

Introducing the New SWS CENTRAL TRANSFER STATION

The Central Transfer Station is a

ONE-STOP-SHOP

for all your trash and recycling needs!

**80% OF ANCHORAGE TRASH
MOVES THROUGH CTS.**

So we expanded our recycling and reuse operations to add decades of life to our landfill.

Do reuse, repurpose, and recycling operations really make a difference?

YES!

Making a can from an old can uses

90% less ENERGY

and generates

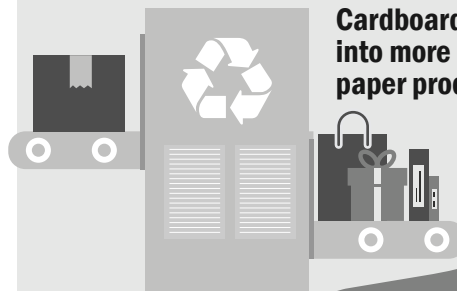

90% less EMISSIONS than a can produced from new material.

Don't toss your cardboard in the trash!

RECYCLE it instead

Cardboard can be remade into more packaging and paper products.

Cardboard can also be used to create compost in gardens - worms love them!

Nearly 50% of all aluminum cans produced are recycled.

Let's get to 100%!

Our landfill has less than ~40 years before it reaches full capacity.

More than half of our waste could be diverted to compost or recycling.

CTS made it simple to recycle, repurpose, and reuse items, so they don't get tossed in the trash.

REUSING is a great way to reduce the amount of trash filling our landfill.

BONUS: ONE PERSON'S TRASH

The new Central Transfer Station has more space to expand the reuse opportunities in Anchorage.

IS ANOTHER'S TREASURE!

Explore our NEW CTS FACILITIES and see where you can REUSE and RECYCLE in Anchorage!
