Bionic Healthy Home Filter

Polarized Furnace Filter
Technology

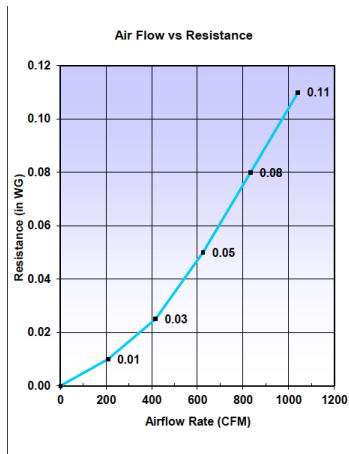

Green Solution

Energy Savings

The Bionic Cimatec air filter has significantly lower back pressure compared to high quality or high efficiency pleated filters.

Lower back pressure means easier air flow through your duct system. Therefore, your furnace does not need to run as long to cool or heat your home.

This provides a 8% - 13% savings in energy cost to heat or cool your home. On average an Ontario home can save approximately \$275 per year.

Verify Air Quality Test has tested and approved the Bionic Cimatec filter for a healthy home.

Owning a Bionic Cimatec furnace filter equals 12 planted trees

per year.

100% in-line central air filtration with near HEPA performance

Helps reduce airborne and settled pathogens, independently tested to kill airborne bacteria and viruses.

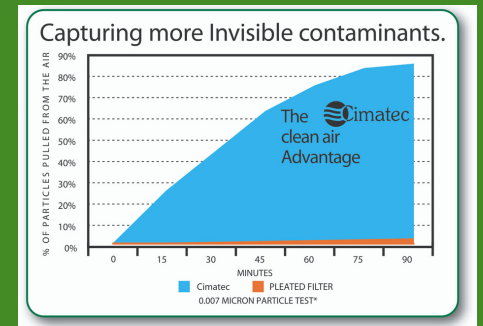

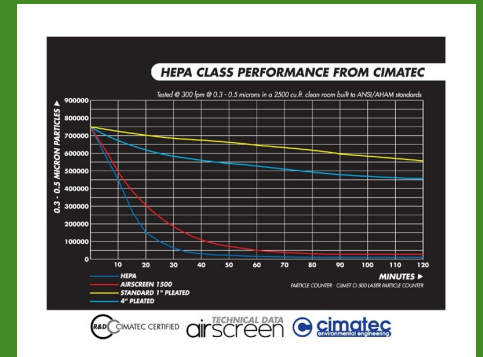

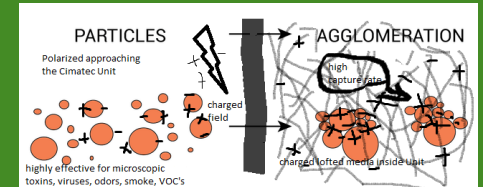

Low filter pressure drop saves an estimated 8%-13% in heating/AC costs.

Roughly \$275 per year

Performance

Better Filtration

The Bionic Cimatec air filter uses next generation polarized agglomeration to capture more airborne fine particulate, dust, mould spores, bacteria, viruses and VOC's than other pleated furnace filters.

Cleaner Indoor Air

Better furnace filtration keeps your ducts cleaner, removes more pollution from the breathable air, reduces settled dust on surfaces and provides a healthier home environment.

Helps reduce airborne and settled bacteria and viruses.

No noise, no ozone...just clean air!
