About the workshop

JASP (Jeffreys' Amazing Statistics Program) is a free, user friendly open source program used for conducting a wide range of statistical analyses that offers a range of features including data manipulation, descriptive statistics, data visualization and hypothesis testing. It has a simple drag and drop interface, easy access menus, real-time computation, and a display of all results. Advanced analyses such as factor analysis, structural equation modelling and meta analysis are also possible. It is designed to be easy to use and familiar to users of SPSS.

Objectives of the Workshop

- To introduce participants to JASP
- To train participants on handling data and variables
- To train participants in descriptive and inferential statistical analysis
- To impart hands on experience in statistical tools

Prerequisites
