CRediT (Contributor Roles Taxonomy) offers authors the opportunity to share an accurate and detailed description of their diverse contributions to the published work. The corresponding author is responsible for ensuring that the descriptions are accurate and agreed by all authors. The role(s) and degree of contribution of all authors should be listed, using the relevant categories defined by . Authors may have contributed in multiple roles. CRediT in no way changes the journal's criteria to qualify for authorship. How Submitting authors may be asked or required to select one or more CRediT roles for each author, including the submitting author. During submission, proceed to the Manuscript Data step . Select the 'Author' heading to open the list of authors . Then select the 'Edit' ( ) button for an author, or else select the 'Add an Author' button to open a popup to enter the information. Scroll down to the heading Contributor Roles and select "Click here to select roles" to reveal the CRediT list. Tick all the roles that apply to the author as in this example . The journal may require you to select the degree of contribution for each selected role, as in this screenshot . After completing all the other author information, select the 'Save' () button at the top or bottom. When completed The contribution details are recorded for each author. Journals may publish the information in the article as a CRediT statement, as seen in the example at the bottom of this page. Was this answer helpful? For further assistance: Opens new window Download file Opens an image Submission to Next journals proceed totally online and you will be guided stepwise through the creation and uploading of your files. The system automatically converts your files to a single PDF file, which is used in the peer-review process.As part of the Your Paper Your Way service, you may choose to submit your manuscript as a single file to be used in the refereeing process. This can be a PDF file or a Word document, in any format or lay-out that can be used by referees to evaluate your manuscript. It should contain high enough quality figures for refereeing. If you prefer to do so, you may still provide all or some of the source files at the initial submission. Please note that individual figure files larger than 10 MB must be uploaded separately.ReferencesThere are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journal will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct.Formatting requirementsThere are no strict formatting requirements but all manuscripts must contain the essential elements needed to convey your manuscript, for example Abstract, Keywords, Introduction, Materials and Methods, Results, Conclusions, Artwork and Tables with Captions.If your article includes any Videos and/or other Supplementary material, this should be included in your initial submission for peer review purposes.Divide the article into clearly defined sections.Peer reviewThese journals operate a single anonymized review process. All contributions will be initially assessed by the editor for suitability for the journal. Papers deemed suitable are then typically sent to a minimum of two independent expert reviewers to assess the scientific quality of the paper. The Editor is responsible for the final decision regarding acceptance or rejection of articles. The Editor's decision is final. Editors are not involved in decisions about papers which they have written themselves or have been written by family members or colleagues or which relate to products or services in which the editor has an interest. Any such submission is subject to all of the journal's usual procedures, with peer review handled independently of the relevant editor and their research groups. More information on types of peer review.Revised SubmissionsUse of word processing softwareIt is important that the file be saved in the native format of the word processor used. The text should be in single-column format. Keep the layout of the text as simple as possible. Most formatting codes will be removed and replaced on processing the article. In particular, do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc.
When preparing tables, if you are using a table grid, use only one grid for each individual table and not a grid for each row. If no grid is used, use tabs, not spaces, to align columns. The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also the Guide to Publishing with Elsevier).

Note that source files of figures, tables and text graphics will be required whether or not you embed your figures in the text. See also the section on Electronic artwork. To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.LaTeXIf you wish to use LaTeX, it is recommended that Authors use the Elsevier article class elsarticle.cls to prepare your manuscript and BibTeX to generate your bibliography.Our LaTeX site has detailed submission instructions, templates and other information.Article StructureAuthors are welcome to structure articles in the manner they need to best convey their research. The information below provides an example for how we article can be structured.IntroductionState the objectives of the work and provide an adequate literature survey or a summary of the results.ExperimentalProvide sufficient details to allow the work to be reproduced by an independent researcher. kärcher fc5 repair manual Methods that are already published should be summarized, and indicated by a reference. ximexinidamitur.pdf If quoting directly from a previously published method, use quotation marks and also cite the source.

Any modifications to existing methods should also be described.Theory/calculationA Theory section should extend, not repeat, the background to the article already dealt with in the Introduction and lay the foundation for further work. In contrast, a Calculation section represents a practical development from a theoretical basis.ResultsResults should be clear and concise.DiscussionThis should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate.

