A Fundamental Weakness of Intelligence Tests

Historical Context

The American Psychological Association Apology

How to Interpret Intelligence Tests

Closing remarks

The BIG picture

- **Equitable Identification of gifted students is a critical issue**
- **Intelligence tests have played an important and significant role in gifted identification and led to exclusion of students of color**
- **Understanding WHY we measure intelligence the way we do helps us understand what makes a test equitable**
- **It is important to differentiate test BIAS from test EQUITY**
- **Test EQUITY is about the CONTENT of the test questions**
- **Tests can be evaluated based on EQUITY**
- **The most equitable tests measure how well a student can THINK in a way that is not influenced by EXPERIENCE AND EXPOSURE - what they KNOW**

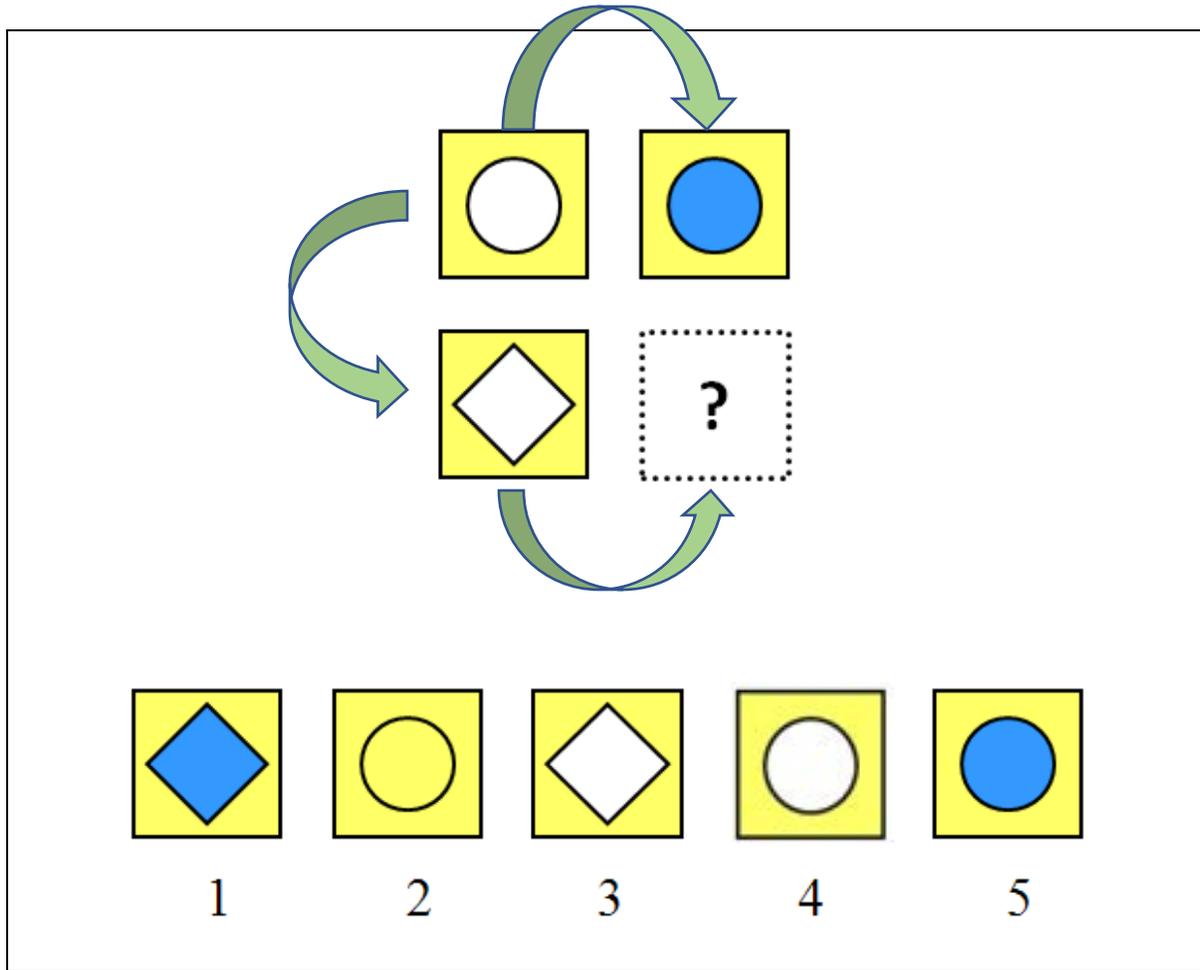

Traditional IQ and Achievement Tests

- Working as a school psychologist in 1975 noticed that some of the questions on the Wechsler intelligence tests were VERY similar to questions on the achievement tests (e.g., Vocabulary et al.,)
- **It seemed wrong to measure 'intelligence' using questions that clearly demanded knowledge and exposure/experience**
- **Shouldn't an intelligence test measure thinking rather than knowing?**

1975 Charles Champagne Elementary, Bethpage, NY

Tests that Measure Thinking or Knowing?

Girl is woman as
boy is to _____?

3 is to 6 as
4 is to _____?

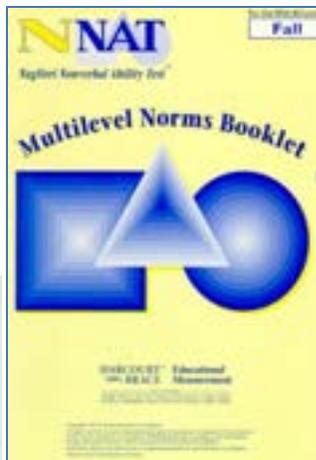

C⁷ is to F as
E⁷ is to _____?

