

## Compression Load Cells.

Euroload supply a full range of compression load cells to suit most applications. Anywhere there is a compressive force to be monitored. From single load cells to multicell systems reading individual load and totals.

There are various styles of compression load cells to suit your exact application from standard cylinder style compression load cells, low profile, tensile/compression low profile high accuracy, Fixed cells for tank weighing.

We can supply compression load cells for tank weighing, mixing tanks, weigh platforms, structure weight verification, test bed load monitoring, torque load monitoring on active arm.

Our new telemetry compression load cell kits come as 4 and 8 cells as standard, the supplied software can work out the center of gravity of structures prior to sling manufacture.