Avoid extensive citations and discussion of published literature.ConclusionsThe main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.AbstractA concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone.

Avoid extensive citations and discussion of published literature.ConclusionsThe main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.AbstractA concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.Graphical abstractAlthough a graphical abstract is optional, its use is encouraged as it draws more attention to the online article. The graphical abstract should summarize the contents of the article in a concise, pictorial form designed to capture the attention of a wide readership. Graphical abstracts should be submitted as a separate file in the online submission system. Image size: Please provide an image with a minimum of 531 × 1328 pixels (h × w) or proportionally more. The image should be readable at a size of 5 × 13 cm using a regular screen resolution of 96 dpi. Preferred file types: TIFF, EPS, PDF or MS Office files. axis football league unblocked games 77 You can view Example Graphical Abstracts on our information site.KeywordsImmediately after the abstract, provide a maximum of 6 keywords, using American spelling and avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of'). Be sparing with abbreviations: only abbreviations firmly established in the field may be eligible. These keywords will be used for indexing purposes.AcknowledgementsCollate acknowledgements in a separate section at the end of the article before the references and do not, therefore, include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).Formatting of funding sourcesList funding sources in this standard way to facilitate compliance to funder's requirements:Funding: This work was supported by the National Institutes of Health [grant numbers xxxx, yyyy]; the Bill & Melinda Gates Foundation, Seattle, WA [grant number zzzz]; and the United States Institutes of Peace [grant number aaaa].It is not necessary to include detailed descriptions on the program or type of grants and awards. When funding is from a block grant or other resources available to a university, college, or other research institution, submit the name of the institute or organization that provided the funding.If no funding has been provided for the research, it is recommended to include the following sentence:This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.Math formulaePlease submit math equations as editable text and not as images. Present simple formulae in line with normal text where possible and use the solidus (/) instead of a horizontal line for small fractional terms, e.g., X/Y. In principle, variables are to be presented in italics. Powers of e are often more conveniently denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).ArtworkElectronic artworkGeneral pointsMake sure you use uniform lettering and sizing of your original artwork.Preferred fonts: Arial (or Helvetica), Times New Roman (or Times), Symbol, Courier.Number the illustrations according to their sequence in the text.Use a logical naming convention for your artwork files.Indicate per figure if it is a single, 1.5 or 2-column fitting image.For Word submissions only, you may still provide figures and their captions, and tables within a single file at the revision stage.Please note that individual figure files larger than 10 MB must be provided in separate source files. A detailed guide on electronic artwork is available.You are urged to visit this site; some excerpts from the detailed information are given here.FormatsRegardless of the application used, when your electronic artwork is finalized, please 'save as' or convert the images to one of the following formats (note the resolution requirements for line drawings, halftones, and line/halftone combinations given below): EPS (or PDF): Vector drawings. Embed the font or save the text as 'graphics'.TIFF (or JPG): Color or grayscale photographs (halftones): always use a minimum of 300 dpi.TIFF (or JPG): Bitmapped line drawings: use a minimum of 1000 dpi.TIFF (or JPG): Combinations bitmapped line/half-tone (color or grayscale): a minimum of 500 dpi is required.Please do not:Supply files that are optimized for screen use (e.g., GIF, BMP, PICT, WPG); the resolution is too low.Supply files that are too low in resolution.Submit graphics that are disproportionately large for the content.Figure captionsEnsure that each illustration has a caption. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used.TablesPlease submit tables as editable text and not as images.

Subgroup-specific alternative splicing in medulloblastoma.

Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article. Please avoid using vertical rules and shading in table cells.ReferencesReference formattingThere are no strict requirements on reference formatting at submission. References can be in any style or format as long as the style is consistent. Where applicable, author(s) name(s), journal title/book title, chapter title/article title, year of publication, volume number/book chapter and the article number or pagination must be present. Use of DOI is highly encouraged. The reference style used by the journals will be applied to the accepted article by Elsevier at the proof stage. Note that missing data will be highlighted at proof stage for the author to correct. If you do wish to format the references yourself they should be arranged according to the following examples:Supplementary materialSupplementary material such as applications, images and sound clips, can be published with your article to enhance it. Submitted supplementary items are published exactly as they are received (Excel or PowerPoint files will appear as such online). Please submit your material together with the article and supply a concise, descriptive caption for each supplementary file. If you wish to make changes to supplementary material during any stage of the process, please make sure to provide an updated file. Do not annotate any corrections on a previous version. Please switch off the 'Track Changes' option in Microsoft Office files as these will appear in the published version.Research dataNext journals encourage and enable you to share data that supports your research publication where appropriate, and enable you to interlink the data with your published articles. Research data refers to the results of observations or experimentation that validate research findings. To facilitate reproducibility and data reuse, these journals also encourages you to share your software, code, models, algorithms, protocols, methods and other useful materials related to the project.Below are a number of ways in which you can associate data with your article or make a statement about the availability of your data when submitting your manuscript. If you are sharing data in one of these ways, you are encouraged to cite the data in your manuscript and reference list.

Please refer to the "References" section for more information about data citation. eldritch heritage pathfinder guide

For more information on depositing, sharing and using research data and other relevant research materials, visit the research data page.Data linkingIf you have made your research data available in a data repository, you can link your article directly to the dataset.

Elsevier collaborates with a number of repositories to link articles on ScienceDirect with relevant repositories, giving readers access to underlying data that gives them a better understanding of the research described.There are different ways to link your datasets to your article. When available, you can directly link your dataset to your article by providing the relevant information in the submission system. For more information, visit the database linking page.For supported data repositories a repository banner will automatically appear next to your published article on ScienceDirect.In addition, you can link to relevant data or entities through identifiers within the text of your manuscript, using the following format: Database: xxxx (e.g., TAIR: AT1G01020; CCDC: 734053; PDB: 1XFN). spinning top candlestick trading strategy CRediT gives authors the chance to accurately and completely describe the various contributions they made to the published work. The descriptions must be accurate and approved by all authors, according to the corresponding author. mcdougal_littell_geometry_practice_workbook.pdf Every person listed as an author should have contributed significantly, directly, and intellectually to the work. For instance, they ought to have helped with the ideation, design, analysis, and/or interpretation of the data (in the case of a research report). Guest or honorary authors are not permitted.Everybody who satisfies the requirements for authorship is listed as an author, and each author attests that they contributed enough to the project to be held accountable for its content, including conception, design, analysis, writing, and manuscript revision.The credit of a second and third author is essentially the same, even though authorship credit should only be given for significant contributions. Based on the author's contribution to the work, the authorship order is determined.The term author denotes ownership of a published or performed work and the expectation of credit. Accordingly, anyone who has contributed significantly intellectually to the work may be given authorship credit, regardless of whether they actually wrote it or not.The first author is regarded as having made a greater contribution than the second, and so on, until you get to the author who is in last place. However, it's not impossible for there to be a joint first author (co-first author) or joint corresponding author (co-corresponding author). How do you properly credit an author in a paper? You can give credit in two different places: in the paper itself, in footnotes or parentheticals, and in the bibliography at the conclusion of the paper. To give the author/creator credit for the work and to enable readers to retrieve the information for review, all materials that you have quoted (left in the author's original language) or paraphrased (put into your own words) must be cited.The author's last name and a page number in parentheses are included in in-text citations. Here is a direct quote from Smith (8). Use the first word or words of the title in the absence of the author's name. Use quotation marks and similar formatting as in the works cited list.Always use et al. MLA format. Both the Works Cited list and MLA in-text citations must follow these guidelines.In-text citations consist of the author's last name followed by a page number in parentheses. Here is a direct quote from Smith (8). Use the first word or words of the title if the author's name is not specified. Maintain the same style, including the use of quotation marks, as the works cited list. What exactly is CRediT for authorship?