Naglieri's Nonverbal Tests: 1985 to Present

- **Research on Six** Versions of the Naglieri Nonverbal Tests

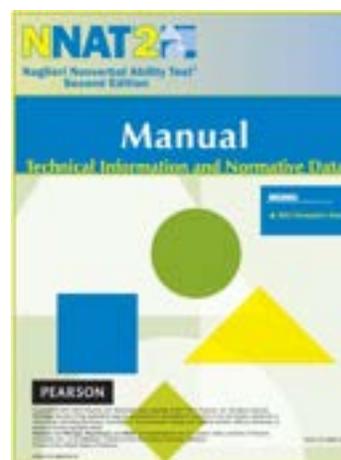

MAT Short and Expanded Forms 1985

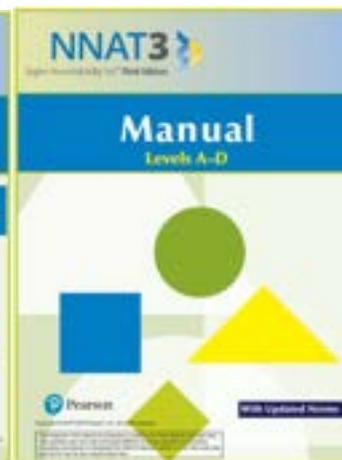

Naglieri Nonverbal Ability Test 1997

NNAT-Individual, 2003

NNAT-2 2008

NNAT3 2016

Each of these versions of the NNAT showed similar scores by RACE, ETHNICITY, & SEX and had strong correlation with achievement

This research convinced me that measuring intelligence using test questions that measured how well a student can think was a valid and equitable way to measure general intelligence 'g'.

Tests with Equity as a Goal 1985-Present

Traditional Tests

1. Naglieri, J. A. (1985). *Matrix Analogies Test - Expanded Form*. San Antonio: The Psychological Corporation.
2. Naglieri, J. A. (1985). *Matrix Analogies Test - Short Form*. San Antonio: The Psychological Corporation.
3. Naglieri, J. A. (1997). *Naglieri Nonverbal Ability Test*. San Antonio, TX: The Psychological Corporation.
4. Naglieri, J. A., & Bardos, A. N. (1997). *General Ability Scale for Adults*. San Antonio, TX: Pearson.
5. Naglieri, J. A. (2003). *Naglieri Nonverbal Ability Test - Individual Form*. San Antonio, TX: Pearson.
6. Wechsler, D., & Naglieri, J. A. (2006). *Wechsler Nonverbal Scale of Ability*. San Antonio, TX: Pearson.
7. Naglieri, J. A. (2008). *Naglieri Nonverbal Ability Test – 2nd Edition*. San Antonio, TX: Pearson.
8. Naglieri, J. A. (2016). *Naglieri Nonverbal Ability Test – Third Edition*. San Antonio, TX: Pearson.

Second Generation

9. Naglieri, J. A., & Das, J. P. (1997). *Cognitive Assessment System*. Austin: ProEd
10. Naglieri, J. A., Das, J. P., Goldstein, S. (2014). *Cognitive Assessment System Second Edition*. Austin, ProEd.
11. Naglieri, J. A., Das, J. P., & Goldstein, S. (2014). *Cognitive Assessment System Second Edition - Brief*. Austin, ProEd.
12. Naglieri, J. A., Moreno, M. A., & Otero, T. M. (2017). *Cognitive Assessment System – Español*. Austin, ProEd.
13. Naglieri, J. A. (2022). *Naglieri General Ability Test: Nonverbal*. Markham, Canada: MHS.
14. Naglieri, J. A. & Brulles, D. (2022). *Naglieri Ability Test: Verbal*. Markham, Canada: MHS.
15. Naglieri, J. A. & Lansdowne, K. (2022). *Naglieri Ability Test: Quantitative*. Markham, Canada: MHS.

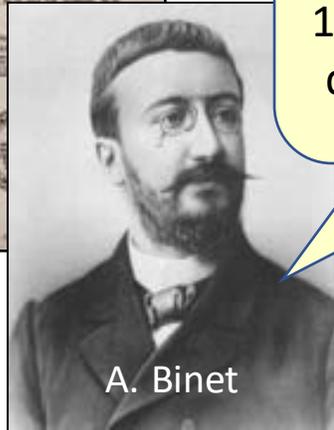

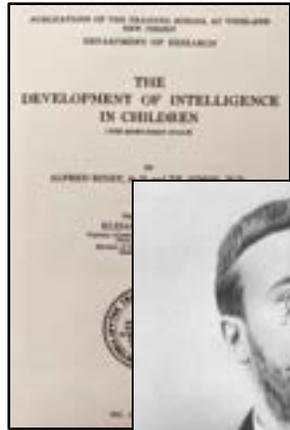

Two Questions:

1. Why do we measure ability the way we do?
2. Do the tests measure thinking or knowing?

The early history of IQ tests provides the answers.

