Sustainable Energy at Scale

WHY

CHOOSE US?

Exceed Geo Energy are the industry leaders in Advance Geothermal Engineered Systems. Our Infinity-Loop™ is the next generation of surface and subsurface technologies for enhanced heat extraction through CO2 management and sequestration. The Infinity-Loop™ system incorporates proprietary digital engineering and remote supervision for full digital control.

Committed to establish a new generation of geothermal energy production under an ESG framework to enable global prosperity.

DEDICATED TO A POSITIVE CHANGE

ENERGY SECURITY

Increased Heat Extraction -
Evolve engineering practices to
unlock geothermal energy at
scale globally

CLIMATE SECURITY

Clean Energy - Negative to
Neutral Power generation with
reduced infrastructure needed.

COMMUNITY DEVELOPMENT

Smart and clean cities -
Evolving cities infrastructure to
avoid energy crisis and
capitalize on decarbonization

ABOUT US

WHO WE ARE

Our mission is to develop smart and clean societies by untapping the potential of geothermal energy at scale.

Clean Energy for Generations to Come...

- Earth loops can last for generations. The heat-exchange equipment typically lasts decades
- The earth loop could be buried vertically, meaning little above-ground surface is needed
- The systems run very quiet and there is no equipment outside to bother neighbors
- They work just as effectively in cooling and can be engineered to require no additional backup heat source.
- Geothermal systems remove four times more kilowatt-hours of consumption from the electrical grid per dollar spent.