Authorship implies that one will be given credit and is in charge of a piece of writing that is presented or published. As a result, anyone who has contributed significantly intellectually to the work may be given authorship credit in addition to the actual writers. 68880808599.pdf

The person who made the biggest contributions to the work, including writing the manuscript, should be listed as the first author. According to the relative overall contributions to the manuscript, the order of the authors should be decided. It is customary to place the senior author at the end of the list, sometimes regardless of how much of a contribution they made.This is a typical author misunderstanding, especially at the start of a researcher's career, but it is simple to clarify: fundamentally, the first author is the one who actually conducted the research and wrote the manuscript, while the corresponding author takes the lead in the manuscript submission for publication process.In many academic fields, the first or prime authorship of a paper denotes that person has contributed the most work or intellectually to the study.

Given that the first author will receive the majority of the credit for the work, it is a very prestigious position.The first author usually puts in the most effort and gets the most credit, whereas the roles of later authors are less clear. Due to the presumption that the final author was the one who actually carried out the research, in many research fields, they are given equal credit to the first author. How do you acknowledge four authors? A Work by Three or More Authors Only list the first author's name, followed by et al. When et al. 79937494215.pdf There shouldn't be a period after et. Only al should have a period after it. The chosen author among a list of equally contributing authors is likely to receive a greater share of citation credit and recognition from readers by virtue of having their name first since only 1 author can be listed first on a publication.The author who conducted the research, wrote and edited the paper is typically the one listed first on a published article, especially in academic publishing. Additionally, it is very likely that he or she will be the point of contact for the editors of the targeted journal following their review.The person who made the most contributions to the work, including the writing of the manuscript, should be listed as the first author. The relative overall contributions to the manuscript should be used to decide which authors come first. Usually, regardless of how much of a contribution he or she made, the senior author is listed last.This is a typical misunderstanding, especially at the start of a researcher's career, but it is simple to clarify: fundamentally, the first author is the one who actually conducted the research and wrote the manuscript, while the corresponding author takes the lead in the manuscript submission for publication process.No matter how many other authors there are, all future citations of the work will include the (last) name of the first author. partes internas del cpu y sus funciones Co-first authors are another possibility.

This frequently occurs when working on projects that call for various specialties. The work of an author is protected by copyright laws from being copied without that author's consent.

Always give due credit to the source in order to follow the law.

You could fail your course or face legal action from the author if you are caught plagiarizing. By listing your sources or citing them, you are giving credit to the author of the original content. A direct quote should always be cited with the author's name and citation when used. Footnotes or parenthetical comments can be used to acknowledge sources within a research paper.Citing your sources is a crucial component of being an exceptional, responsible, and trustworthy student. Crediting the sources you use not only strengthens your credibility and serves as evidence of the research you conducted, but it also aids in preventing plagiarism.When you are verbatim quoting an author, you must always put quotation marks around their words to prevent plagiarism. Additionally, you ought to employ expressions like stated, mentioned that, in the words of, etc. You must also cite the source. Without knowing the author, how can you give credit? The title of the source you are citing should come first in the citation if neither an author nor a creator are mentioned. The author's name should not be cited as Anonymous. Use quotation marks or italics to emphasize the first one, two, or three key words from the title (just like you would in your Works Cited list). Put the last name of the first cited author and the publication's page number at the end of your sentences when citing sources in text.

The page number should be placed in parentheses after the author's name.Start the citation with the title of the source you are citing instead if an author or creator is not identified. Don't use the name Anonymous as the author. Use quotation marks or italics to emphasize the first one, two, or three key words from the title (just like you would in your Works Cited list). What does a CRediT author statement for one author look like? The author confirms sole responsibility for the following: study conception and design, data collection, analysis and result interpretation, and manuscript preparation. Authorship implies that one will be given credit and is in charge of a work that is presented or published. As a result, anyone who has contributed significantly intellectually to the work may be given credit in addition to the actual writers of a published work.

Authorship, then, includes not only those who actually write but also those who have contributed significantly to a study's body of knowledge.All individuals who meet the requirements for authorship are listed as authors, and all authors certify that they have contributed sufficiently to the work to assume public responsibility for its content, including involvement in the concept, design, analysis, writing, or revision of the manuscript.Co-first authors are also possible.

This frequently happens when working on projects that call for various specialties. It is also employed when it is difficult to determine who contributed more. It is possible to list two, maybe even three authors as equal contributors. jpg_to_app_for_pc.pdf
