

ENERGY MARKET TRANSITION ADVISORY

CAPABILITY STATEMENT

Australia is in the midst of a significant transition away from coal-fired Energy towards grid-scale generation, storage, and transmission, in order to meet the Federal Government's Renewable generation target of 82% by 2030 (currently sitting at 40%) and to achieve Net Zero by 2050.

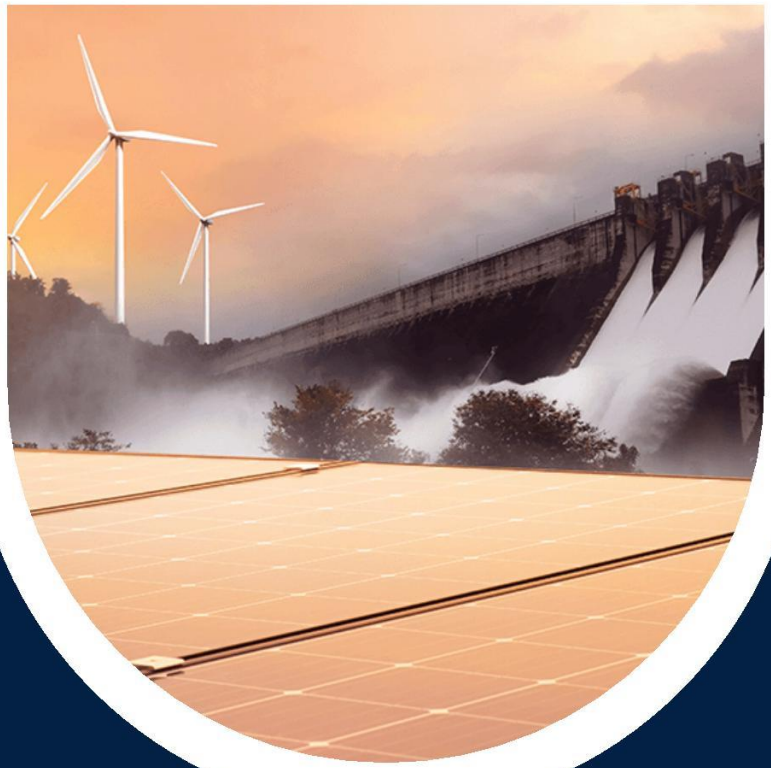

According to AEMO (the Australian Energy Market Operator) in their latest update to their Integrated System Plan (ISP) released in June 2024, the step change to achieve these targets will require an annualised capital investment of AUD\$122 billion through to 2050.

If your business is wanting to have a bigger impact in the planning, delivery, and integration of the huge volumes of new/upgrading of existing infrastructure required to reach these targets, the time to start planning and preparing is **NOW**.

We have proven experience in helping businesses commence/accelerate their Energy Market Transition journey.

SERVICES INCLUDE;

- ✓ Bid / Tender Strategies & Support