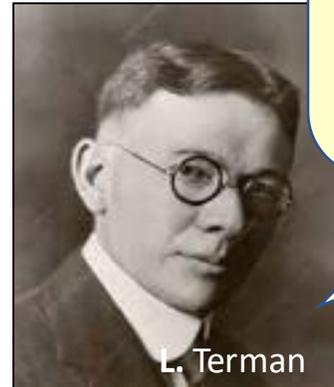

Binet → Stanford-Binet → Army Mental Tests → WISC, CogAT, Olsat

A. Binet

When working on the 1911 scale, Binet removed items from 1908 scale because 'they depended too much on school learning'

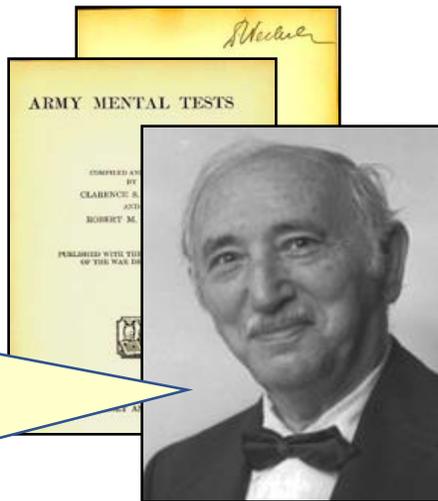

L. Terman

Terman added items dependent upon school learning in the 1916 Stanford-Binet because he believed 'intelligence at the verbal and abstract levels is the highest form of mental ability'.

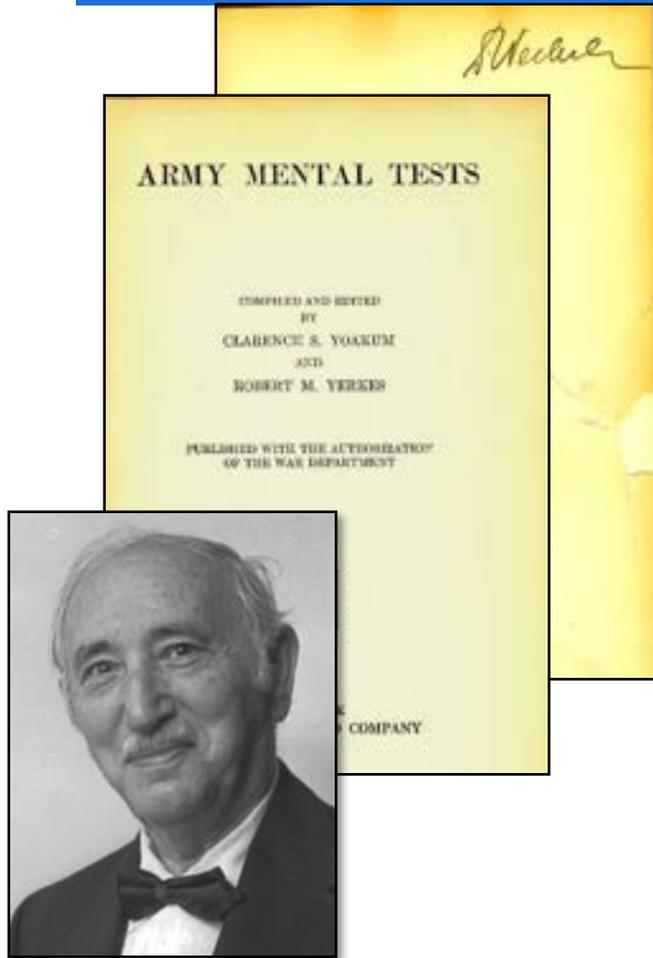

Arthur Otis (Terman's student) was instrumental in the development of the U.S. Army Alpha (Verbal & Quantitative) and Beta (Nonverbal) and the Otis-Lennon Ability Test

Wechsler based his intelligence test on the U.S. Army Mental Tests (Verbal, Quantitative & Nonverbal)

Alpha & Beta → Wechsler Included Knowledge

• Army Alpha

- Synonym- Antonym
- Disarranged Sentences
- Number Series
- Arithmetic Problems
- Analogies
- Information

Verbal &
Quant IQ
(Knowledge)

• Army Beta

- Maze
- Cube Imitation
- Cube Construction
- Digit Symbol
- Pictorial Completion
- Geometrical Construction

Nonverbal
IQ
(Thinking)

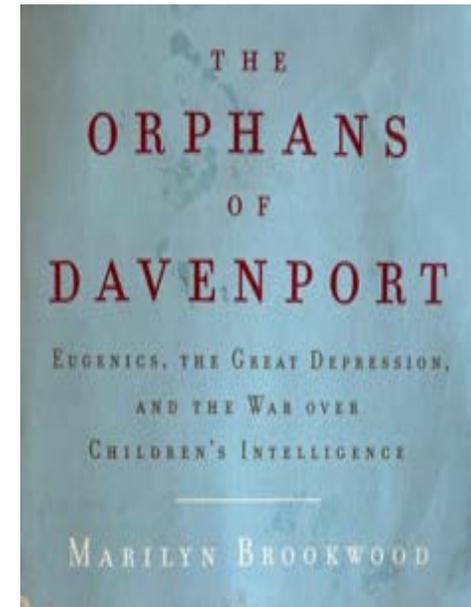

WISC,
WJ
CogAT &
Otis-
Lennon

Including *Knowledge* in “Ability” Tests & Equity

| Stanford-Binet-5 | WISC-V | WJ-IV | KABC-II | OLSAT | CogAT |
|---|--|---|--|---|---|
| <ul style="list-style-type: none"> • Verbal • Knowledge • Quantitative Reasoning • Vocabulary • Verbal Analogies | <ul style="list-style-type: none"> • Verbal Comprehension Vocabulary, Similarities, Information & Comprehension • Fluid Reasoning Figure Weights, Arithmetic | <ul style="list-style-type: none"> • Comprehension Knowledge: Vocabulary & General Information • Fluid Reasoning: Number Series & Concept Formation • Auditory Processing: Phonological Processing | <ul style="list-style-type: none"> • Knowledge / GC • Riddles, • Expressive Vocabulary, • Verbal Knowledge | <ul style="list-style-type: none"> • Verbal • Following directions • Verbal Reasoning • Quantitative • Verbal Arithmetic Reasoning | <ul style="list-style-type: none"> • Verbal Scale • Analogies • Sentence Completion • Verbal Classification • Quantitative • 45 pages of oral instructions |

