# REPAIRS

---

When your forklift breaks down, trust us to get it back in action quickly and efficiently. Our technicians are equipped to diagnose and repair all types of forklift issues, from minor adjustments to major overhauls. Using quality parts and advanced tools, we ensure every repair meets the highest standards of safety and performance. With fast turnaround times and a commitment to minimising your downtime, we keep your operations moving without missing a beat.

# SERVICING

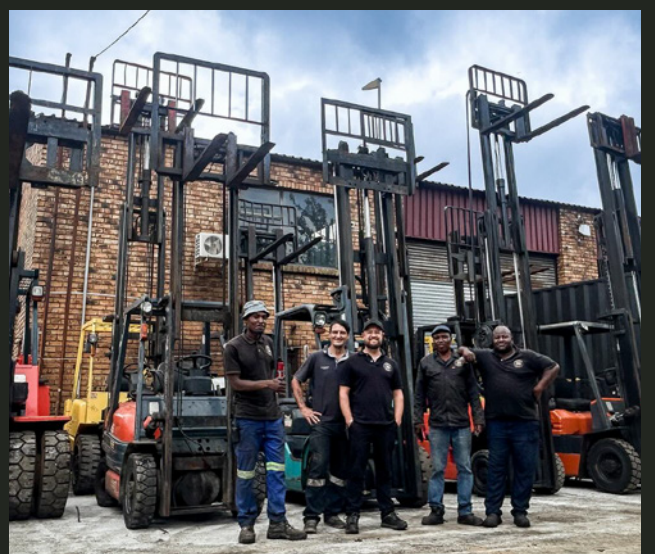

---

Keep your forklifts running at their best with our comprehensive servicing solutions. We offer routine maintenance, thorough inspections, and expert repairs to minimize downtime and extend the life of your equipment. Our skilled technicians are trained to handle most forklift makes and models, ensuring precision and reliability in every service. With a focus on safety and efficiency, we help your business stay productive and worry-free.

# SALES & RENTALS

---

We offer a variety of forklifts for sale and rent, tailored to meet a wide range of specifications and operational needs. Whether you require a standard model or something more specialized, we can help. Simply give us a call, and we'll send you our rental questionnaire to better understand your requirements. Alternatively, we can visit your site to assess your application and recommend the best forklift for the job. Let us provide you with the right equipment to keep your operations running smoothly.

# LOAD TESTING

Ensure the safety and compliance of your forklifts with our **certified load testing services**

We are proudly registered with the Department of Labour and the Engineering Council of South Africa to provide professional load testing, conducted by our qualified load test technician. Our comprehensive load test includes a full inspection of your forklift, evaluating everything from tyre and fork wear to verifying its lifting capacity against manufacturer specifications. We can perform load tests up to 10 tons (10,000 kg).

Our technicians use calibrated equipment to perform accurate assessments, providing you with detailed reports and certification. Prioritize workplace safety and meet legal requirements with our reliable and professional load testing solutions.

*Please note, a load test will not pass if any checklist criteria are not met. This ensures your machine is in optimal working condition for maximum safety.*

## TRANSPORT

At AA Forklift Services, we understand the importance of reliable and efficient transportation for your forklifts. Whether you need to move a single unit or an entire fleet, our specialized transport services ensure your equipment is delivered safely and on time. With professional handling, secure loading, and adherence to all safety regulations, we take the hassle out of forklift logistics. Trust us to keep your operations running smoothly, no matter where your forklifts need to go.

# REFURBS, REBUILDS & RESPRAYS

Give your forklifts a new lease on life with our expert **rebuilding & refurbishing** services

We restore older or worn-out forklifts to peak condition, addressing mechanical, hydraulic and cosmetic components to ensure they perform like new.

Whether it's a complete overhaul or targeted refurbishing, extend the lifespan of your equipment and boost its performance with our tailored forklift restoration solutions.

# TYRE REPLACING

## HOW TO CHECK IF YOUR TYRES NEED REPLACING?

### Tyre Size Examples New/Second hand

700 x 12

825 x 15

600 x 9

650 x 10

Contact us for more sizes and  
stock availability

**NEW &  
SECOND HAND  
OPTIONS  
AVAILABLE**

Replacing worn tyres is essential for maintaining the safety and performance of any machine. Worn tyres on heavy equipment pose a significant safety risk, reducing grip and making braking more difficult.

AA Forklift Services offers retreading and re-grooving services for secondhand tyres as a cost-effective alternative to replacement. We press old tyres off their rims, either replacing them with new ones or re-grooving the existing tyres to restore safety and efficiency to your machine.

