

## ADVANTAGES

- Static weighing
- Excellent value for money
- Load data printing
- Autonomous installation
- Reusable system

On-board weighing for fork-lift trucks has become more and more essential over the years; it is useful during the loading process such as packing-list on storage and stock control. It provides economic weight calculations of the materials, optimization of the means of transport stowage, the storage of materials or to define pallets stack. Our weighing system provides to carry out the update static weighing in real-time with the system unit set in the cab.

## FUNCTIONS

- Partial weight
- Loads totalizer
- Weighing time setting
- Diagnostics

Paper roll printer >

## TECHNICAL DATA

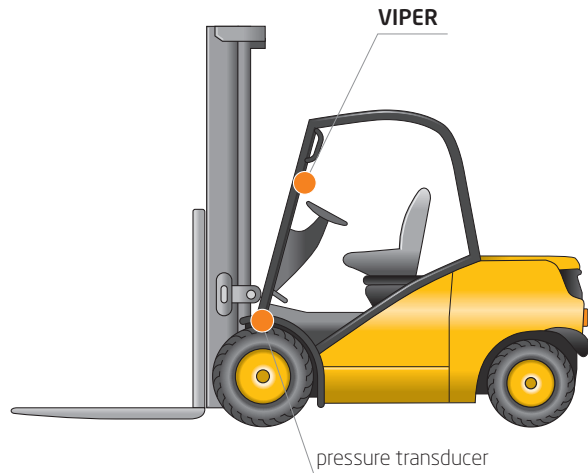

Power supply	18÷30 Vdc
Display	Back-lit LCD 2x16 characters
Reading	Net weight
	Totalizer
Dimensions	154x104x34 mm without flange
Protection level	IP40
Optional	Paper roll printer

## LOAD WEIGHING ON FORK-LIFT TRUCKS

VIPER is a weight control system with remarkably competitive cost, that combines great simplicity of use, good precision and immediate display of the weight of transported materials on all types of fork-lift trucks. A display mounted in the cab shows the net weight of the materials and the possibility to sum it to the total weight using a pressure sensor installed on the hydraulic lifting system. The weighing is STATIC: the weight is displayed when the operator stops the forks some seconds in a fixed point during the lifting.

Accuracy:  $0 \div 2\%$

## LOAD WEIGHING ON FRONT REACH STACKER

VIPER finds his typical application in harbors and container handling area where the accurated weighing is required, both for economic payload calculation of the loaded material. Our system VIPER allows to optimize the loading and to know the exact weight of the container.

Accuracy:  $0 \div 2\%$