IQ Tests Role in Promoting Racism

- Lewis Terman – promoter of eugenics (Greek for good birth) and Stanford-Binet (1916) author wrote that his test would reveal “significant racial differences in general intelligence...which cannot be wiped out by any culture”
- He advocated that identification of low-intelligence children and adults who would be involuntarily institutionalized and *sterilized would improve society*. (p. 68, Brookwood, 2021)
- His emphasis on VERBAL as the highest form of intelligence distorted the evaluation of intelligence for countless numbers of people

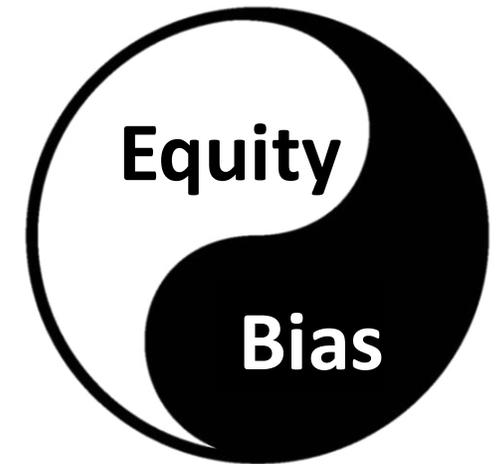

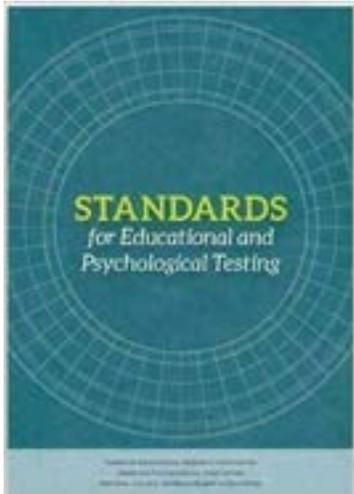

- ‘APA recognizes the roles of psychology in promoting...racism, and the harms that have been inflicted on communities of color ... and the ways measurement of intelligence has been systemically used to create the ideology of White supremacy.’
 - Throughout the 1900s prominent psychologists involved in IQ test development supported eugenics
 - In 1916 Lewis Terman *Stanford-Binet* author advocated an educational system which separated white children from Blacks, Mexicans and Native Americans
 - 1933 Raymond Cattell (CHC & WJ) spoke out against race mixing and he lobbied to overturn the 1954 Brown v. Board Education
- What impact has this had on identification of GIFTED STUDENTS?

Test Content, Test Bias, and Test Equity

According to the *Standards for Educational and Psychological Testing* (AERA, APA, & NCME, 2014) Psychometric TEST BIAS and EQUITY are two different ways of measuring test fairness.

- ... if a person has had limited opportunities to learn the content in a test of intelligence, *that test may be considered unfair* ... even if there is no evidence of psychometric test bias.
- Evidence of EQUITY is examined by test content and mean score differences.

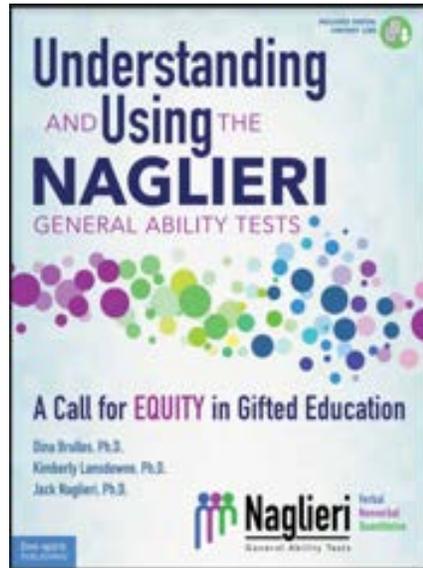

The test you choose determines the results you receive, the decisions you make, *and the future of that student.*

That is the *Practical Impact* of test selection.

Race and Ethnic Average Score Differences by Ability Test

Traditional tests that include knowledge and 2nd-Generation Ability Tests that minimize knowing