**Provide us with the size of your forklift tyre, which is usually marked on the sidewall of the tyre, and we'll assess the best solution for you based on the tyre's condition. Let us help keep your forklift safe and efficient!**

Regular tyre checks are essential for forklift safety and performance. Inspect your tyres for visible signs of wear, such as cracks, splits, or missing chunks. Check the tread depth - if it's worn down or the tyre has smoothed out, it's time for a replacement. Flat spots, uneven wear, or bulging areas indicate damage that compromises grip and stability. Additionally, ensure the tyres haven't reached the manufacturer's recommended wear line or age limit. Keeping an eye on these factors helps maintain safe and efficient forklift operations.

Worn forklift forks can compromise safety and performance, so it's essential to regularly inspect them for signs of wear. Key indicators include visible cracks, excessive tip rounding, thinning at the heel, and misalignment. Forks that are bent, excessively worn, or have reduced length and thickness should be replaced. At our company, we supply a wide range of new and secondhand forklift forks in various sizes and lengths, ensuring you have access to the right fit for your equipment and operational needs.

## EXTENSION FORKS

If your applications require the use of extension forks, we can supply **2.4 and 2.8 meter** extension forks

Extension forks are an ideal solution for clients needing to load or unload a second or third stack where standard forks fall short. These extensions slide over the original forks, providing additional reach while maintaining stability and safety. They are easy to attach and remove, allowing for flexible use without the need to replace the original forks.

## MASTS

We offer a wide selection of secondhand masts and mast parts from **top forklift brands**

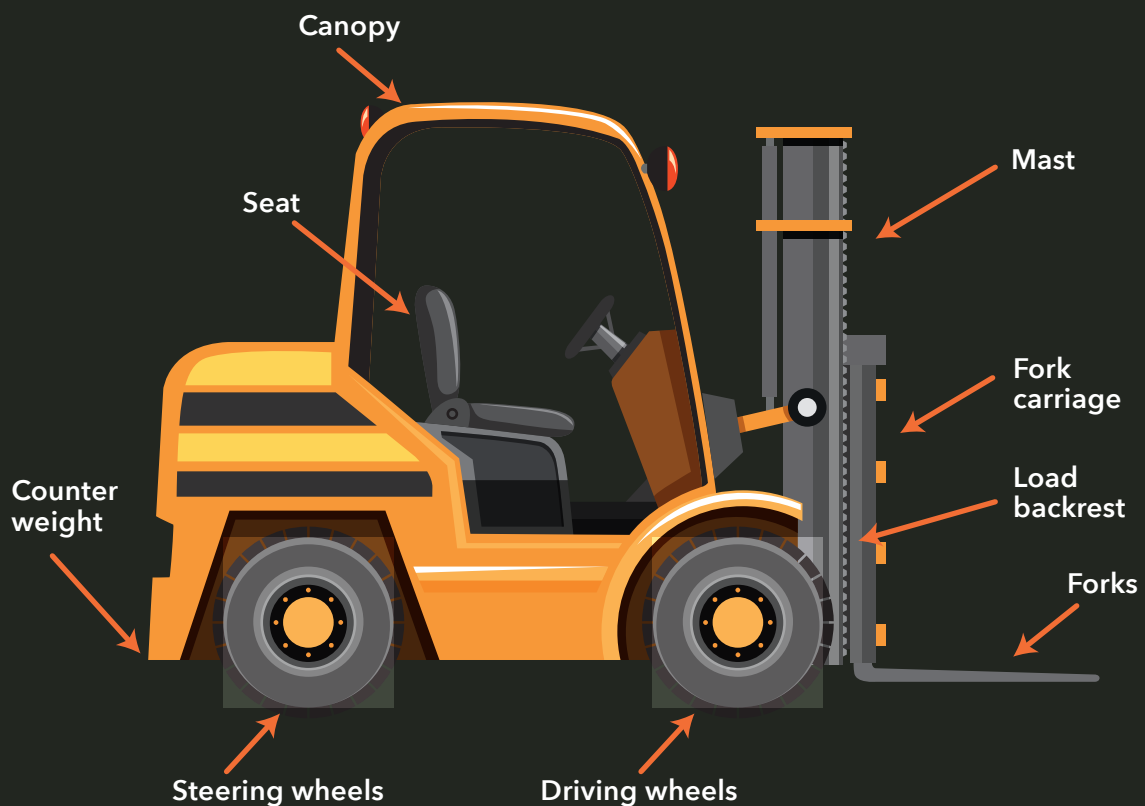

Whether you're looking to replace a worn mast or need parts for modifications, we may have a solution for you.

# BATTERIES

At AA Forklift Services, we specialize in providing top-quality battery solutions for all your forklift needs. Whether you require a new lithium ion or lead acid battery or expert servicing, we've got you covered. We work with trusted battery suppliers to offer new batteries for most forklift brands. Our battery servicing includes acid level adjustments for lead-acid batteries, helping bring their performance back to life by enhancing power and charge retention. Let us guide you to the best solution for your equipment—whether it's a replacement or service, we'll ensure your machines are running smoothly and efficiently, keeping your operations on track.
