

ELT-X24 Hazardous Area Telemetry Load Shackle

Euroload Limited have introduced a new range of telemetry load shackles developed for Hazardous area zone 1 and 2. ATEX/IEC approved. This range covers 6.5 tonnes to 2000 tonnes.

The handset and Transmitter are powered using 2 x AA lithium L91 batteries. The Transmitter has been designed to be removable from the shackle to enable battery change in the safe area without removing the shackle from its position.

Data logging can be achieved within the safe area using standard ELT-24-BSUe USB receiver.

Our standard shackle of choice is the Van Beest range but other manufacturers can be used on request.

Intrinsically safe electronics, Up to 800 meters transmit range, High accuracy, Power efficient (up to 5 years battery life, cross compatibility (operates with X24 and T24 receivers, IP67 ingress protection, audible warnings, backlight display, can read multiple transmitters in one area. See datasheet ELTX24-HD for full handset details and EX markings. See datasheet ELTX24-ACMI-SA for full transmit details and EX markings.
