Update from our Sunshine Law case. Judge Paulk dismissed it. We never made it to having our case heard (showing videos, public records, testimony, depositions, etc.)

We were encouraged by Judge Paulk to appeal his decision. He said we had a strong case but still dismissed it.

It would cost a \$200 transcript, \$500 filing, \$7-10k briefing to appeal it.

In my opinion, there was a conflict of interest as Judge Paulk is a member of the Brevard County Civilian/Military Council, 45th Space Wing (Patrick AFB).

As many of you know, this meeting where they allowed one civilian in and not the rest was with experts to discuss contamination from Patrick AFB that affected their community.

Now the question is should we appeal?

Judge Paulk granted the city's motion to dismiss our sunshine law case without an explanation as to why. Here is some of what happened with the city of Satellite Beach, Florida, in 2018 when they blocked us from a meeting about water contamination and health issues. This meeting was posted on their website as a public meeting, canceled a few hours before the meeting, but the meeting still took place. The police greeted us at the door, and the mayor allowed one resident who has no affiliation with the city (stated on the record) into the meeting.

Police would not accept residents' statements regarding the violation, and State Attorney Phil Archer would not investigate. This case was filed in 2018 and has been ongoing.

Some city leaders seemed to have used advocates and victims to cover up their unethical behavior and act as if they cared about this contamination issue from the beginning. We have public records that show otherwise, sent to us from a wrongfully fired city clerk.

The city manager's assistant even printed an 11-page threat packet from city hall, which was sent to a resident's home. A resident who sacrificed a lot to help make a difference in the cancer cluster case. There has been no public apology or anything from the city for the unethical behavior that was displayed throughout our advocacy or hard work in finding answers about abnormally high cancer rates. 🙄 I will continue to stand up against corruption and environmental injustice.

Police block cancer survivors out of a public meeting related to water contamination

Maybe people should start paying attention to the judges they vote for.

1. The same judge that wouldn't hear our sunshine law case by phone during the pandemic was sued last year for dismissing a case using "Microsoft teams." -----> <https://unicourt.com/case/fl-bvd-r-j-cascella-vs-george-paulk-44927>

2. The same judge that's doing this to cancer patients in Titusville -----> <https://thespacecoastrocket.com/omni-faces-retaliation-from-parrish-negatively-impacting-cancer-patients/?mibextid=Zxz2cZ&fbclid=IwAR2T9SoPkCbMgkLkUNI5xXRMdDUOTRQ0wqdDmOhcKMMt5l1NFctynlOqvF6o>

3. This same judge who was reprimanded from the Florida bar on July 3, 2003. Case number SC02-2396

Does anyone ever research judges before voting for these people who make life-changing decisions on cases for people in our communities? Something to think about.

Oct 16, 2020

This is what we are trying to get justice on. It happened in September 2018. The city of Satellite Beach is trying to block discovery. People in Brevard County can't get justice when cases are dragged out, making it cost the victims, hoping people will give up. Do you think Judge Paulk, a member of the Civilian/Military Council, 45th Space Wing, will make the right decision? He has already tried to dismiss the case without any explanation as to why.

The DoD continued to escape responsibility for poisoning service members, their families, and surrounding communities. Col. Kevin Williams of Patrick Air Force Base tried to tell people that the DoD report released in 2018 was wrong. The military continued to dismiss, deny, and mock our "cancer group" with local city government officials who stated they didn't think PFAS was an issue.

The DoD avoided accountability and continued to deny the harmful health effects of PFAS even though they knew these chemicals were harmful to human health beginning in the 1970s. They chose to continue using the firefighting foam, exposing their military service members and families to "forever chemicals."

Additionally, families exposed to these chemicals in Brevard County who advocated for testing, science, and the affected communities were escorted out of a public meeting regarding the water contamination on-base in 2018. Patrick Air Force Base showed up to this meeting with attorneys, and the City of Satellite Beach decided to close the public meeting last minute, only allowing one resident whom they called their "water guru" with no expertise inside. They didn't take minutes on the meeting or let the media record it.

