

At age 13, Dazelle Peters found out she had leukaemia. A bone marrow transplant cured her cancer, but it also damaged her lungs. The hospital said (in 2024) she could not go on the transplant list unless she took four covid jabs. She refused, at which point the hospital offered her two choices: Die naturally or receive palliative care. Her reply, *"I'm not ready to die, it's not my time. Give me the transplant. If I die on the operating table, then at least I die fighting"*.

Every single day, injured drunk drivers, cancer riddled smokers, and known drug addicts, freely receive the medical help they need, without discrimination. It is disgraceful that sweet, young Dazelle was given this death sentence just because she did not want to take part in what is still a medical experiment. She fought for many, many months for her freedom to choose. The surgery could have saved her life, but at age 17, (10/06/24) Dazelle tragically passed away.

Dazelle was a brave, kind, creative, intelligent young girl.

She made her own decision about the shots, due to their shocking lack of efficacy, alongside zero long-term data, for potential side effects. Many people are already injured by that particular shot. See: www.lovecantstaysilent.com

Please share her story.

She is not the only one who has been denied life saving treatment, for this same reason. Winning her fight, will set a precedent for others, who are also being denied organ transplants. One day it could be you.

END MEDICAL SEGREGATION!
