

xOps helps organizations run their technology more effectively and more efficiently.

#### CONSULTING SERVICES

- DevOps leadership
- DevOps engineers
- Management consulting
- Operations process improvement (ITIL)
- ServiceNow administration

#### OPEN SOURCE TOOLS

- xView
- xSUM
- Logx

#### OUTSOURCE SERVICES

- Tier 1 and Tier 2 managed services
- Automation development
- ServiceNow administration

## xOps Open Source Tools for DevOps Engineers and SREs

### Open Source Toolset for DevOps

xOps is dedicated to helping companies run their technical operations more efficiently and effectively. We lead and facilitate collaboration on critical open source tools that support the core DevOps cultural transformation.

In the modern enterprise we often have siloed data. Our tools help bring that data together and transform it into valuable information. DevOps engineers using the right tools can make sure that data is shared not just with the ops team, but the dev team and the business team. By increasing transparency we help build collaborative teams and reduces the time needed to resolve critical issues.

#### xView

xView brings together all enterprise data to provide a single source of information about the health of and organizations products and services.

#### Logx

Logx extends upon the awesome power of the Elastic stack (Elasticsearch, Logstash, and Kibana) to provide a managed solution for logs.

#### xSUM

xSUM is the first open source synthetic monitoring tool. Allowing users to ensure their sites and services are available 24 x 7 x 365 from anywhere around the world.

#### xStack

xStack builds upon Zabbix infrastructure monitoring to provide insights into systems that are truly enterprise scale.

### Benefits of xOps Open Source Tools

xOps' tools identify issues before they impact the customers helping identify issues before they impact your customers and reducing the duration of incidents when they do occur. They enable engineers on the front line to improve processes and drive business value, moving beyond break-fix technicians.

- All operational metrics, logs, alerts and business data in one place, in real time
- Tools to identify issues before they impact the customers
- Self-healing systems through automated issue resolution
- Elastic systems with automated capacity adjustment
- Visibility across business metrics with predictive analytics to determine trends before the competition

## XOPS OFFERS UNIQUE VALUE

- DevOps and cloud thought leadership
- Open source tools backed by a strong open source community
- Global footprint to bring cost effective solutions to market at high velocity

## Move Quickly to the Next Level

XOps tools allow DevOps to think about automation, and how to automate specific data-streams and server configurations, and how to automate resolution of the tickets that come up without manual intervention.

Advances in machine-learning are key because, in combination with a low cost, single pane of glass tool like xView, you can get true predictive intelligence and self-healing systems. It can become a very effective learning system quickly helping to identify issues before they impact your customers.

With xOps open source tools you can implant the process of collaboration and DevOps in the tools you build.

## Big Data and Machine Learning

With automation and machine learning, engineers are empowered to solve root-cause problems, not just respond to alerts. With this approach the cost of doing monitoring keeps dropping as the volume goes up.

- Address the problems and opportunities presented by massive data growth cost effectively
- Manage the effects of monitoring tool proliferation
- Provide a cost aware solution for the mid-sized agile enterprise

xOps helps client organizations use the latest tools and embed a collaborative process for how they are used.

## Help your Engineers to Collaborate with xView

Our open source presentation and correlation tool, xView, supports the core DevOps cultural shift, with a cultural bias towards working collaboratively. In the modern enterprise we often have very siloed data and information. xView helps to bring that data together. Engineers can see data in a cohesive way that's shared with not just the ops team, but the development and business teams as well. Business owners can get a real-time report that helps them grow the business and helps the dev and ops teams build the business.

- Manage all your alerts from one location
- Quickly diagnose problems
- Create faster resolutions and happier customers
- Correlate alerts to get the whole picture of unfolding incidents from any data source
- Help your engineers stop incidents from happening again
- Accelerate automation
