

Completions and Facilities Layouts

The completions and facilities layout spreadsheet gives you, the user, the ability to test multiple scenarios and layouts before equipment arrives on-site. This tool allows the user to select, move, and rotate completions, facilities, and rig equipment onto and within the designed pad.

Access Road Design

Access road designs are a pre-planning tool aimed at discovering construction costs, requirements, and dealing with any hurdles before they are encountered in the field.

Plan, profile, and cross section deliverables include:

- Slope stakes
- Free haul areas
- Over haul areas
- Cut / Fill depth
- Strip volume
- Cut / Fill volume
- Mass haul volume
- Surrounding dispositions
- Existing terrain details
- Contours
- Vertical curve details
- Horizontal curve details
