PLASTIC RECYCLING TECHNOLOGIES

Post Industrial Recycling (PIR)

Residual products left behind by the industrial production of plastic products are a high-quality and valuable raw material.

PET Improvement (PET)

P:REACT is the next dimension of PET recycling. It only takes a few minutes to take PET from industrial waste or post-consumer PET and turn it into food-safe rPET.

Our intelligent recycling technology provides the most sustainable solution for every requirement. For a wide variety of raw materials such as industrial waste, post-consumer waste or PET materials, NGR has the ideal recycling solution to meet your needs.

Post Consumer Recycling (PCR)

Nearly half of the plastic produced in the world gets thrown away after just one use. This waste could serve as a valuable resource if only we took advantage of it.
