Communication

3D Model

V.M.A. is actually there so you can virtually be there too.

V.M.A. brings specialized 3D scanning hardware to the incident scene and while working in conjunction with the investigator, we scan the entire interior and exterior structure. That single scan will provide a multitude of deliverables including a 3D model, it is the 3D model that gives everyone involved the ability to immerse themselves in the scene without having to be there.

The 3D model is best described as *Google Street View*® but inside the incident scene, it provides 360 degrees of viewing but also has detailed tags to key assets for streamlined viewing in specific areas. Taking 100's of photos and flipping through them is time consuming and yesterday's innovation, V.M.A. brings today's innovation to you with an effective solution that is simple to use and vastly more efficient.

Benefits

- Client reassurance by improved experience
- Improved communication between all parties
- Asset identification and management
- Information tags for critical assets
- Reduced travel expenses
- Increased efficiency
- Demonstrate fire, smoke and water patterns
- Validate the origin area hypothesis
- 360 degree imagery of interior and exterior
- Unmanned Aerial System imaging
- Layered floor plans with imagery
- Eliminate exposure to off-gassing, carcinogens and physical dangers.
- View anytime and anywhere
- Much more...