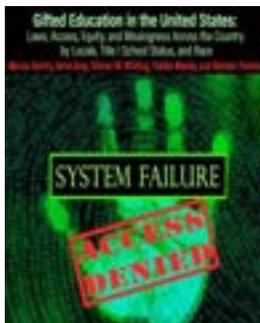

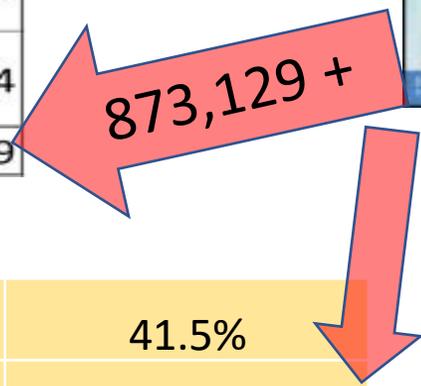

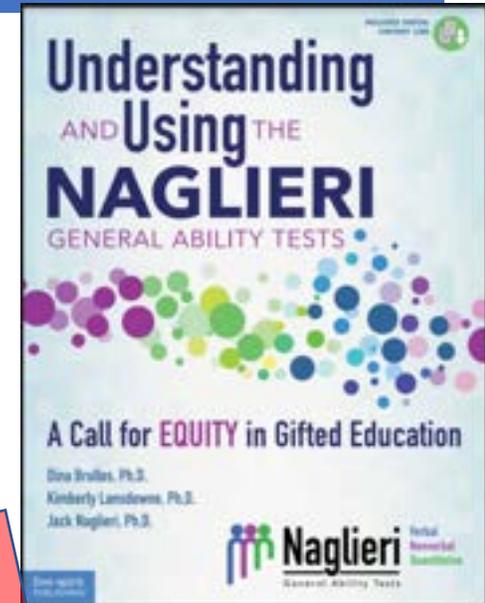

See Brulles, D., Lansdowne, K. & Naglieri, J. A. (2022). Understanding and Using the Naglieri General Ability Tests: A Call to Equity in Gifted Education. Minneapolis, MN: Free Spirit Publishing for more details.

Note: Even though a test may not show psychometric bias those tests with academic content that show large mean score differences are not equitable and are unfair.

| | By Race | By Ethnicity |
|---|-----------------|-----------------|
| Tests that require knowledge | Mn = 9.5 | Mn = 5.2 |
| Otis-Lennon School Ability Test (distric wide) | 13.6 | |
| Stanford-Binet IV (normative sample) | 12.6 | |
| WISC-V (normative sample) | 11.6 | |
| WJ- III (normative sample) | 10.9 | 10.7 |
| CogAT7 (Nonverbal scale) | 11.8 | 7.6 |
| CogAT7 - Verbal | 6.6 | 5.3 |
| CogAT7-Quantitative | 5.6 | 3.6 |
| CogAT- Nonverbal | 6.4 | 2.9 |
| CogAT-Total (V, Q & NV) | 7.0 | 4.5 |
| WISC-V (statistical controls normative sample) | 8.7 | |
| Tests that require minimal knowledge | Mn = 4.3 | Mn = 2.9 |
| K-ABC (normative sample) | 7.0 | |
| K-ABC (matched samples) | 6.1 | |
| KABC-II (adjusted for gender & SES) | 6.7 | 5.4 |
| CAS-2 (normative sample) | 6.3 | 4.5 |
| CAS (statistical controls normative sample) | 4.8 | 4.8 |
| CAS-2 (statistical controls normative sample) | 4.3 | 1.8 |
| CAS-2 Brief (normative samples) | 2.0 | 2.8 |
| NNAT (matched samples) | 4.2 | 2.8 |
| Naglieri General Ability Test-Verbal | 2.2 | 1.6 |
| Naglieri General Ability Test-Nonverbal | 1.0 | 1.1 |
| Naglieri General Ability Test-Quantitative | 3.2 | 1.3 |
| Note: The results summarized here were reported for the Otis-Lennon School Ability Test by Avant and O'Neal (1986); Stanford-Binet IV by Wasserman (2000); Woodcock-Johnson III race differences by Edwards and Oakland (2006) and ethnic differences by Sotelo-Dynega, Ortiz, Flanagan, and Chaplin (2013); CogAT7 by Carman, Walther and Bartsch (2018) and Lohman (2016). WISC-V by Kaufman, Raiford, and Coalson (2016); Kaufman Assessment Battery for Children-II by Lichtenberger, Volker, Kaufman & Kaufman, (2006); CAS by Naglieri, Rojahn, Matto, and Aquilino (2005); CAS-2 and CAS2: Brief by Naglieri, Das, and Goldstein, 2014a and 2014b; Naglieri Nonverbal Ability Test by Naglieri and Ronning (2000), and Naglieri General Ability Tests by Naglieri, Brulles, and Lansdowne (2022). | | |

Numbers of Gifted Students Missed = 1,235,434

| Total Enrollments by Race and Ethnicity as of 2020. | | | | |
|---|------------------------------------|-------------------------------------|-------------------------------|---|
| | N in Public Education K-12 in 2020 | N Potentially Gifted (8%; 92 %tile) | N Students in gifted programs | Difference Between Potential and Identified |
| White | 23,834,458 | 1,906,757 | 1,937,350 | 30,593 |
| Black | 7,754,506 | 620,360 | 330,774 | -289,586 |
| Hispanic | 14,337,467 | 1,146,997 | 600,498 | -546,499 |
| Native American/ Alaska Native | 484,766 | 38,781 | 27,712 | -11,069 |
| Two or More Races | 1,641,817 | 131,345 | 105,371 | -25,974 |
| Total Non-Whites | 24,218,556 | 1,937,484 | 1,064,355 | -873,129 |

