Virtual Asset Manager Service

Formalize, track & maintain your LifeCycle assets and risks

As your organization develops the processes to make data driven Enterprise LifeCycle Asset Management asset & risk decisions, the need for timely and accurate ELAM information increases. For those companies that want to move from On-Demand or Functional to Formal ELAM, the LCM Data Group Virtual Asset Manager gives you the ability to jumpstart the process.

Our Virtual Asset Manager Service extends your internal team. Utilizing our LCM Data Group processes and tools, your assets and LifeCycle risk is tracked and visualized on a regular schedule and cadence.

The Virtual Asset Manager coordinates with your team and data sources to ensure that quality and accuracy is part of a formal Asset Management process. We do the work so that you and your team can focus on formulating the strategies and plans to mitigate the LifeCycle risk.

Service Processes, Data Sources and Deliverables

Data sources that we analyze to create the **Virtual Asset Manager Service** deliverables include

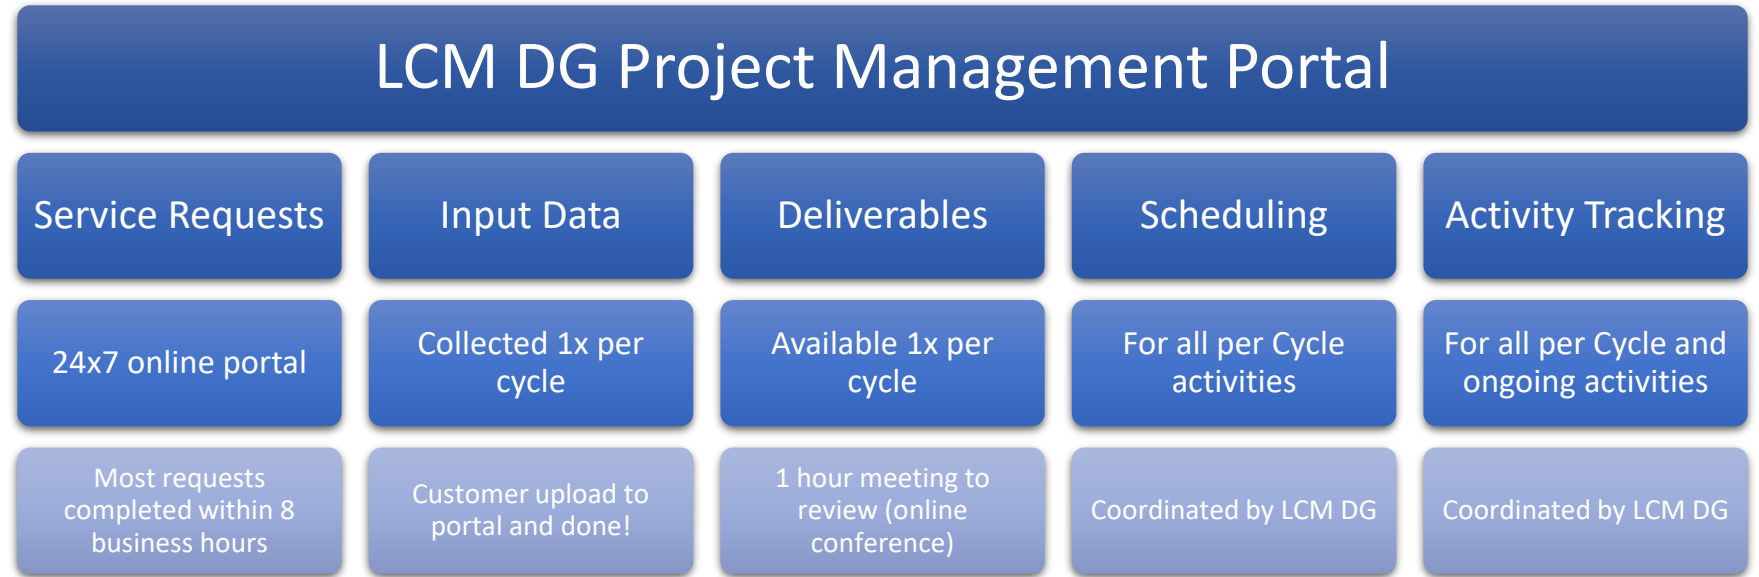

- Cisco Analytics
- Cisco DevNet
