

## Featured Model

# Out of the Box Building Systems

All of the Benefits. None of the Headaches.

Out of the Box's rapid-ready homes provide affordable, energy efficient, construction worldwide, offering significant architectural flexibility with simplicity of design. Our homes combine well-established construction methods with new technology, providing superior safety for occupants. These environmentally-friendly models not only reduce footprint, but are more energy efficient than traditional construction. Key features include:

- SIPS are stronger than stud-framed assemblies and offer a tighter building envelope.
- Homes are non-combustible and will not absorb water or rot, support mold or mildew, and are termite proof.
- Testing has shown industry-leading wind and seismic performance.
- Complete customization of plans and elevations allow our homes and buildings to work in any locale.
- Lower cost can support affordable housing and non-profit projects as well as provide investors higher returns than conventional building.

The proven construction methodology and usage in both commercial and residential applications make our buildings flexible for a variety of needs and cost competitive for affordable housing situations as well.
