ELAM Network Audit Report

Maximize asset and associated LifeCycle Risk accuracy

Are you getting ready for a budget cycle, policy review or just want to understand risk management in your Cisco network estate with an audit level of detail and accuracy? Do you have information about your Cisco network in various sources?

Let our LCM Data Group experts put this data together, quickly and accurately, into an easy to understand Enterprise LifeCycle Asset Management Audit Report utilizing our data analytics approach.

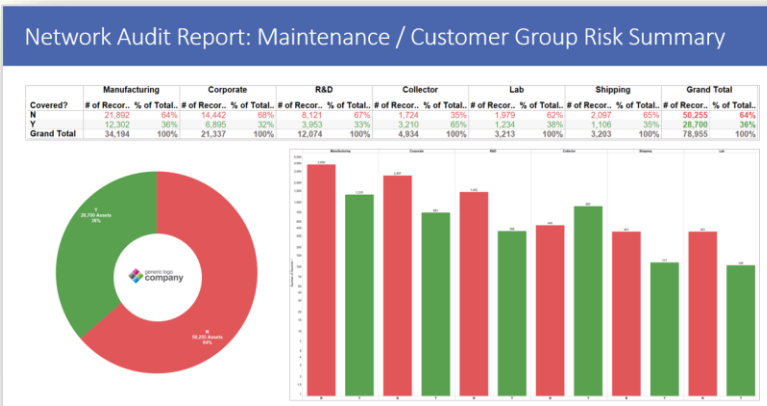

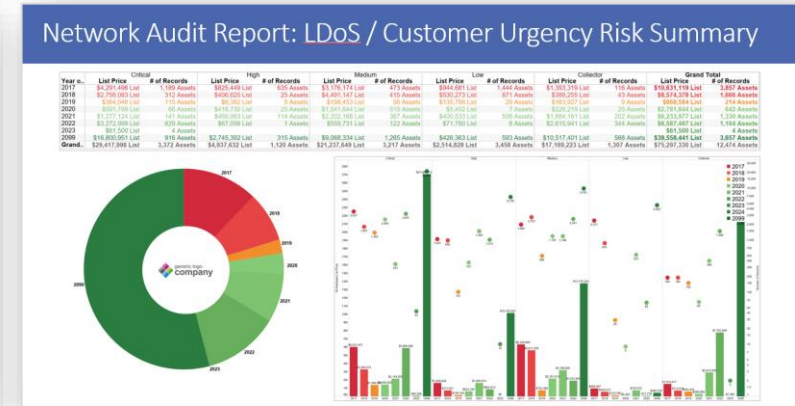

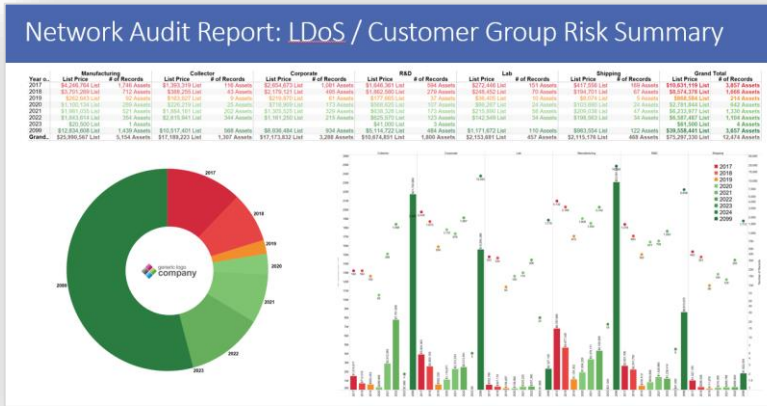

The ELAM Network Audit Report adds our Customer's internal asset information, from any available sources, to the ELAM Network Audit Report for a more accurate asset view and associated tracking and visualization of Customer specific LifeCycle risk.

Our **ELAM Network Audit Report** includes data, analysis and visualizations for:

- **Asset Analysis:** Per Geography, Architecture, Device Family, Device Type
- **Risk Analysis:**
 - End of Sale
 - End of Native OS Support
 - Last Day to Add to Service Contract
 - End of Application Software Support
 - Last Day to Renew
 - Last Day of Support
- **Maintenance Analysis:** Covered / Uncovered Devices, Contract Details, Coverage Policy
- **Customer Groupings:** Per Geography and/or Business Unit and/or Functional Area and/or....