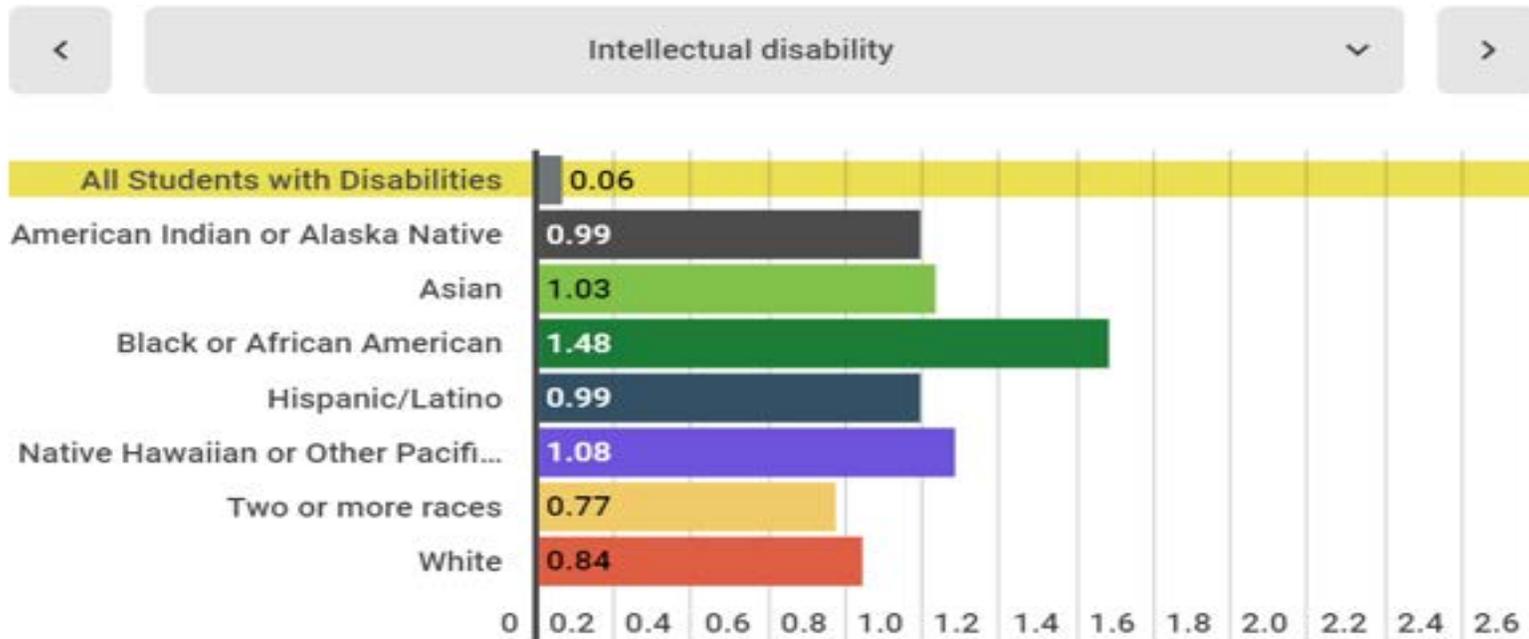

| | |
|---|----------------------|
| Percent of Schools that do not Identify | 41.5% |
| Additional non-white gifted students = 41.5% of 873,129 | N = 362,305 |
| Total non-white gifted students missed | N = 1,235,434 |

OSEP Fast Facts: Race and Ethnicity of Children with Disabilities Served under IDEA Part B

For the purposes of this fact sheet, racial ethnic groups are defined in the IDEA Part B Child Count and Educational Environments for School Year 2019-2020, OSEP Data Documentation. <https://www2.ed.gov/programs/osepidea/618-data/collection-documentation/data-documentation-files/part-b/child-count-and-educational-environment/idea-partb-childcountandedenvironment-2019-20.pdf>

Risk Ratio of Students with Disabilities by Disability Category and by Specific Race and Ethnicity, Ages 5 (in kindergarten) through 21: SY 2019-20

The relative risk ratio of students with disabilities under IDEA by race and Ethnicity is the probability of a student with a disability being identified for intellectual disability. The higher the number, the larger the probability. Nationally, **Black Students are 1.48 times more likely to be identified with intellectual disability** compared to all students with disabilities.

Academic Learning Loss & COVID

- COVID-19 has increased the impact of disparities in access and opportunity for students of color and they are even further behind than they were before.
- Their **scores on traditional intelligence tests** which demand knowledge **are even more inaccurate.**
- **Solutions:**
 - For traditional tests, **use post-COVID norms only.**
 - Use intelligence tests that are not dependent upon knowledge

Education in a Pandemic: The Disparate Impacts of COVID-19 on America's Students. US Dept. of Ed- Office of Civil Rights. June, 21, 2021. <https://www2.ed.gov/about/offices/list/ocr/docs/20210608-impacts-of-covid19.p>

Psychologists who studied race and ethnic differences attributed IQ test results to the **people** instead of the **tests**.

That is the Practical Impact of flawed intelligence tests.

Equality

Equity

To be responsive is to address a NEED!

Can a Traditional Intelligence Test of General Ability be Equitable?

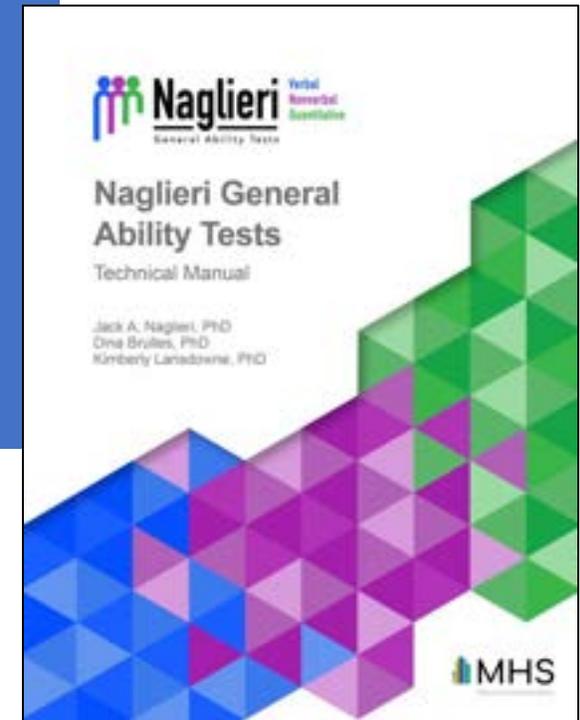

Measure 'Thinking' with minimal influence of 'Knowing'.

