And, two things, my email address is in my signature (if you're browsing on your mobile, ignore point 1) and two, is your PM broken? Hi! I sent you a private message.... I see you responded.... God Bless you dude!!! Thanks g00r, this is super awesome ! Hi g00r! Thanks so much for posting this. A quick question if I may.....can I just check the calculation at C14? It appears to be calculating GST on C7 to C13....but as C13 is a sum of C7 to C12, it appears to be incorrectly doubling the GST payable figure. Is that correct? Or is the GST calculation actually meant to be on C7 to C12 (or C13 alone)? Many thanks! You're right creenno , there is an error there. C14 should be =(SUM(C7:C9))/11 I have uploaded a corrected version, so that link will now have the new formula You're right creenno , there is an error there. C14 should be =(SUM(C7:C9))/11 I have uploaded a corrected version, so that link will now have the new formula Terrific, thanks so much mate! Really appreciate it Had a look at it. Kilometres appears to have been spelt incorrectly. [how to disassemble nordictrack elite 3700](#) It would be handy if the labels on the LHS staid put, along with those on the top and the graph.

I split the screen and dragged the bars to do this. Doesn't look quite so elegant, but if I'm filling in figures way down on the lower right side, I know where I'm at, without having to scroll around. Okay..

an instance of bad spelling and you don't like the design. . But thr important stuff, like formulas work right? Okay.. [turner watch company](#) an instance of bad spelling and you don't like the design. .

But thr important stuff, like formulas work right? Well, I dunno. I'm not filled with confidence right now. You can set things up however you like. For me, usability counts, and if I'm entering my weekly figures, I want to make sure I'm putting them in the correct cell. [7467877413.pdf](#) It doesn't matter how good the formulas are if the data is bad. I find two things interesting: - The file has been downloaded 653 times (wow) - Your confidence is undermined because I used the American spelling of kms I find two things interesting: - The file has been downloaded 653 times (wow) - Your confidence is undermined because I used the American spelling of kms If there are errors in the material, they should be corrected rather than defended. And if there are obvious errors, then how can I have confidence that there are not others more subtle? Surely you are not suggesting the spreadsheet is perfect and holds no room for improvement?

Especially if users make suggestions for improvement? I suggest that ignoring or belittling user feedback is not a good business model. Reactions: 2 Thanks for putting the effort into creating the spreadsheet and sharing it; I see there is a Toll column in the credits side, but not on the debits; is there a reason for that, or am I missing something?

Advice please. 1. I have purchases of Safety Camera (\$200),GPS Unit (\$356), Photo IDs, RMS Driving record, etc Do I just add lines to the spreadsheet in the week I purchased them? 2. I just had new rego - so incurred rego check, actual Rego, CTP, Insurance Do I add lines and divide by 52 weeks? 3. Phone is monthly \$110 total. [8089570952.pdf](#) I cant easily calculate my usage as I check my Uber apps daily but only work casually, when I feel like it. Do I just divide by 4 to get weekly? 4. Uber pays weekly which is great for you spreadsheet.

Uber also issues quarterly statements which don't line up with the above. How is this handled? Thanks in advance Just from a general accounting point of view it would be advantageous for you to run on a cash basis rather than an accrual basis. That is, recognise the revenue and expense on the day you receive / pay it. the accrual basis is where you would recognise the insurance as a prepayment and then expense over twelve months. You probably don't need to add that complexity to your Uber business. Reactions: 1 plea Greetings all, For all of you out there baffled about how to calculate your Uber income, I have put together this excel spreadsheet which you may find useful. This is provided free, without warranty, guarantee or assurances of accuracy. All formulas are unlocked and unprotected so if anyone finds any errors in them, feel free to let me know and I'll put up a new version. To use, just enter in all your figures from top to bottom. The sheet will calculate your business usage or your car and claim receipts accordingly. The sheet will produce your income at the bottom, this amount does not take in to account income tax Tax calculaor Ver 1.xlsx please upload new link because this one give error in formula it will help alot You're right creenno , there is an error there. C14 should be =(SUM(C7:C9))/11 I have uploaded a corrected version, so that link will now have the new formula Thanks for putting the effort into creating the spreadsheet and sharing it; I see there is a Toll column in the credits side, but not on the debits; is there a reason for that, or am I missing something?
