

# E-NOSE

## ENVIRONMENTAL

Environmental managers are increasingly being required to control industrial smell and other invisible airborne chemicals. Good measurement is the essential ingredient for effective management.

E-Nose provides an industry-specific management solution for the continuous and real-time monitoring of environmental odour and air quality resulting in higher profits and better community relations.

Now emissions can be identified and measured both indoors and outdoors with E-Nose equipment and services. With maximum response time, complaints can be eliminated, equipment can be run cost effectively, and pressure from EPAs and community representatives will be a thing of the past.

### How it works

#### MONITOR

- Continuous monitor of airborne chemicals
- Several kms effective range
- Robust, weather proof casing

#### REPORT

- Data transmitted instantly to manager's computer
- Permanent record of events retained

#### ALARM

- Predefine conditions requiring attention
- Automatic alarm system instantly alerts multiple receivers by sms