The Naglieri General Ability Tests: Verbal, Nonverbal and Quantitative

VERBAL - Dina Brulles, Ph.D. dbrulles@gmail.com

NONVEBAL - Jack A. Naglieri, Ph.D. jnaglieri@gmail.com

QUANTITATIVE - Kim Lansdowne, Ph.D. Kimberly.Lansdowne@asu.edu

Naglieri General Ability Tests

Jack A. Naglieri, Dina Brulles & Kimerly Lansdowne (2022)

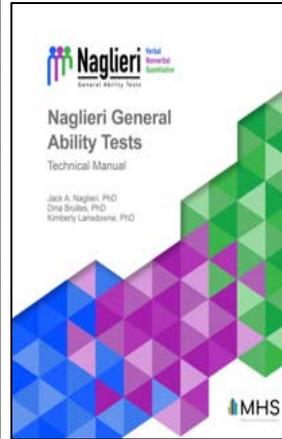

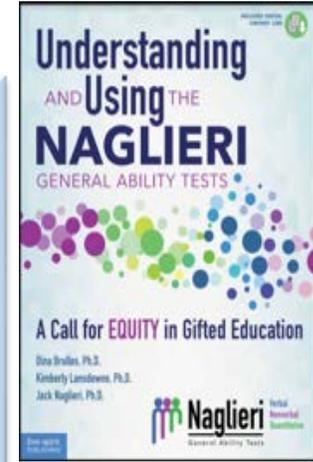

- We **explicitly made tests for equitable identification** of students from diverse cultural, linguistic, or socioeconomic backgrounds using the traditional Verbal, Nonverbal and Quantitative formats to **measure general ability**:

- Animated instructions remove the need for verbal comprehension of directions,
- Test questions that do not require academic knowledge,
- Verbal and Quantitative test questions that can be solved using any language,
- A multiple-choice response removes the need for verbal expression.

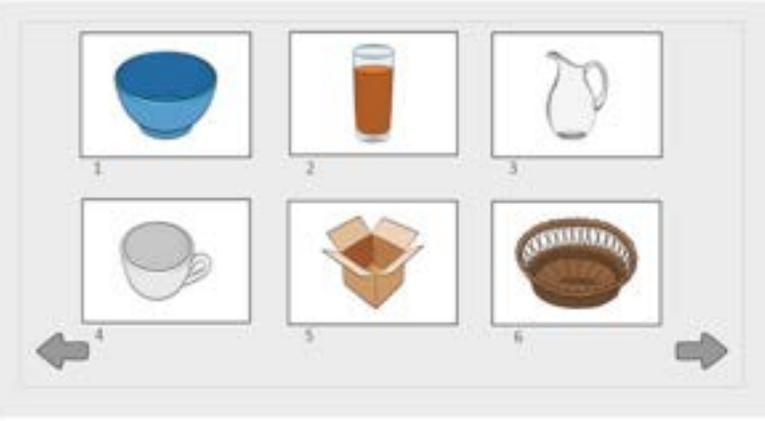

Naglieri General Ability Tests

Three tests of general ability that measure how well a student can *think* to arrive at the answer rather than what they *know*.

 **Naglieri** | Verbal
General Ability Tests

 **Naglieri** | Nonverbal
General Ability Tests

 **Naglieri** | Quantitative
General Ability Tests

Three Research Studies

Selvamenan, M., Paolozza, A., Solomon, J., Naglieri, J. A., & Schmidt, M. T. (submitted for publication, 2022). Race, Ethnic, Gender, and Parental Education Level Differences on Verbal, Nonverbal, and Quantitative Naglieri General Ability Tests: Achieving Equity.

• VERBAL SAMPLE

- 2,482 That closely matches the US population on key demographics

• GENDER

- **No differences** between **males** and **females** for raw score across all forms

• RACE/ETHNICITY

- **No differences** among **White, Black, & Hispanic** for raw score across all forms

• PARENTAL EDUCATION LEVEL

- **No differences** among five education levels (**No high school diploma; High School graduate; Some college/Associate's degree; Bachelor's degree; Graduate/professional degree**) for raw score across all forms

• NONVERBAL SAMPLE

- 3,630 That closely matches the US population on key demographics

• GENDER

- **No differences** between **males** and **females** for raw score across all forms

• RACE/ETHNICITY

- **No differences** among **White, Black, & Hispanic** for raw score across all forms

• PARENTAL EDUCATION LEVEL

- **No differences** among five education levels (**No high school diploma; High School graduate; Some college/Associate's degree; Bachelor's degree; Graduate/professional degree**) for raw score across all forms

• QUANTITATIVE SAMPLE

- 2,841 That closely matches the US population on key demographics

• GENDER

- **No differences** between **males** and **females** for raw score across all forms

• RACE/ETHNICITY

- **No differences** among **White, Black, & Hispanic** for raw score across all forms

• PARENTAL EDUCATION LEVEL

- **No differences** among five education levels (**No high school diploma; High School graduate; Some college/Associate's degree; Bachelor's degree; Graduate/professional degree**) for raw score across all forms

General Ability Tests

“We did not start with a clear definition of general intelligence... [but] borrowed from every-day life a vague term implying all-round ability and... we [are] still attempting to define it more sharply and endow it with a stricter scientific connotation (Pintner, 1923 p. 53)”.