As a result, we filed a lawsuit to hold them accountable for violating sunshine law. We just filed an appeal after Judge Paulk, a Brevard County Civilian/Military Council member, 45th Space Wing (Patrick Air Force Base), dismissed the case without ever viewing evidence or hearing witness testimony of what happened that day.

Later, we received a harassment packet in the mail and learned that the City of Satellite Beach printed this packet at city hall, and their "water guru" created the packet.

Affected families not only carried the burden of proof but were ridiculed, attacked, and threatened. We continued to embrace science, partner with experts, and bring awareness to the harmful exposure of this pollution. Focused on water quality and environmental health, it hasn't been an easy

exposure of this pollution. Focused on water quality and environmental health, it hasn't been an easy journey.

This week the PFAS Action Act of 2021 was passed the house. This creates a national drinking water standard for select PFAS chemicals, designates PFAS as hazardous substances to allow the EPA to clean up contaminated sites, limits industrial discharges, and provides \$200 million annually to assist water utilities and wastewater treatment facilities. We are suffering the health consequences of our exposure to highly toxic PFAS chemicals, and it's time the DoD clean up their pollution.

Thank you to the numerous people who gave feedback and offered to help us with this site! We are so grateful to you. It will continue to be revamped and updated. There are a select few people needing clarification. To simplify, the city was DENIED attorney fees and costs on March 8, 2022, by Judge Lambert. That means they were trying to make us pay for their legal fees after violating our rights and closing residents out of this 2018 meeting about water contamination and cancer.

Our case was never heard. The judge chose to "dismiss" it. This does not mean the city, or we won. It simply means the case wouldn't be heard, and we were never allowed to present our evidence.

This is not a case between myself and the city, as over a dozen residents were present during this violation. However, they are returning to the lower court to Judge Pualk to ask for those fees again. This lawsuit was filed by Satellite Beach Citizens under "Florida Health Connection."

To stay up to date www.sunshinecase.org

Complaints Against City of Satellite Beach Council Members

Three elected government officials in the City of Satellite Beach were involved in a closed-door meeting regarding water contamination at Patrick Space Force Base and cancer concerns in June 2018. The meeting was posted to the city's website as public but abruptly canceled before the meeting took place. Although the meeting was canceled on their website, county officials, state representatives, military base attorneys and agents, elected officials, and cherry-picked residents still met.

Some residents were unaware of the cancellation and still attended the meeting. Upon arriving at the meeting, they were greeted by police officers and told that it was a "private meeting" and that they could not enter. The incident was captured on video, and three Satellite Beach elected officials were photographed in the city hall behind closed doors. Officials also cherry-picked which residents they allowed inside the meeting and did not take meeting minutes or let anyone video record.

The elected officials were never investigated or suspended from office, even though numerous residents filed reports and contacted the police, state attorney, and Florida attorney general.

Frankie Spears Esposito Weekley People need to do in-depth homework on candidates, and unfortunately, they don't. For instance, a candidate named Sandra running for commissioner claims to be "for the people" while sending hundreds of psychotic long emails rants harassing people and trying to ruin the reputations and business relationships of long-time residents in our communities. She sent 156 lunatic rants to my academic partners in one month and then told the public she was working with them. She has used our hard work as hers for campaigning, and I question anyone's intelligence that supports her.

Often these council members don't take the opportunity to collaborate. Titusville members don't seem to do their research or question things enough; they rely heavily on the water resource director and city manager to feed them the info. We need leaders who will spend quality time researching the issues, so they aren't ignorant of the subject and entirely reliant on others to make their decisions.

We have the nation's 3rd highest levels of PFAS chemicals and water quality issues. Titusville hasn't had an independent audit on the water department or the federal money allotted to fix infrastructure. I'd like to see candidates plugged into these issues by gaining knowledge and bringing forward solutions.

Speaking of council meetings:
