

How is

Eco-Friendly?

Our flat-pack packaging and non-degradable components allow for the highest storage efficiency, both outside and in a warehouse.

Panels are pre-cut and delivered to the site, allowing for minimal waste.

We plan for the least number of transport units (trucks, containers, etc.) and logistics movements, reducing the environmental impact from shipping through to construction of the new units.

Made with recycled materials that are 100% recyclable allowing our system to qualify for credits based upon the LEED 2009 for New Construction and Major Renovations rating system.
