- Water touches every facet of our lives including drinking, cooking, cleaning, bathing, and washing.
- According to the Environmental Protection Agency:
  - Well water should be tested annually for Total Coliform/E. coli, Nitrate, pH and Total Dissolved Solids.
  - This testing should be done at a state certified lab.
- ABE Laboratories has been performing these tests for over forty years in the greater Lehigh Valley. Stop by for an accurate, lab certified water test.

- According to the American Academy of Pediatrics:
  - About 15 million homes get their drinking water from private, unregulated wells.
  - Studies show a significant number of these wells have nitrate concentrations that exceed Federal drinking water standards.
  - Nitrates are natural components of plants and certain fertilizers.
  - Although safe in natural form, they are potentially hazardous in the human body, particularly for infants.
  - Thus, the American Academy of Pediatrics recommends at least once a year testing.
- ABE Laboratories has been performing these tests for over forty years in the greater Lehigh Valley/Pocono areas. Stop by or call for an accurate, lab certified water test.

**\$5 OFF any nitrate/nitrite  
combination test**

- Lead in drinking water is a national problem. Lead in water is invisible and odorless. It can enter drinking water when pipes that contain lead corrode.
- There is no acceptable level of lead in drinking water, according to the Centers for Disease Control and the U.S. Environmental Protection Agency.
- Drinking water is delivered via 1 million miles of pipes across the US, much of them laid in the early- to mid-20th century.
- Testing at the tap using a certified lab is the best way to measure levels in household water.
- ABE Laboratories has been performing these tests for over forty years in the greater Lehigh Valley/Pocono areas. Stop by or call for an accurate, lab certified water test.

**\$5 OFF any individual lead test.**