Enterprise Analysis with Customer group analysis

Data sources that we analyze to create the ELAM Network Audit report include

- Cisco Analytics
- Cisco DevNet
- Customer CMDB Information
- Customer OSS / BSS Systems
- Network / Cloud device and system Reports
- Customer internal spreadsheets
- Cisco Collector Information

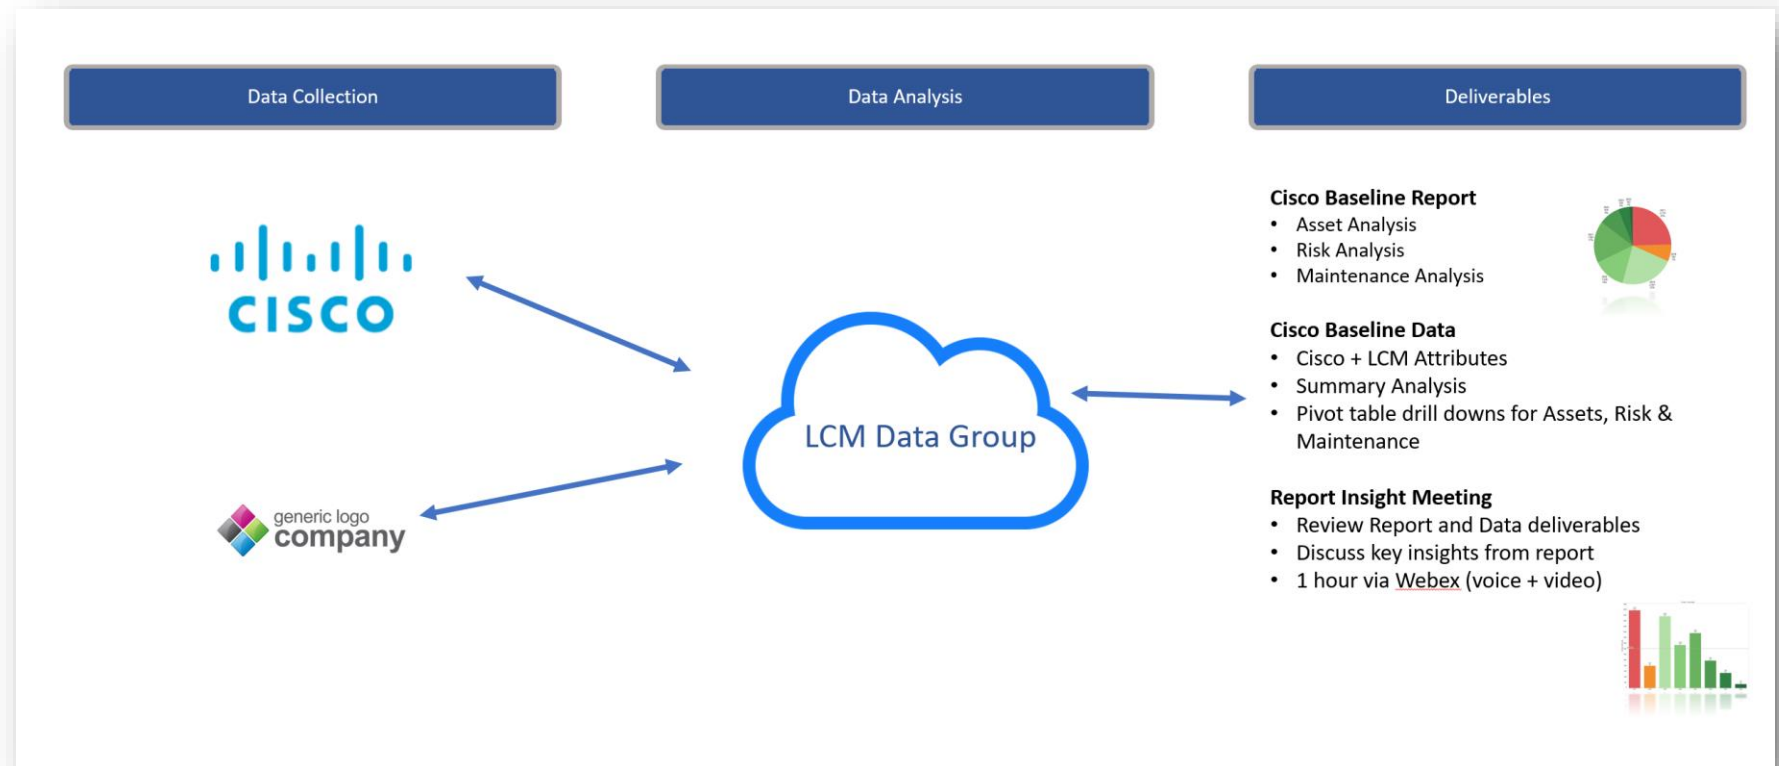

6 Weeks Process

- LCM – Cisco Template driven process
- 3 x 2 week cycles with iterative levels of analysis and detail
- Ample time to find relevant internal data

Deliverables

- Cisco Baseline Report (ppt)
