## Input type button onclick submit form

Which function, submit or onClick will run first? Or will they run simultaneously? In my program onClick function runs first and then onSubmit. But why and is it always like that? [memoir\\_44\\_campaign\\_book\\_2.pdf](#)

```
6 I'm trying to setup a 'Click to Chat' system for my company. It requires a form which captures some information from the user. When you submit the form, it's supposed to open a new window using the script in the .js file. I tried to add some validation, which resulted in both an onclick, and an onSubmit function. When the form is subitted without the validation in place, it opens a new window using the BG.startChatWithIssueForm(this.form, true); function. But, For some reason, when I include the onSubmit for validation, the onclick ignores it completely. I've tried nesting the BG.startChatWithIssueForm(this.form, true); function in different spots in the formValidator() function, but it still results in a file download prompt instead of opening a new window. Not sure what I'm doing wrong. praying\_a\_rosary\_guide I've been researching this for weeks, and can't seem to come up with anything. Javascript is definitely not my forte, so any assistance would be greatly appreciated. See the code below: JS: function Bomgar() { var _host = ""; var protoRe = /^(\http|https):\/\/$/; /* private */ function createURL(params, forPopup) { var qStr = ""; for (var k in params) { qStr += "&"+encodeURIComponent(k)+"="+encodeURIComponent(params[k]); } qStr = "popup="+ (forPopup ? "1" : "0") + "&c2cjs=1" + qStr; return _host+"api/start_session.ns?" +qStr; }; function openWindow(params) { return window.open( createURL(params, true), 'clickToChat', 'toolbar=no,directories=no,status=no,menubar=no,resizable=yes,location=no,scrollbars=no'); }; function redirectWindow(params) { window.location.href = createURL(params, false); }; function startChat(params, doFull) { var w = openWindow(params); if (w && !w.closed) { return; } else if (doFull) { _redirectWindow(params); return; } }; function startChatWithSurveyValues(surveyValues, fallbackToFullWindow) { surveyValues.issue_menu = '1'; startChat(surveyValues, fallbackToFullWindow); }; /* public */ // Set the public site hostname that click to chat should be started on. this.setSite = function(siteHostname) { if (! protoRe.test(siteHostname)) { siteHostname = "http://" +siteHostname; } if (siteHostname[siteHostname.length-1] != '/') { siteHostname += '/'; } } _host = siteHostname; }; // Start a click to chat session using a session key, optionally falling back to a full browser window redirect if the popup window fails to open due to popup blockers, this.startChatWithSessionKey = function(sessionKey, fallbackToFullWindow) { var p = {short_key: sessionKey}; startChat(p, fallbackToFullWindow); }; // Start a click to chat session using a session key and external key, optionally falling back to a full browser window redirect if the popup window fails to open due to popup blockers, this.startChatWithSessionKeyAndExternalKey = function(sessionKey, externalKey, fallbackToFullWindow) { var p = {short_key: sessionKey, external_key: externalKey}; startChat(p, fallbackToFullWindow); }; // Start a click to chat session using just an issue id and no other front end survey fields. this.startChatWithIssueId = function(issueId, fallbackToFullWindow) { _startChatWithSurveyValues({id: issueId}, fallbackToFullWindow); }; // Start a click to chat session by passing the entire front end survey form element.
```

```
// This will submit all non-button input element values on the form. // Any unexpected survey field names will be ignored. this.startChatWithIssueForm = function(formElement, fallbackToFullWindow) { var params = {}; for (var i = 0; i < formElement.elements.length; i++) { var e = formElement.elements[i]; if (e.name && e.value && e.type && e.type != 'button' && e.type != 'submit') { params[e.name] = e.value; } } formElement = undefined; params.issue_menu = '1'; _startChat(params, fallbackToFullWindow); return false; }; // Start a session with a representative id and name. this.startChatWithRepIdName = function(repId, repName, fallbackToFullWindow) { var p = {id: repId, name: repName}; _startChat(p, fallbackToFullWindow); }; return this; } var BG = Bomgar(); HTML Code:
```

What issue are you having?

Your First and Last Name:

Your User ID (ABC1234):

Describe Your Issue:

The Button (this submit button is not working, and if i delete the onClick, the submit works. how can i make both, the onClick and the Submit to work.)  The whole Form
