webinars on

Conclusions

- Gifted identification based on verbal, nonverbal and quantitative tests requires too much verbal comprehension of DIRECTIONS, knowledge of English in the TEST ITEMS, and verbal expression in the ANSWERS to the questions
 - Students who come from low income families, are culturally different, or limited English skills are not assessed accurately
 - Many Hispanic and Black students are denied entry to gifted education and therefore they don't reach their potential
 - BUT...WE CAN DO BETTER !

Opportunity to learn and Test Bias

- According to the *Standards for Educational and Psychological Testing* (AERA, APA & NCME, 2014), if a person has had limited opportunities to learn the content in a test of intelligence, that test may be considered **unfair because** it penalizes students for not having learned the content
- **Equitable assessment** can be achieved if all examinees have equal opportunity to perform
- The Standards also remind us that **even if the norming data do not demonstrate psychometric bias tests can still be considered unfair.**

Addressing Underrepresentation of Gifted Minority Children Using the Naglieri Nonverbal Ability Test (NNAT)

Jack A. Naglieri
George Mason University

Donna Y. Ford
The Ohio State University

ABSTRACT
A persistent problem in education is the underrepresentation of diverse students in gifted education programs. Many educators attribute the poor participation of diverse students in gifted programs to the ineffectiveness of standardized tests in capturing the abilities of these students. Thus, a primary agenda of school selection committees is to find more culturally sensitive measures. This study examined the effectiveness of the Naglieri Nonverbal Ability Test (NNAT) in identifying gifted Black and Hispanic students in comparison to White students. The sample was comprised of

attribute the problem to standardized tests, contending that these tests fail to assess the strengths and abilities of culturally, ethnically, and linguistically diverse populations (e.g., Frazier et al., 1995). Support for this assertion comes from reports showing that Black, Hispanic, and Native American students consistently score lower than White students on traditional standardized tests (Boddy, 1992; Sankar, 1988).
Despite the fact that intelligence tests such as the Wechsler Intelligence Scale for Children-Third Edition

PUTTING THE RESEARCH TO USE

Very Similar percentages of Black, White and Hispanic students earned a standard score of 125 (95th percentile) or above

Introducing Three Tests for Measuring General Ability Equitably

- Dina Brulles, Kim Lansdowne and I have constructed three new tests that will be used for identification of gifted students
- The focus of these tests is **EQUITABLE ASSESSMENT** of all students
- Three measures of general ability with three Verbal, Nonverbal and Quantitative content
 - Naglieri **Nonverbal** (Naglieri, 2021)
 - Naglieri **Verbal** (Naglieri & Brulles, 2021)
 - Naglieri **Quantitative** (Naglieri & Lansdowne, 2021)

Dr. Jack A. Naglieri (University of Virginia) Dr. Kimberly Lansdowne (Arizona State University) Dr. Dina Brulles (Paradise Valley USD)

Goals in Making the General Ability Test Battery

- Take language out of test INSTRUCTIONS and student RESPONSE and take formal KNOWLEDGE out of the items
- Create a Verbal test that can be solved using any language
 - The test is based on a neuropsychological concept from A. R. Luria which demand identification of verbal concepts
- Create a new version of nonverbal matrices
 - New ways of constructing progressive matrices have been developed which demand understanding the relationships among graphical stimuli
- Create a Quantitative test that does not require language
 - Several types of items are used to evaluate how well a student understands quantitative relationships

For more information: jnaglieri@gmail.com www.jacknaglieri.com

Measure Thinking not Knowledge

- How does the student have to think to complete a task?
 - This is dependent on the brain

- What does the student have to know to complete a task?
 - This is dependent upon educational opportunity

For more information: jnaglieri@gmail.com www.jacknaglieri.com

Description of the Verbal, Nonverbal and Quantitative Measures of General Ability

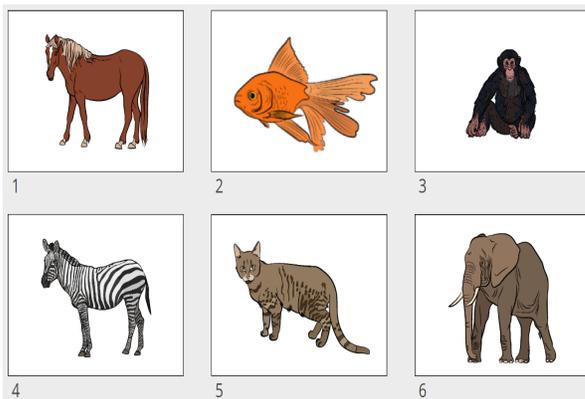

Naglieri Verbal: Naglieri & Brulles (2021)

Naglieri Nonverbal: Naglieri (2021)

Naglieri Quantitative: Naglieri & Lansdowne (2021)

27

Verbal Measure of General Ability

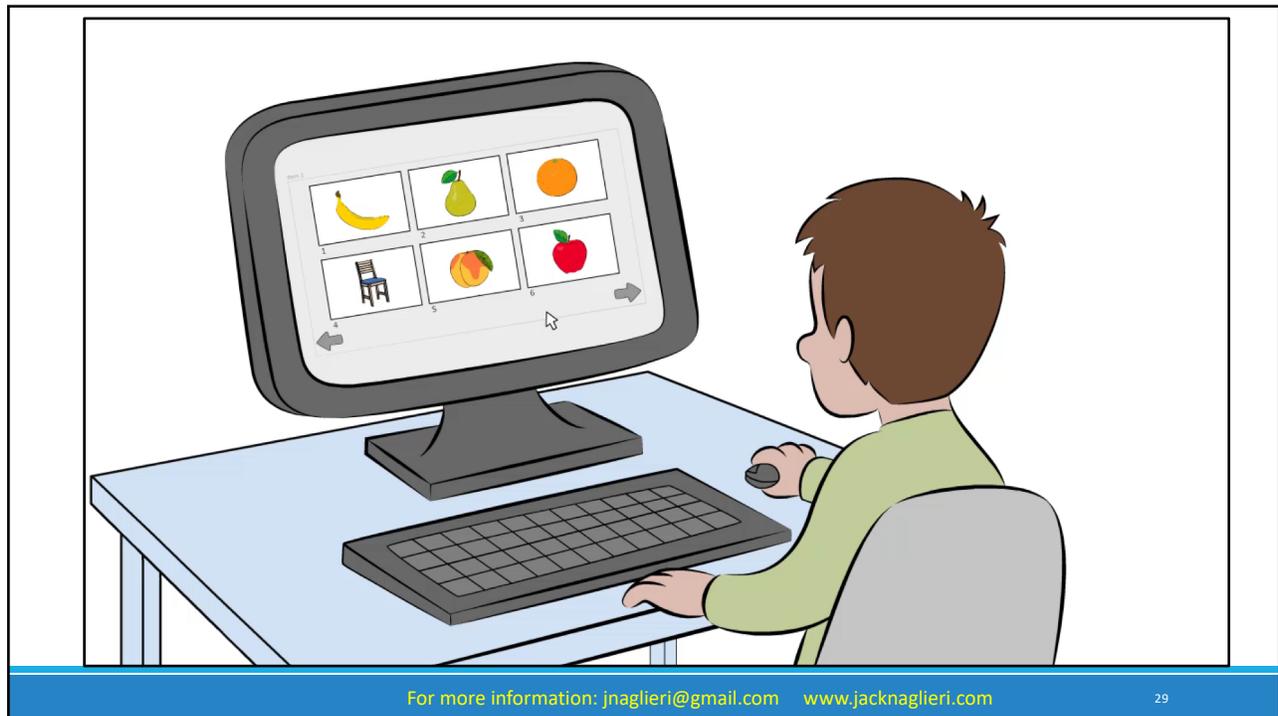

- Online and paper version
- Classroom and individual administration
- Animated instructional video
- Minimal verbal directions by administrator
- Interactive practice questions
- 3 different test forms:
 - Kindergarten – Grade 2,
 - Grade 3-6, Grade 7-12

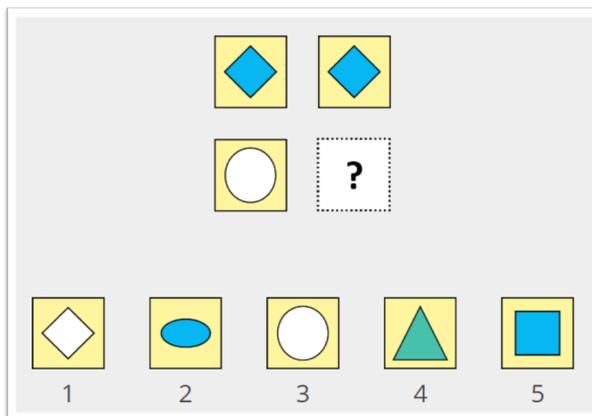

Authors: Jack Naglieri & Dina Brulles

For more information: jnaglieri@gmail.com www.jacknaglieri.com

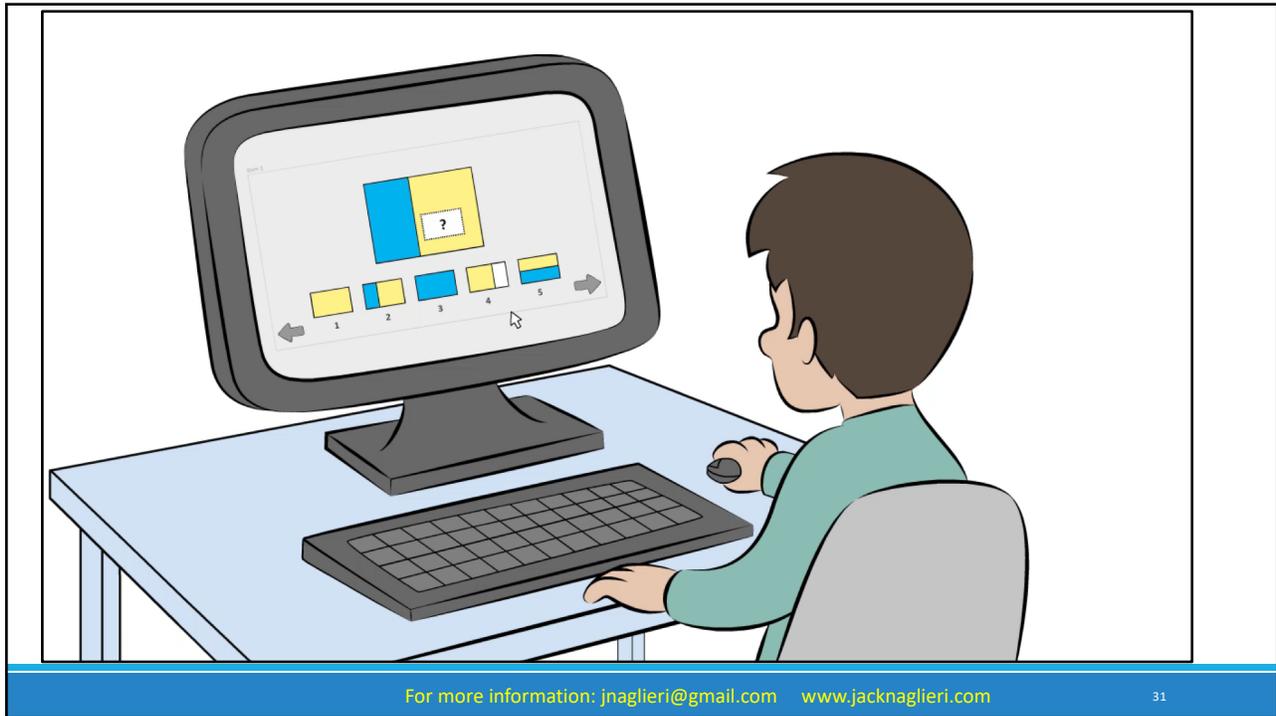

28

Nonverbal Measure of General Ability

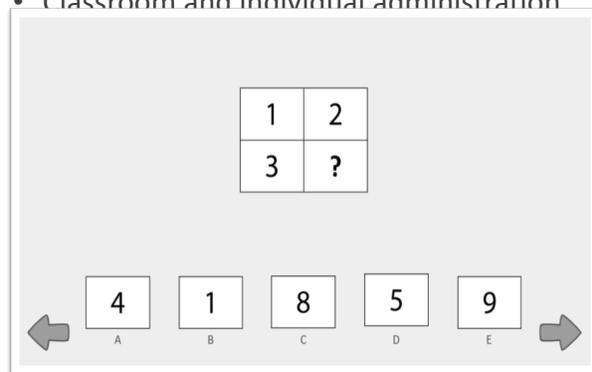

- Online and paper versions
- Group or individual administration
- Several NEW types of items have been developed
- Animated instructional video
- Interactive practice questions
- Minimal verbal directions
- Pre-K, Kindergarten, Grade 1, Grade 2, Grade 3/4, Grade 5/6, Grade 7-9, Grade 10-12

Quantitative Measure of General Ability

- These items demand analysis of sequences of numbers or relationships among a group of numbers. For example, 1 is to 2 (a difference of 1) as 3 is to ... 4. Alternatively, the items can be solved by simply recognizing that the when analyzed vertically, 1 becomes 3, so 2 should become 4.
 - These items test a person's ability to understand relationships and patterns involving numbers, just as understanding relationships among shapes in the NAT-Nonverbal or verbal categories in the NAT-Verbal.
- Online and paper version
 - Classroom and individual administration

Authors: Jack Naglieri & Kim Lansdowne

Research Results

- Verbal (N = 2,482)
- Nonverbal (N = 3,630)
- Quantitative (N = 2,841)
- Three replications with the same results
- 'Little to no differences ... across race, ethnicity, gender, & parental education level'

Achieving Equity: Race, Ethnic, Gender, and Parental Education Level Differences on Verbal, Nonverbal, and Quantitative Naglieri General Ability Tests

Mathangi Selvamenan¹, Angelina Paolozza¹, Joanna Solomon¹, Jack A. Naglieri², and Matthew T. Schmidt¹

T. Schmidt¹

Abstract

Equitable identification of gifted students, from diverse cultural, racial, ethnic, linguistic, and socioeconomic backgrounds, or from those who have had limited or different educational experiences, has been an ongoing concern. Researchers have suggested that the inclusion of test questions that demand knowledge and language in ability tests can be problematic for traditionally underrepresented groups who have had limited or early opportunities to learn. The present study (N=8410) was conducted to examine the utility of three tests with verbal, nonverbal, and quantitative content that were specifically created to measure general ability in the most equitable manner possible. Little to no differences were found across race, ethnicity, gender, and parental education level on all three measures. Our results suggest that the confounding impact of knowledge and language, particularly in the instructions, test content, and response format, can be minimized to achieve a more equitable method of assessing diverse populations for gifted programs.
