Date Administered: _____

Vaccination Expiration Date: _____

Vaccine Type: (Killed or Recombinant) _____

Exposure: (Initial Dose or Booster Dose) _____

Manufacturer: _____

Product Name: _____

Lot/Serial Number: _____

Lot/Serial Expiration: _____

Please send a copy of the pet's rabies certificate in this email. If we are giving the rabies here during the inspection appointment, we will create the rabies certificate and submit it for you. Keep in mind for most international travel, most countries have a 20-30 day waiting period for travel after the rabies vaccine is given.

VACCINATION HISTORY: We highly suggest all pets 6 weeks and older be current on their DHPP or DHLPP-C vaccines, as well as all pets 8 weeks and older be current on their bordetella vaccines. These vaccines are not required for domestic travel but are HIGHLY recommended. If we need to update any vaccines please let us know.

TESTING HISTORY: It is always HIGHLY recommended to have heartworm, and intestinal testing on file when traveling internationally. Tests such as fecal floats, heartworm tests, or 4DX tests can be run the same day as the animal's inspection and noted on the certificate of veterinary inspection. (4DX tests check for heartworms and three tick-borne diseases).

PREVENTATIVES: We HIGHLY recommend having your pet on preventatives for heartworms, fleas, ticks, and intestinal parasites year round in South Texas, but especially if you are traveling internationally. It would be wise to be up to date on these preventatives and to have them listed on the health certificate or in your pet's patient history to bring with you.

Download the [GVL MyVetLink app](#), where you have 24/7 access to your health certificates and other documents. To join MyVetLink as an animal owner or agent (trainer, stable owner, transporter, etc.), ask your GVL veterinarian to grant you access. Learn more at www.myvetlink.com.