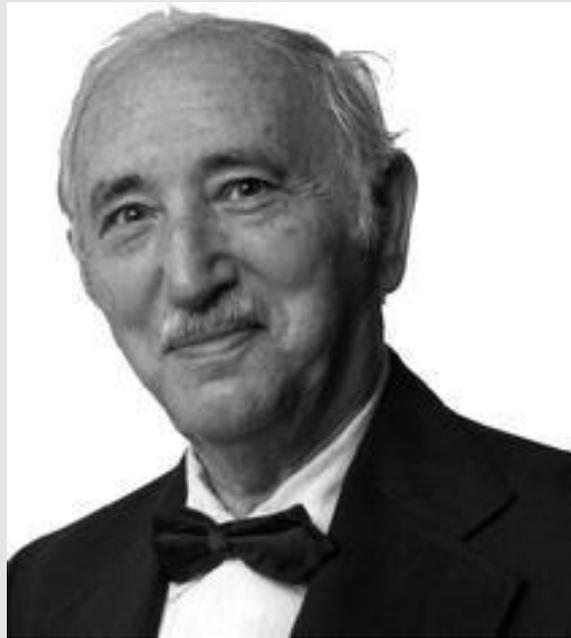

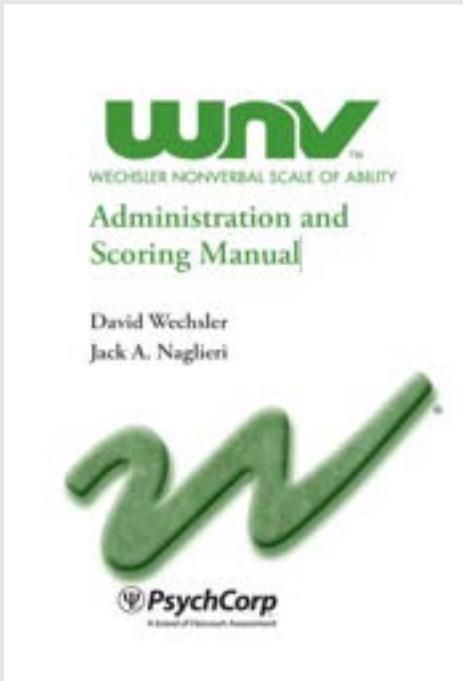

“The aggregate or global capacity of the individual to act purposefully, to think rationally, and to deal effectively with his environment. (1939)”

General Ability
not verbal or
nonverbal
intelligences !

The emphasis in the *WNV Manual* that the Full Scale measures *general ability nonverbally*—and *not* nonverbal ability—ties the WNV to Dr. Wechsler

Dr. Wechsler remained a firm believer in Spearman's *g* theory ... He believed that his Verbal and Performance Scales represented different ways to access *g*, but he never believed in nonverbal intelligence as being separate from *g*.

He saw the Performance Scale as the most sensible way to measure the general intelligence of people with ... limited proficiency in English.

Quotes from Alan S. Kaufman in the Wechsler Nonverbal Manual; Wechsler & Naglieri (2006)

Support for 'g'

What is the Practical Impact?

Verbal, Nonverbal, and Quantitative scales are NOT different types of intelligence; these terms describe the *content of the test questions*

Don't just tell a different version of the same story.

Change The Story!

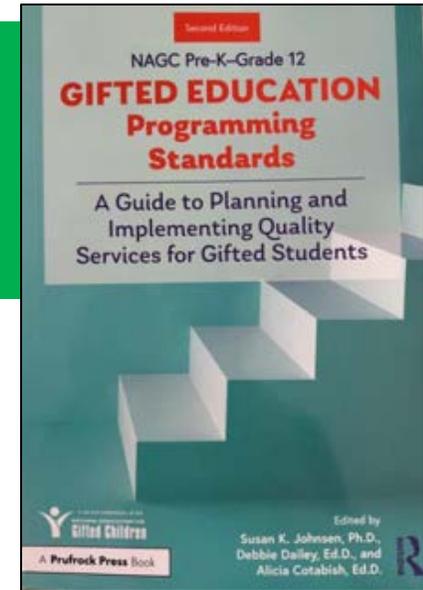

NAGC Professional Standards

2.2. *Identification.* Students with gifts and talents are identified for services that match their interests, strengths, and needs.

2.2.5. Educators select assessments that minimize bias by including information in the technical manual that describes content in terms of potential bias, includes norms that match national census information or local populations, shows how items discriminate equally well for each group, and provides separate reliability and validity information for each group.

2.3. *Identification.* Students with identified gifts and talents represent diverse backgrounds.

2.3.1. Educators select and use equitable approaches and assessments that minimize bias for referring and identifying students with gifts and talents, attending to segments of the population that are frequently hidden or underidentified. Approaches and tools may include front-loading talent development activities, universal screening, using locally developed norms, assuring assessment tools are in the child's preferred language for communication, or nonverbal formats.

Summary: Equitable Assessment of Intelligence

- **Equitable evaluation of intelligence** demands test questions that can be solved regardless of the amount of academic knowledge and facility with language a student has
- We have shown that
 - General ability (*g*) **can be measured equitably** across Verbal, Quantitative and Nonverbal content if the tests do not require academic knowledge
- Verbal, Quantitative and Nonverbal are **a description of the content of the tests'** questions **NOT** different types of intelligence
- Equitable tests measure THINKING in a manner that is minimally influenced by KNOWING

WE CAN DO
