Welcome to my workshop

As of this year I am the mechanical lead and I mainly focus on the base/groundwork for the robot. With that comes assembling gear boxes, assembling the frame, fabricating parts, any shooters/index, any kind of climber we need, and all drivetrains. I oversee most all of the heavy equipment/tools.

Drivetrains

- Swerve
- West Coast Chain
- West Coast Belt

Motors

Gear boxes go on the motors to make them stronger or faster (versaplanetary)

- Falcon 500 (climbers and shooters)
- Red line (intake and index)
- Neo small (drive)
- Neo large (drive)

Hands on

Together we will make versaplanetary kits.
